Check for cold solder joints or loose components on the board in the modulation section. If you find any, retap the joints with some rosin-core solder (I prefer the silver-bearing type, others have other opinions).. if that doesn't fix it, take it to a tech who knows what they're doing...

Yes we do. Just drive any school and have a looksee outside. Making a meaningful dent in the wide spread violation of Part 95 rules here may need that same level of deterent used by some other countries in their "war on drugs", i.e. the shoot the dealers in the head. Dead dealers can't get out of jail, and or pay their fines, and get back in to business once again.

Unless they were within a few miles of one another. All of the illegal high power CBers would provide convenient cover whether they knew it or not.

>
> The occational skip conditions provide great chances to talk to their own
> country... if it just happens to be running right at the exact time they need
> it to.

I suspect they would use CB more for local communications than anything else.

> The fact that the band is available for anyone to listen to, and that 1000s
> of people will hear their messages must really make CB the ideal choice for
> secret terrorist messages.

Ask yourself how much you really pay attention to what you hear on 11m most of the time. How much of what you do hear really makes any sense most of the time anyway? Do you understand all those conversations, on the different channels, in a foreign language you hear too? We have over 250K people from the middle east living in Dearborn (south west of Detroit) and no small percentage of them use CB Radio. Finally are your really going to notice somebody sending coded signals that at first appearance seem like just another channel control freak jamming the frequency with some weird sound effects?

> The size of a CB and 1KW illegal amp must make them the perfect choice for
> hand-held use by terrorists while on a "mission".

More like a terrorist slinking around the airport grounds using a 4 watt handheld.

> What terrorist would want to use telephones, internet, e-mail, and "snail
> mail" for reliable, private, long distance communications, when they could
> use CB?

So they use all of the above.

They do prove a lot, don't they, Phil?

Did you notice that the emails from me were written on Pine from a Lynx browser? It's a text-based browser, and while it has a few drawbacks in that respect, it has great speed. And it also has a function that if you reply to an email that has a 'Reply to:' address that's different from the 'From:' address, it will ask you which address to respond to. That sends up a flag, Phil. Your forgeries were spotted from the beginning.

But how did I know it was you? Simple. The 'From:' field had the address voobner@yahoo.com, but the 'Reply to' address was the slightly different voobner_a@yahoo.com. A quick search on google turned up a post in alt.test using that addy, and in the header was your Columbus rr.com server. Not too bright, Phil.

So Voobner and I made up all kinds of stories just to get your goat. The decision to post that information publically was your's, Phil, nobody else is responsible. I have forwarded a couple of your emails and headers to Dwight, with a full explanation of what you did.

Ya know, it's real funny how you posted all over the ng how you had this irrefutable proof of Voobner's identity, even going so far as to say you had some sort of 'inside information' from AOL, and had done some IP tracing. But after repeated prodding for that info, it never appeared on the newsgroup, even after you claimed to have given it to others. I even asked, and all you did was beg for my driver's license.

Then you come up with this lame plan to forge email addys in order to get this information you claimed to have in the first place. Not only was the information false, it appeared rather quickly in the newsgroup as you spread the word to your buddies. It's very interesting how they didn't post the information you gave them earlier, but they sure jumped on the anti-Voobner bandwagon with -this- info (read: you are full of shit).

And now you are trying to rescue your own ass by making these ridiculous conclusions to less-than-forthcoming 'evidence'. For the sake of Dwight, I will make all the emails I have received from you, with headers, available to anyone that requests them, and I will even include the emails of you begging for my driver's license so they will know that you are just a pathetic, stalking moron trying to gain some acceptance from others in the newsgroup. And guess what, Phil, I even stand with the keyclowns on this one, just because what you did was so thoroughly decietful and warped.

Maybe someday you will learn to behave like a normal person. I don't suspect you will learn any time soon. I really don't care. Now just go away before you get into bigger trouble than you have already created for yourself.

Hey skipp, wouldn't it be a good idea to determine if the feedback
is audio or RF? Is the feedback heard on the receiving radio or
through the speaker of his own radio? And did you know that some
radios will squeal like twistie in a mud puddle if the mic is
wired incorrectly? Or did you call Miss Cleo and troubleshoot his
radio that way?

Hi Peter,

The elimination of licensing (read accountability) for the CB service in the
mid-80's. IMHO, it was the worst thing that could've happened.

Skipp, unlike most in this newsgroup, I openly post using my real name. Therefore, when false things are said in association with that name, it is a direct assault on my personal reputation (which I happen to value very highly). In the past, this has never been a problem. This is the first time I've ran into people who would so openly assault the reputation of a person they don't even know. Anyway, this bit of nonsense seems to be dying down now. When it finally ends, I look forward to getting the h*ll out of this newsgroup. Take care.

I am totally clueless about cb's. I have a four wheel aluminum pop up camper on a 89 f-250 ext cab . What type of antenna and where to mount it ? I bought a Uniden pc68xl and will use it in Baja with my 3 other friends as we go off road. Thanks for any help, also can we expect to talk to each other if we are 3 miles apart in hilly terrain ? I think the other 2 guys have old cb's.
Thanks

I did not post any claim that Voobner = Dwight. By your own admission you did start the rumor that Voobner = Dwight. Nice guy who will sacrifice his friends for the cause...

<blah blah blah>

> For the sake of Dwight

I wonder how Dwight feels about you setting him up and starting rumors about him Frank? Why would you do that to Dwight? Do you have something against him? What did Dwight ever do to you that would make you set him up like this?

<more blah blah blah>

>and I will even include the emails of you begging for my driver's license

What a distorted sense of reality you have, Frank. *You* are the one who contacted *me* begging *me* to send you the proof of "Aaron's" identity. When I asked you to verify your identity by sending a photocopy of your DL with the DL number and SSN blocked out, instead, you sent me a link to a court case that you were involved in. (Would you like me to make that information available to anyone who asks for it?) You even wanted to call me on the phone. You must have wanted that info pretty bad, huh?

Wow, with each post you confirm the assertion that you are indeed "Aaron's" Lackey.

Phil, What do you call this from your own post, I call it a claim by you:

"3. Aaron Voobner is indeed Dwight. Frank is now making a lot of noise to
try to cover this up. It is clear that Frank is "Aaron's" lackey. Could it
be that Frank slipped up in admitting Voobner = Stewart and now "Aaron" has
commanded Frank to clean up the mess? Is Frank now on damage control?

Yes, your reality is somewhat distorted. I don't believe begging is the word, you posted in this NG that anyone who wants to know aarons true identity to send you an e-mail. I call that solicitation on your part.

> When I asked you to verify your identity by sending a photocopy of your DL
> with the DL number and SSN blocked out, instead, you sent me a link to a

Do they have to send you a copy of there license for it?

>You even wanted to call me on the phone. You must have wanted that info
>pretty bad, huh?

You must have wanted there personal info pretty bad to ask for a copy of a drivers license.

Hi Jonas,
Try http://www.ac6v.com/antprojects.htm It's a ham radio page but just substitute 27Mhz in the equations.

Actually, you did... but hey, if you choose to ignore the quoted
material below the post, and can't remember what you wrote, that's your
problem.

27.185Mhz for the "center frequency" of the CB band in the US.. Not sure
what the frequency allocations are in Deutschland, though...

HI!

I am a newbie, so please explain this to me.

I got an SWR meter, it has a push button to switch from FWD to REF.

can/should I leave the swr meter connected when using the radio? which position should the button be in when I use the radio?

regards

Unless you take up a 75 meter lumbago net, it's all you will ever need.
Where in the hf bands are you limited to 200 in any case? You just passed
the test.

This is probably the best giveaway that we are dealing with the Resident Fanatic under another name: his decidedly female theory that there are two groups of Light and Dark and everyone is currying favor with one group or another. Even the girls usually grow out of this phase by 16 or so. Ever notice that when a female is on the outs with someone or something her entire entourage must do the same or be traitors. All men do is at worst quit buying the beer.

Although I have seen cases where the SWR meter caused the garage door to cycle, it should not make a big diff if any whether it is in or out and it does give you some indication that the kid just drove over the coax with your Lawnboy. Assuming you calibrated it in forward, leave it in reverse so that a high reading will give you a clue that something is wrong.

Not one of life's major issues.

Hi!

I have a wire dipole as antanna. I just dont really know how to mount it.

it's 2 265cm wires. do I twist them together? do I hang one to the ceiling and put the other on the ground? right now, I have one wire vertical and the other is on the ground, but not straight... if i put it straight, I get SWR of 1:3,5 if I kinda twist it together, I get 1:1,4...

The ultimate best solution is to have it hanging vertically from a Zepplin about 200 meters high with the feedline at 90 degrees for 20 meters or so before bending back to the station.

Now that we have decided that a compromise is in order: 1) preferably outside as high as possible but vertically with the feedline separated as much as possible. 2) if inside, it is permitted to bend the ends in opposite directions with the feed in the center, again running away from the antenna.

```
----------------------
|
|
|
|
0 FEED
|
|
|
|
--------------------------
```

Do not get worried about an SWR unless it reaches about 1,8:1. Your transmitter expects 50 ohms and these installations will normally run 30-70 ohms at the feed point.

Read up on 'folded dipoles' and 'folded tripoles'.

Feel free to e-mail directly. I am too long away from it to even attempt technical Deutsch.

Then what would you call it when your using a linear and talking to someone
who uses a legal radio, with no amplifier, within the normal 40 channels?

Semantics won't win you this war.

I would tend to say that knowing the person who designed, and the person who
built, it would be just as clean as
any amplifier throwing out a 45Kw signal, unmodulated.

So yeah, I would say that it was clean.

Once the signal was modulated, I won't guarantee anything. But we wheren't modulating it, we where going for raw horsepower.

> me on the phone. You must have wanted that info pretty bad, huh?
>
> Wow, with each post you confirm the assertion that you are indeed "Aaron's"
> Lackey.
>
> Phil C

1. You did indeed post the assumption that Aaron = Dwight just two
posts ago.

2. What I put in my private emails is nobody's business except mine
and the person to whom I am sending the email. You have violated that
privacy, so don't put any blame on me for starting the rumor - you
disseminated that information on your own initiative, not mine.

3. Regarding the driver's license:

I had sent you a link on a US Courts server where you could find my address and phone number. You rejected it because you claimed that you or anyone else could hack information to a public server, totally disregarding the fact that the information is contained in a Federal Court docket. I offered to call you to verify my phone number using Caller ID, and you rejected that without reason. Then I agreed to send you my dl, but on one condition: since you are able to hack information on a public server, and I was supposed to send my dl to the address for you on QRZ, I demanded that -you- should verify -your- address by sending me -your- dl first. You never replied.

As I said before, I will be happy to provide the entire email exchange to anyone that requests it.

Now, Phil, you have a choice to make, and I think you know what the choices are. If you don't, let me know and I will spell it out for you. You agreed not to disclose my information without my permission, but you ignored the fact that I will provide that info to anyone that requests it via email. You hold -nothing- over -my- head, Phil. Do you really want to keep playing this game?

Yes, majority does rule.

And it seems the majority on this newsgroup think your fulla shyte, and would like to continue to talk about amplifiers.

However, even the "majority rules" doesn't need to apply to a UseNET newsgroup, when it is unmoderated, as rrcb is.

It's too bad you have Aaron in your killfile because a few days ago
he posted a list I compiled of all the licensees between 26 and 28MHz.

Considering the sane part of the planet has Aaron in the killfile, nothing
is lost.

I hope you did not list Violet Communications everything license and the
experimental permits.

4151. salutations to all, and a special msg to ICECOLD from WebDoc now in NYC

Newsgroup: rec.radio.cb
Date: 2001-11-03 21:26:48 UTC

Message-ID: <de9751ca.0111031326.3bd7144b@posting.google.com>
Source record: 103314

Well just wanted to let everyone know that I am still alive and doing well in NYC, I've been here exactly one month now, and will probably be here at least another month. I had the pleasure of speaking with Bert the other night over the phone, it was kinda cool to be able to place a voice with the name.

A little update, I was fortunate enough to be asked to attend the memorial ceremony at ground zero last sunday, this enabled me to pay my respects to the brave men who will forever be anwering the call to duty, as well as their compatriots who are still with us today. One of those men, was the gentleman who was one of my training officers when I was studying to be a paramedic many years ago.

Hey ICECOLD, I was able to get a better understanding for what you went through, as I was stationed by the entrance to the Century 21 bldg, that you mentioned when you were relating your experiances with us, all I can say is that I am glad that you are still with us.

If anyone wishes to contact me, use my normal email I can now check it from here at the Red Cross HQ, my email is arcweb@bnnortn.net.nospam remove the .nospam to send email.

73's to you and yours from me and mine.

I am beginning top think that you are just dense Frank. I did not say that you could hack into the server and place that information there. I said that just because you sent me a link to some court docket with the name and address of Frank G. doesn't prove that you are _that_ Frank G. If I send you a link to qrz.com with my callsign lookup in it does it prove that I am Phil C.? No.

Source record: 103317

on your meter theres two switches..one says fwd and ref....the other says pwr and swr.to check your swr reading set the first switch on fwd and the other one to swr.then key down your mic. keep it keyed down.with it keyed you need to adjust the knob on your meter so it puts the needle on the SET position.with it still keyed reach over and flip the switch that says" fwd ref" to the ref position.look at your meter now...thats your swr reading! it should be under a 2.preferably lower but a 2 is allright. as far as leaving it hooked up....it dont hurt nothing as far as cb performance.

Dear Mr. Voobner,
We regret to inform you that your recent application to join the
American Eagle SSB CB'ers Club has been rejected. After a lengthy
thought process, it was determined that you are not quite 'cut out'
to be one of our members. You are welcome to appeal this denial of
membership, and you may re-apply at a later date if you so desire.
Additionally, please let Mr. Gilliland know that we are curently
scrutinizing HIS application too, and as of this time his membership
prospects look pretty grim too. In closing, might I suggest that you
look into another club to join, such as the "We hate CB'ers Club."
Again...my sincere condolences.

Hello Jonas: Richard's blurb there is a good one.

Its no big deal to have the SWR meter in line and left there. The point of having it there is to keep and eye on the antenna performance SWR wise. You should notice a small increase in SWR as it rains, and the winds blow real hard, moving the antenna around a little.

I had a intermittent electrical connection in a Sigma 4, 3/4 wavelength once. I noticed that when the wind came from the East I could see a sharp increase in SWR. Adding screws with lock nuts and more hose clamps, to antennas feed feed system, and tighten the piss out of everything I finnialy fixed the intermittent electrical connection. I bought a used Hy-Gain Penetrator 500 and replaced the Sigma 4 junk pile of aluminum tubing communist BS. ....

.... Ah buts that another story ....

Hello Srbaja: I would suggest the Wilson 1000.

It can be mounted on a "L" bracket, and attached with the metal screws holding the camper together. The Wilson 1000 has a whip antenna about 50 inches or so that will not take out low lying florest lights at the gas station. And work pretty well.

Hey Steve, don't ya think a "mobile tube amp" is inappropriate (and if
it covers 24 to 32 mhz, illegal) to advertise for sale in a CB
newsgroup?

-Aaron-

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture,
sell or
lease, offer for sale or lease (including advertising for sale or
lease), or
import, ship, or distribute for the purpose of selling or leasing or
offering
for sale or lease, any external radio frequency amplifier or amplifier
kit
capable of operation on any frequency or frequencies between 24 and 35
MHz.

Too funny. BTW, isn't operating on 27.395 LSB, a federal crime? Why? Because I saw so...it is...it is...it is... :-D

Guess allot's happened in a week or so, huh?

I don't care what you do at the Hamfest Morpar. As a matter of fact since Riley Hollingsworth will be speaking there, with a local FCC group of field agents in tow, why don't you and the rest of the 11m pirate gang invite him out to see your mobile setups in the parking lot? I'm sure he would be so impressed he would be happly handing out "prize tickets" for every modified radio and amplifier he saw for 11m. 8-))

Hey man, I just go where a cynical-chic grandpa type can get a little
recreation. I am quite content to leave the preaching biz to Gene Scott.

FWIW just got back from a klatch with a bunch of greybeards one of whom is
even a Lifer Tech, the second one of the day. We hang on 12 or 17 these
days.

It's a hobby, man; some of us don't need to tilt windmills for fun.

Hello Steve: Man does that old amp bring back memories, big time.

One of the old guys, handle was Buck Shot, had one of these older Black Kat mobile amps installed in his 1966 Ford Bronco. It was mounted just underneath the dash. It had a great sounding audio, and you could hear the high frequency "Buzz" of the power supply in with the transmitted signal.

Not much of a terrifying signal, in the old days but Ray (Buck Shot) was celebrity having a linear amp in his truck, and everyone new it. I also think his Hillbilly style and social demeanour was also attractive in a sense that you got what you expected from Ray, by his looks and the way he talked over the radio.

One late evening I was driving up the main road in town, and I saw a Police car near Rays house, with Ray holding a shotgun. I pulled over and asked ray what was all the hoo raw was. The Police told Ray to stow the shotgun, which he did. I was standing on Rays side yard with a bunch of the locals being held behind the Police car. Ray asked that I stand fast, and move over a few inches, then I see a gun in the grass, Ray wants me to stand on it hiding the gun. But the Police tell everyone to go home, and break it up. Rays wife stands right next to me hiding the gun. Everyone goes home.

I tell Ray, well looks like the base amp is working ah?

Ray just looks over at me and shakes his head up and down, he picks up the gun and goes inside. I take off and go home myself.

After all that we would blame Ray for all kinds of things over the air, but nobody wanted to go over to rays house and discuss anything. I laugh.

Jay in the Mojave

Wrong. They shoot them in China, not Cuba. You never heard about the Opium Wars in the early 1900's in China? Cuba supports the drug trade as a means to destabilize the US government and to earn hard currency it needs for import and export trade.

And some day when we develop the sense God gave the average billy goat, we will take up a program including cut-rate supply and treatment options to deprive the depraved of a market.

I would suspect that a Cuban getting addicted or selling to another Cuban is in a world of hurt. Getting shot might be preferable to life in the nickel mines.

I could not find any reference to your 1640AM work on your sites link
pages!

Also, I now remember speaking to you before - Kewet electric cars.

Are there 'ANY' commercially made low power (up to 100w) AM transmitters
that use Pulse Width Mod?

I really would like a non iron AM tx and do not like going the low level
and or linear route.

Any ideas?

Phil / London

So are you saying that field days and QRP contests are idiotic?
How about fox/beaver hunts? Those all take quite a bit of skill.
Have you ever participated in any of those "idiotic" contests?

Since rrcb doesn't have a charter, majority doesn't rule, the rules are governed by the topic of the newsgroup, and that's CB radio. Like I said before, you can take over rec.basketweaving with a majority who want to talk about amps, but the subject is still off-topic.

Now if you still want to claim 'majority rules', where is the vote count? When was the election? There are lots of people that lurk, how do you know what they want? Did you call Miss Cleo? (She sure does get a lot of business from the keyclowns!)

CW is A1 "you idiot". And many CW rigs use amplitude limiters in
or near the final. These are used because large sidebands can be
generated from hard keying, poor power supply regulation, or by
over-driving the final. These limiters are usually clamps that
serve double-duty, "you idiot".

"Lackey"?

OK, if this conversation has degenerated into name-calling then maybe it's time for you to seriously evaluate things, Phil. Frankly, I'm astounded at what you've been up to lately. First, there was that episode where you got all riled up and started hinting I was Paul, K5PF. Then you got obsessed with the idea that I was Dwight, W5NET. Honestly, no one in this NG knows who you'll point the finger at next. It's strange, it's bizarre, it's sort of vaguely entertaining at times, but in the end, it is just plain delusional. Look, I'm not saying YOU are delusional Phil. You seem like an intelligent person with an excellent facility for research. I'm saying some of your recent BEHAVIOR is delusional. What the hell is going on in your life to cause this to happen?

I assume you consider yourself among the higher grade hams and old
heads. That's OK by me. As a spokesman for this group, maybe you can
answer some questions:

You've "written off" Leland Scott? How come? What was his "offense"?

And Dwight Stewart? You've "written off" him too? Why? What did he do?

Message-ID: <3BE4B4D1.743B8D21@qnet.com>
Source record: 103102

Hello Dick: Yes "structural bitchkitty" .... Ten-4.

The Delta Loop antennas I worked on and help install, didn't impress my "super CB'er" taste for excellence. The strength to took to hold the mast in place while someone else tightened the mast to boom bolts, was not a big Ten-4. And the performance was way less than impressive. I double checked all the dimensions and all, just as the assembly manual said. Perhaps I did something wrong.

A few months later the guy got a PDL-II two element quad antenna. I tried to avoid another wasted Saturday working for free, but it turned out much better.

The PDL-II had much better gain and rejection the did the Delta Loop Antenna. Way more good stuff. If you play with a two element quad antenna on Eznec, you will see that spacing the reflector element close to the driven element that the gain is still good, and it has some serious rejection, in the neighbor of 30 dB, thats great! Also the impedance is very close 50 ohms. And we all know that Impedance or ohms is the ratio of voltage to current. For every 50 units of voltage we have 1 unit of current, at 50 ohms of impedance. Ain't that neat!

This is one reason, a very good reason the the PDL-II quad antennas worked so well. They have what is called a Induction Impedance Matching system that allows the antenna to have both vertical and horizontal polarization. Two separate coaxes coming from the antenna, to a coax switch. This was said to not be a true quad antenna, because of its broke up driven element, for the impedance matching circuit. But it sure worked like a charm. If you look at the Signal Engineering Quad Antennas you will see something close to the PDL-II matching skim, I believe. Anybody know the difference?

Its truly amazing why the Amateur Radio (old fart hams) didn't pick up on the Impedance matching technique, that allowed both vertical and horizontal side to be used. On my Moonraker 4 element beam, it was snap to have both polarities, because it is just a cross Quad-Yagi Beam Antenna. But the PDL-II, someone was earning their pay that day they designed the impedance matching circuit for that one.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

Wow. So let's just say Phil C, (or whoever) were to successfully drive
me off rrcb. Who would be next? Leland? Surely he'd be on Phil's
"investigation" list because he dared disagree with the ideas of Toll
Free (hi-power) and Twistedhed (freeband operation). Guess he'd have
to go. Course, Sparky would be on the "investigation" list as well
for his "crimes". I suppose anyone who rocked the boats of outlaws,
pirates and scofflaws would be subject to one of Phil's
"investigations".

Not a pretty picture, Bert.

My opinions must be pretty "dangerous" for an even-tempered guy like
you to approve of Phil C's cockamamie actions.

The key to newsgroup peace "Aaron" is for the Hammies and those
such as yourself to let the CB'ers have their discussions regardless of
topic...
linear, freebanding, exports, etc., without the cute little "reported to
fcc"
"reported to ebay" "the fcc says this" "the fcc says that" "illegal to use"
messages.
That "Aaron" is the key to NG peace.
Of course, that would be impossible for you to do, since you have no
life, and you get your nuts off trolling this group and trying to piss as
many off as you can with your childish games.
Mr. K
PS. How many times someone posts is irrelevant.

SNIP>
"Voobner" said....
So the key to NG peace is not to repeat stuff over and over? You mean
sorta like those threads that go ON and ON about "whose illegal amp is
louder" and "whose illegal box is better"? Would those be OK with you?
Or would they be allowed one post only?

-Aaron-

Um.. I don't recall reading anything of that sort on this NG. I do remember reading several technical discussions of amp theory comparing one amp to another, etc, but those discussions were theoretical in nature, and not a "bigger penis" contest... At least that's how I read them...

Unfortunately, "voob", you tend to put your own spin on whatever you read, and then exaggerate that spin in your posts, simply to cause hate and discontent, making you no better than the idiots that do that very same thing on the air. You're no better than the people you're preaching at.

But of course, that's just my opinion.

FCC?

Check a frequency chart.. 27.395 = channel 39. it is.. .it is....

Guess alot's fallen out of your head in the last week or so, huh?

Fictional "Aaron H. Voobner" voobner@yahoo.com wrote:

> >What the hell is going on in your life
> >to cause this to happen?

<blah blah blah snipped>

> My opinions must be pretty "dangerous" for an even-tempered guy like
> you to approve of Phil C's cockamamie actions.

Your opinions aren't dangerous (or even original) - it's your actions that are, in your words, cockamamie. If you feel that your opinions are so important then why do you hide behind the false identity "Aaron Voobner"? So you can post Part 95 for the 10 millionth time? And talk about someone that is disturbed - who else but a disturbed person would go through the trouble of creating a whole web site as well as creating a fictional family for your fake "Aaron Voobner" character? LOL!

You weaken the anti-illegal arguments of people such as Leland and others who post their opinions under their real names. Speaking of which - Leland posts his opinions under his real name, Frank posts his opinions under his real name, why do you have to hide behind the fake "Aaron Voobner" character? Is it because you don't have the guts to post your opinions under your real name? Continuing to post in rrcb under your false identity is a detriment to your "cause" and eventually the others whose opinions you supposedly share will figure this out (if they are smart) and distance themselves from you. If they don't want to be taken seriously they will continue to align themselves with you.

Could it be that you don't really care about illegal operation on the CB band and you are here to get any attention for yourself that you can? You seem like an intelligent person. What the hell is going on in your life that has caused you to hide this intelligence behind a fake character? Is it an inferiority complex of some kind? If you want to be taken seriously then drop your disguise... otherwise you will continue to be thought of as fake "Aaron Voobner" the disturbed rrcb resident clown...

Au contraire, Phil. You fail to consider that it might all be
authentic and I am who I say I am. Just because you can't find my name
listed on the rather limited records you have access to doesn't mean I
do not exist. It's not my fault you do half-assed research, is it?

Or could it be that you have spent close to a year trying to convince everyone here that you are "Aaron Voobner" that you now believe it yourself? LOL! How pathetic. How many people on rrcb do you think actually believe that your real name is "Aaron Voobner"? Let's see how many people, who post under their real names, come out and say that they honestly believe this.

And so you will continue to be the fictional "Aaron Voobner" the disturbed rrcb resident clown.

Yeah, that was a real tempting deal. They send you a copy of their
drivers license in return for "personal info on Aaron Voobner". Jeez,
I wonder how come nobody in the NG took you up on it?

Hey, I got an offer for ya, Phil. Send me a xerox of your credit card
and I'll mail you a whole bunch of "inside info" on what the saucer
men are doing to Twistedhed while he sleeps :)

Nope, no experimental or IBFS licenses were listed, just ground-mobile.
Knowing that many freebanders open up their mod limiters, I'm sure
many of these licensees experience quite a bit of interference. I have
contacted a few and they thought the interference was because of other
-legal- radio traffic. Because of the CTCSS it doesn't bother them
locally, but it sure messes up the repeaters. Maybe these freebanders
like twistie are really getting their barefoot DX from commercial

repeaters -- that's being investigated now.

Again, Jay, CB is a single band while the ARS is a multiple band affair. Both the Moonraker and PDL-2 were known and well reputed but were great solutions to a problem most amateurs do not have.

Fifty ohms was selected for power transfer, it is not arbitrary. I am not too sure I want to deal with 28 ohm coax anyway.

The only Delta Loop I really got into was a cheesy affair that had been beaten to the point where it had diodes in it that really did a head dance on the neighbor's TV set. The owner was less than happy when we told him his antenna was at fault, call a priest and hold a burial.

Doubt if repeaters are even legal in 11 meters.

4216. Re: Hams Showing Off Amp Theory To CBers

> talk outside the assigned 40, it's not CB anymore.

I hate to say it, but I do not totally agree.
The term "Citizens Band" refers to a set of frequencies, anything within those freqencies is CB. Rules such as equipment type, power level, etc. are the conditions under which you may use "Citizens Band" frequencies.

From my dictionary...
CITIZENS BAND: a range of radio frequencies for use by the public.

If the frequency being used is within the frequencies allocated for public use, then it is CB. Using the CB frequencies with equipment not allowed on those frequencies is illegal, but it is still on the Citizens Band.

On the UK CB newsgroup, there is often talk of SSB, AM, and Packet. All these things are presently illegal on UK CB, but as so many would like these things legalised in the UK, they are all considered CB topics.
There is nothing wrong with wanting rules that you believe are unfair to be changed, whether you want rules to be relaxed or tightened.

I agree that there are groups specificly for swapping and selling, and it may be more appropriate to use those groups when selling etc. But rather that fill the group with whining and complaing, I ignore the "For Sale" posts, and block those who use this ng purely as a selling tool.

Personally, I do NOT use illegal equipment or frequencies, but I do not harass those who do. If someone causes inteference then I will let them know, and even offer help. If they are not bothered about curing the problem, then I have no problem with reporting the matter. But I see no point in continuing an argument, or bothering someone who is not causing problems...
If it aint broke, don't fix it.
Don't you just hate it when the Police sit on street corners watching the traffic go by, and pulling people over just to see if they have broken a law?

Regards.

Brainbuster.

>>some digging?
>
>So you approve of the persecution of innocent parties (Dwight W5NET,
>Paul, K5PF)? The end justifies the means?

Aaron, stop talking about other people. This is about YOU. To the best of my knowledge, neither Paul nor Dwight "flood-posted" Part 95 clippings ad-nauseum. I didn't see them jump into other's discussions, to any great extent, either. They also happen to stand (not hide) behind their words.

>>If you have a genuine interest in promoting legal operation on

>"investigations".

Aaron, why are you focusing on others? This is about Aaron Voobner, the guy who asked the question, "What the hell is going on in your life to cause this to happen?" The others you mentioned may disagree with others during the coarse of a discussion, but they don't beat a dead horse. That's called "trolling" in case you're unaware, Aaron. So stop asking "what about them?" and try owning up, YOU brought this on, Aaron.

>Not a pretty picture, Bert.

No it's not.

>My opinions must be pretty "dangerous" for an even-tempered guy like
>you to approve of Phil C's cockamamie actions.

It was never your opinions, Aaron. It was your NG tactics that has you in the spotlight. Everybody gets their fifteen minutes, Aaron. It's what you do with them that counts.

Are you talking about mounting it on the side of the camper,below the
seam where it pops up ? I have an aluminum square tube rack on top of
the camper,and could put it on top of one of the square tubes ?? Or
Put it directly on the aluminum roofing, and leave slack in the cable
for when I pop it up ?? Thanks a lot for any help

I am a newbie of course, just got a new uniden pc68xl, am going to
get a wilson 1000, should the antenna be ok out of the box ?
What is the meter on this CB for ?
What is the worst range I should expect for this setup, lets say even
without tuning it , if my friends have similar setups, and we are in
hilly terrain ?
Thanks a lot to anyone who can help.

I never said that your reply was to Bert, but it did refer to Bert...

You said:
> > Yeah he could prefer to remain anonymous and post from google
> > like you.

As "sd jones" was replying to Bert, you was replying to "sd jones", and "sd
jones" is the "you" of the post, the "he" can only mean Bert.... So I said:
> But as Bert just wants to be able to "killfile" the messages he has
> no interest in reading, anonymity is not the issue, and using
> Google would not achieve his goal.

If you cannot understand your own posts, and the replies, you may have to
step aside and let someone else take your place as "Ceo" of the "AKC" ;~)

Regards,

Brainbuster.

A closed mouth gathers no feet.

Hello Sr. Baja: Yes you can mount the antenna on the side of the
camper, on what ever will hold it. I have done so on my camper, and
works like a charm.

This type of installation will throw more energy towards the greater
surface area, of the camper, but won't be noticed normal use. Very
insignificant.

Yes again also have a small amount of coax as a service loop, allowing
the camper to go up and down. I had a Alaskan Camper that did all that,
it was great.

Bert, for a guy that trys to come off as a sensible guy your starting to worry me. Let me ask you this, would you like to be blamed in another NG for making post that you didn't ? What do you think is happening to Dwight? or Paul?
Lets assume for a moment Phil has these special powers which we all have found out are bs anyhow but lets assume he gave us the "cough cough real name of aaron voobner What happens next? Does he have to fear for his life? Are the keyclowns gonna put out a hit on him like SD Jones has stated? Will he be hung in the center of the next keydown? Will his name and phone number be posted on the shit house walls ? What is the end result? What is it all going to prove? Is there a reward being offered for this info?
Please answer the questions 1 by 1 so we all have a grasp of what is happening or going to happen. Step up to the Mike it's your 15 minutes what will you do with it?

Hello Sr. Baja: Yep ya can.

You should be able to adjust the Wilson 1000, say in the middle of its adjustment length, and be ok for a while.

But it is suggested you have someone with a SWR meter or bridge, (same thing) take a look at your SWR, and adjust the antennas length for minimum SWR. It only takes a few minutes, and once you shown how simple a store bought antenna can be tuned for Minimum SWR its a snap.

You want the SWR to adjusted to the Minimum SWR especially if you use a linear amplifier.

Hello Silly Guy From FL:

Contact the boys over at Standard Communications, I am sure their on the net somewhere, and ask them about the model number you have.

Also there are usually a lot local radio communication shops that can probably tell ya all about it.

> > Good.
> >
> > Turn power on, and there is a dead (as in not even 1 ohm, I mean DEAD)
> > short to ground...

If the "short" is only when the power switch is on, this would suggest that the damage is not just the diode (the diode is connected before the switch).

The short is likely to be the audio amp IC, an electrolytic capacitor across the supply inside the radio, or both. If the power was reversed, the diode may be "open".

1. Look inside the CB for an exploded capacitor
2. Disconnect the supply pin of the audio amp, and check again.
3. Check that the diode is not "open circuit".

Checks:
Always check for the "short" with the meter before connecting supply.
Make sure the correct fuse is fitted before connecting to the supply.

Hope this helps.

Brainbuster.

Hello Dick: Good reply.

I believe that if one read up on the transmission line transformers, and such, a standard 75 ohm to 300 ohm TV type transformer could be rewired to allow low power operation on a folded dipole antenna. Or even give it a go as is.

Yeah why not just use RG6, 75 ohm coax and the TV transformer, and folded dipole antenna. The folded dipole can be the 300 ohm twin lead TV type transmission line, shorted on the ends, and one side broke open for the feed connection in the center of the twin lead. More food for thought?

All the stuff is at radio shack, even a F Female to PL-259 adapter connector can be had there. Rock & Roll!

From: Toll Free (tollfree@bigradios.com)
Subject: Re: Opinions on Davemade
Newsgroups: rec.radio.cb

My, my, my... Looks like the DaveMade boys have themselves a little punk now, doesn't it?

I always thought Dennis could fight his own fights, and he always has... Does he pay you for the shit you spew, or do you do it for free?

I prefer to think that you do it for free.... I wouldn't want to lower my opinion of Dennis.

> "Toll Free" Why do you even get involved with these messages

Because I have been around here, put up with the wasted bandwith and have to listen to Dennis bitch about how Danny "stole" the secret DaveMade recipe at least once a month.

It is like a broken record.... It got old nearly 6 months ago.

I like Dennis, always have. That doesn't mean that I have to agree with the way he handles DaveMade / X-Force battles on the public forum of rec.radio.cb.

any way I never
> heard of any product with your name on.

Then you haven't been on the west coast or the south much.

I don't do the competition shit much anymore, but you ask the bigger stations on the west coast (Skipshooter, BigBamBoo and some others), and they will know who I am.

Your insignificant. You know a couple people (and I am giving you the benifit of the doubt here... I really do believe that you know Dennis, and that is about it) that make DaveMade, and that is about it.

Great. I know the same. Now what?

I know your thinks the same about me

No, I think absolutely nothing about you. I feel that you are a pile of crap, who cannot spell, puts a bunch of lies out their and decieves others.

Yep, that about sums it up.

No, wait.... I believe that if Concrete Man told you how to blow your nose, you would listen, and do it.

> but I Am a Dave Made user and was for a very long time.I use nothing but
> Dave Made and that is why I put my two cents in what is your excuse?

Great. Loyalty is nice.

What is my excuse?....

Excuse for what? For my comments?

Because I was one of the oldest people on this newsgroup. At this time, Bill Eitner and Brass Monkey are about the only people out here longer than me. Concrete Man and I have been about the same, I believe. Therefore, I can post what I want, when I want.

So can you, even though half the time you don't know what you are talking about, have no idea of the reality of the world, and are just a stupid kid with a pocketful of change that has found a manufacturer that is more than willing to trick him out.

Yes, what you have been told will work, but not to peak efficiency, and why half step?

>
> Your site links to Dave made and you talk all this shit about them?

Yes, I do link to DaveMade. Who gives a shit.

I talk shit about DaveMade?

No, I don't think so. I talk down to people when I feel that they are opening their mouth and inserting their foot, and more than once I have bagged on Dennis for the way that he is handling the X-Force fiasco.

It is old news, and should be dropped. Everyone knows what is going on and who really cares anymore? But, people shouldn't have to have dirty laundry run across rec.radio.cb a couple times a month.

And FYI, I also did the same to Steve at ExportsRUs over the way he handled the shit about dropping DaveMade. I was the person that got Steve and Dennis together, and then had to watch as people acted like little kids.

I don't hold anything back. I don't care who you are, or what you do in this industry. If I think that you are acting like an asshole, your going to be told that your acting like an asshole. At least nobody here has to figure out which asshole my nose is planted in... Something that was self evident with you!

I don't
> get it every since I posted those emails you sent you totally changed the
> way you talk about concrete.

No, it totally changed the way that I felt about you. Made me realize that you don't have the education that you think you do... At least, you don't have the emotional side of it down.

You remind me of the little tweaker who packs his nose, then goes on a shit rampage.

And true to what I say, about the same time every week, you go hell bent on the newsgroup with more shit.

Gee... Put two and two together and see what you get.

I care less what you, Dennis, Danny or anyone else thinks. If they can't see that someone who speaks their mind, TRUTHFULLY, is someone to listen to, then so be it. However, I don't think that Dennis and I have any irreconcilable differences.

When Dennis has a problem with something I say, he is more than welcome to call, come by, email or whatever me and we can talk about it then. So far, this has yet to happen, which leads me to believe that Dennis is more mature than you, and can have a disagreement with someone and then let it go..

You have been unable to do that, junior.

> I'm sure he doesn't give a flying fuck about me and I don't care as long
as
> he gets me my amps his is #1 in my book.

No, your attitude speaks different.

> I don't know why every one complains about delaying

Because it speaks of a couple things..

1. People want to have correspondence with the people they deal with.
2. People want to know that after the sale, the manufacturer will be their to back the product up. When it takes months to get the product, you have to question the after sales support.
3. DaveMade has been plagued with the same problems for quite some time. You would think that the manufacturer would get better distribution channels, better or more builders and would be able to deliver a product in a timely manner.

Yes, everyone can see that their are times when a manufacturer gets behind..... But, they either hire more people, or get their ass in gear and make up for it.

They DON'T let the problem continue to manifest itself until it becomes
public knowledge.

how many of these people
> send payment in advance?

Pass?

You know Dave Made isn't dealing apples were
> talking illegal shit here

Yes, and since the 80s, I have been dealing with the people that deal it.

Messenger? Lived about 20 minutes from the person who built and designed
it.
Texas Star? LIved about 45 minutes away
Palomar? Lived a bit farther away

Now,

Silver Streak
Blue Face
Magnum
Messenger
Texas Star
Cookie
X-Force

They don't seem to have the same problems with delivering product, and they
all ship more than DaveMade does.

What does this tell you?

That they don't have the inner turmoil, they have more people building, they
have better distribution, etc., etc., etc. than DaveMade.... Singly or a
combination of the above.

and When you get a hundred idiots a day saying
> they want to buy an amp and change there mind you also will start blowing
> off people.

Bullshit.

Only an idiot would think that way.

I have no problem sending money in advance and I have no problem
> getting my amp.

And you also live an hour away.

Gee... Funny how that works, isn't it.

And you are also purchasing a large amplifier, that automatically has more
profit built into it.

See the big picture yet, Jr.

>
> Why don't you go start a Texas star thread of your own and keep you.

And keep you what?

I have you frazzled again, I can tell. Your not even finishing your sentences again!

I doubt
> you will get many people to join you but why don't you give it a try.

Been their, done that.

Besides, what purpose would it serve. Texas Star has been around longer than most of the amps on the market today, have a proven design that works for the targeted audience, and don't seem to have the "dirty laundry" that your boys have.

As a matter of fact, the only time people bitched about not getting a Texas Star was when they where busted!

That seems like a pretty good track record to me.

A. Good delivery.
B. Good product (for daily driver amps).
C. Good customer service (great, if you ask me... Way over and above the call of duty)

Or, to say the same thing that you do... This is a public forum. I can post where I want, when I want, and their is nothing that you can say that will make it any different.

Why shouldn't I be allowed to say what I want, when I want. You say that you can!

>
> Every Dave I get many emails about people making fun of you and your
> stories. It makes me laugh.

Every Dave?

I don't get it.

Did you mean Every Day?

And, sonny boy, I can say the same about you, however, to leave the dirty laundry where it belongs, I don't say anything about it.

The emails don't make me laugh... You do that enough on your own.

> I will be the first to admit that I am nothing in this CB game.

You got that right.

I know I'm
> just a sucker with money but You are not one bit better but you act like you

> are the coolest thing since sliced bread as Denise put it and I find it
> true.

Who is Denise?

Are you making fun of your boy now?

>
> Get a life and stay out of the Dave made conversations if you don't like
> reading them!!!!!!

No. I can post what I want, when I want, where I want.

You said it first. Can you blame someone for following your lead.

If you don't like what I have to say.... Don't read it.

Use the kill file.

Lastly, get off of people jockstrap.

You are a fool, you have a pocketfull of money, and it shows.

?
==========
Sorry to break your bubble , Of course he had to start with a basic amp,but
trial and error,
and years of refinement. Do you think his amps havent changed from day 1?
And you know as well as anyone if it wasnt for the rat bastard #123 from
Kankakee
daves current design of amp would be made by him only and we wouldnt be
having this conversation now.
...

> dave is a copy cat of someone i heard the name once , but i cannot
remember .
==========
See thats the problem "You heard" and have not a clue other than other
peoples hearsay....
Dave has had over the years probably 10 or many more different design amps
so which
one did he copy. i have pictures you have hearsay ...which would you
believe?

Good Day
Rocket Man

No...

You assumed I was a druggie.. That couldn't be farther from the truth...
I simply took your "name" and turned it to my advantage to prove a
point... If you didn't get it, maybe you should go back to school and
take some logic classes, if you can put the pipe down long enough.

You also assumed that my take on the conversations concerning amp theory
is the only way to interpret them. It of course is not. If you'd taken
the time to actually read what I've written, instead of skimming over it
and spinning it whichever way you felt like it, you might have seen that
as well.

I suppose others could have seen said conversations as "big penis"
contests... I didn't see them that way. There was alot of good theory
posted in them, as well.

Of course, if you don't filter out the drivel and bullcrap, you'll only
see what you want to see... drivel and bullcrap.

Can I enter a plead of guilty with explanation? It was the coffee. :-)

>Let me ask you this, would you like to be blamed in another NG for
>making post that you didn't ? What do you think is happening to Dwight? or
>Paul?

Nope, but when you stand by your words and don't post trollishly; (Is that an
actual word?) you don't need to worry about it either.

>What do you think is happening to Dwight? or
>Paul?

I think it's wrong and I certainly don't wish to see them wrongfully (...or
even rightfully, for that matter.) harrassed. But this is about Aaron's
question, which is basically "why is this happening?" I think it's a ridiculous
query and trying to attach Dwight's, Paul's, or even Leland's woes to his own
is lame.

>Lets assume for a moment Phil has these special powers which we all have

>going to prove?

Absolutely nothing. But if he had even a nickel's worth of credibility left,
it's spent! (As if the troll-like tactics weren't enough.)

>Is there a reward being offered for this info?

I seem to remember one being mentioned...by Aaron.

>Please answer the questions 1 by 1 so we all have a grasp of what is
>happening or going to happen.

Sorry, that's not for me to say. As I said before, it all "means" nothing other
than the complete deflation of the Grand Imperial AKCer's credibility. As for
any other consequences, unknown. The word "actionable" does come to mind
though, though I'm not sure why.

>Step up to the Mike it's your 15 minutes what
>will you do with it?

That's mic and my fifteen minutes passed a long time ago. Rest assured that I used them wisely. (I suspect I'll be alloted some extra innings though.) Take it easy.

Hi PipeDreams,

You just posted about worrying about me being the voice of reason. Here is a fellow asking for help. Do you think insinuating that he lives in a trailer park is helpful?

There are many affluent areas in FL and even if he does live in a trailer park, there's nothing necessarily wrong with that.

which is most of your posts, You are a keyclown who has a ham license no
different than troll free, Jay, dick etc. You ride the fence trying not to
offend the keyclowns, when posting as a ham operator as noted by a few
clashes you have had the past few days with train and sd jonesjumping on
your case and you come right back and stick your nose right up there butt
holes.
read just the 3 amp wars posts and tell me where there is any amp theory
being discussed there are plenty more i will give you a few minutes to

digest the info.

Bert, Honestly if Aaron Voobner is his real name or not will it really
truely make a difference to the group. Personally i think not, it is what he
is posting they get there panties in a bunch about. No matter what name is
attached.

>
> >What do you think is happening to Dwight? or

Can you be sure nothing will happen are you speaking for the group or yourself that nothing will happen? What he has to say not the name he uses is where credibility comes in. Just because someone posts using there "real name" makes them no more credible than the next guy. I guess Tra1n, twistedhed,landsark,sd joneses, mopedholder, etc etc etc are not credible using this logic. yet they are held in high esteem with the gang I mean group.

> >Is there a reward being offered for this info?
>
> I seem to remember one being mentioned...by Aaron.

Thats like Bin laden offering a reward for his own head don't ya think. But I do recall a few keyclowns willing to pay the price for this info.

So were are to assume, that anyone who post any info with there pseudo nic's are not credible. At least Aaron, Sparky, leland, George uses there own name. I have yet to see anyone post info/proof to the contrary that this is not his name agreed ? But the guys crying the loudest don't use there real name. Is this another Keyclown double standard ?

No, aaron, or n8, or whoever you really are... It's futile to argue with you. You're too ignorant and closed minded to debate with... you've resorted to personal insults (and before you go there, you started with the insults, I was responding in kind) instead of hard facts in your debate, which goes to show the ground upon which you stand is quickly eroding away..

Meet /dev/null (you figure it out)

Hello Dick: Yes I am aware of the multi band stuff. But still a multi band quad beam could use the same impedance matching circuit, I would believe.

No, no 28 ohm coax in the radio shack flyer.

Kind of funny burying the antenna. Had a local who made a 5 element beam for horizontal DX work, and got so mad at the antenna he could not get the SWR down to a civil roar, he ran the beam over in his driveway with his truck. I was able to save the plastic covers that go on the end of the elements. This indicates the need for some written material on the antenna tuning ways of the world, ah?

And a safety tip should be issued in the antenna building article, that beer should only be issued after the SWR is adjusted. Just my thoughts, I know a lot of guys drink beer with breakfast!

Bert do you know the amount of trailer parks in Florida. I didn't insinuate he lived in a trailer that was your imagination and you trying insinuate what I am thinking. Did I say that trailer parl living was something wrong. Don't read into it what you want it to be Bert. Things can be taken in many ways.

I was not referring to the name "Voobner". I would be insulted if said I was the fictional character "Voobner". Who would want to be called the resident rrcb clown? Are you sure that Frank and you aren't related. You both seem pretty dense sometimes.

> Yeah, that was a real tempting deal. They send you a copy of their
> drivers license in return for "personal info on Aaron Voobner". Jeez,
> I wonder how come nobody in the NG took you up on it?

Personal info on "Aaron Voobner". LOL, that is funny. The only personal info that exists for "Aaron Voobner" is fabricated by you and displayed on your web page.

> Hey, I got an offer for ya, Phil. Send me a xerox of your credit card
> and I'll mail you a whole bunch of "inside info" on what the saucer
> men are doing to Twistedhed while he sleeps :)

No that wouldn't work since you can't provide a Voobner home address. Tell you what... I will take you up on the offer if you will provide me with any street address of a Voobner in the USA. LOL!

>
> Buster, this is not your average Joe CB meter.

My meter is not an "average Joe CB meter"... 1000 Watts is not legal CB
power, and most CBers do not care about reading deviation.

In the UK, most CBers think that 500 Watts is seriously kicking a$$, so 25KW
is an incredible figure for CBers.
You can question the need for such devices all you like, but the meters are
not illegal, and ownership of such a meter is NOT evidence that laws are
being broken.
Even the cost of the equipment is not proof that the equipment will be used
for anything. It is amazing what some collectors will pay for something that
they will never use.... Look at the value of some stamps and coins,
collectors have no intention of using the stamps or coins, just looking at
them.

Sir,

You are using the name "aaronvoobner", but you are not Aaron. You have used the name popeye, but I doubt if you smoke a pipe, eat spinach, and have a gilfriend called Olive. How about "prozac", was this a statement?

This Anthrax problem is scaring the world, as it could spread anywhere. Hoaxes and false scares are common because of the level of fear. Nobody seems to know who is behind the attacks, but it could be anyone... even a friend, neighbour, or relative.

I seriously hope that the culprit (or group) responsible are caught and stopped. With the size of america, it could be like trying to find a needle in a haystack and I wish your authorities luck in resolving the problem.

God bless America,

Brainbuster.

Always connect the antenna (or load) before transmitting.

Nice plaque, but.....rather odd the seller is "wizard00765" and the first bidder
is also just plain "wizard" and not only that, the first bid was $25.00 but
"wizard" bid $110.00 on his first bid (the only bid so far) and met the
reserve right away. Is it me, or is this odd????
Mr.K.

I myself am sick of most hams attitude towards CB only folks. I will
no longer check in to the local sideband club. I will no longer
listen to their snobby butts boast about their contacts on the
"other bands". These ham/CB'ers do not check their tickets at the door,
and have brought their snotty thoughts to the local CB airwaves.

(Good thing Nï¿½BK has blocked out Hotmail!)

I have a great radio that seems to rather rare. It is a TRS
Challenger model 1400. It works fine on AM and USB but is off frquency
and has some carrier on LSB. I would like to get a schematic at least
and a service manual would be better. Does anyone out there have any
information on this radio?
Your help is appreciated.
Strider

Brainbuster, Duly noted just like the name Train doesnt make him a train, nor does tha name Landshark make him a shark that lives on the land, or you a guy that busts brains with all that is going on in the world he is down right not a stable person especially when he makes threats as to a special delivery to Dwight. If a guy named popeye threatens me the worst I can fear from him is a can of spinach upside my head. Or if a guy named prozac threatened me I would expect a guy who is subdued on drugs. Can you see the light Good Buddy?

Is absolutely not legal UNLESS the radio absolutely under no circumstances is able to use it to determine TX freq. Installing it and only using the rig to receive is not legal at all. You would have to automatically switch to mixer crystals or pll circuit on transmit for it to be legal. Why don't you sissies read the regs?

I think the best VFO Installations where the Yaesu 901 VFO's that had
the frequency counters and Led's added into them, and where hooked up to
the old Mark Sidwinders 27.

I'll bet that would bring a few American Dollar$.

The VFO signal level was a bit low so by using one of the unused tube
haves, the VFO signal level was now usable. In the 1980;s that was a
blast watching the actial frequency, in a digital read out on the VFO,
simply bitchen.

I've also seen the Heathkit VFO with the slide rule faces used for such
VFO addations.

> KC2HMN

Hi Bert,

While we all have some faults, you seem to be joining Phil in his desperate attempt to shift the responsibility of his actions away from himself and onto someone else. The facts are simple: Phil forged emails with the intent to deceive and obtain information, and he spread that information to others without permission.

Maybe you are missing the point here. The people opposed to illegal operation are posting within the limits, and what we do is not only harmless, but legal. Phil has exceeded the boundries of acceptable behavior by a huge margin. It makes no difference the reason behind his actions, and by trying to expound those reasons in order to minimize the severity of his actions you are only opening yourself up to allow the same violations to be committed against you in the future by someone that doesn't like you for whatever reason. (No, that's not a threat.) And if what Phil did is going to be considered 'acceptable' behavior, then where is the limit? Does the limit get pushed back every time just because the reason is Voobner?

In other words, what actions are justified against someone that's nothing more than annoying?

Oh, that's brilliant, Phil. Assuming someone uses webtv or aol
because there is no proof he doesn't. That's twistedhed logic!

Hi SSB,

What about the "amp war" posts that you requested proof of (and that
he so graciously provided)? Could you please look them over and
determine if (a) they contain useful theory, and (b) they contain
repetitive material?

Thanks,
Aaron

You can also tune it using a field strength meter, or by having
a friend on another radio a mile or two distant tell you when your
signal is best. That's what you are shooting for, and it's more
important than SWR.

BTW, a linear amplifier is illegal to use with a CB radio, and can
carry a fine of up to $17,000. (Hey Jay, why did you bring that up
when he didn't even say he was using a linear?)

Dick didn't say the CB (the Citizen's Band), he said 11 meters. And
yes, some of those sites listed are repeater sites. None of them are
between 26.96 - 27.41MHz.

Never have I prevented anyone from having a discussion. Reactions to
my comments are the responsibility of each individual reader. If
rulebreakers get upset or annoyed when seeing the rules posted, they
should simply avoid reading them. As has been pointed out, that's what
killfiles are for. The problem as I see it stems from the fact that
many of the rulebreakers wish to perpetuate the perception that the
rules either don't exist - or don't matter. My posts clearly disturb
that perception.

> possibly...

FYI:

The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be
subject to fines or imprisonment as well as equipment seizure and
forfeiture.--FCC

How do we know that you didn't forge those emails yourself? I wouldn't put it past you and "Aaron" to do that.

> and obtain information,
> and he spread that information to others without
> permission.

You mean the Voobner = Stewart rumor that you and "Aaron" started? Maybe its not a rumor at all...

Does anyone else find it strange that Lackey Frank and fictional "Aaron" would work so hard to convince someone that Voobner = Stewart and then only 24 hours later work 10x harder to try to convince everyone just the opposite?

Frank why do you continue to avoid the question? What do you have against Dwight that you would use him in your silly games? Isn't Dwight just a little upset with you? Maybe Dwight will jump in here and tell us how he feels about you using his name in your game with the anonymous emailer. You did send Dwight those emails you claim to have didn't you? I would think that Dwight would be quite upset that you involved him.

> And if what Phil did is going to be considered
> 'acceptable' behavior, then where is the limit?

LOL! Frank Gilliland concerned about acceptable behavior! Just one look at your posting history will reveal your idea of "acceptable" behavior. What a hypocrite!

In most installations, a regular dipole has about a 30 ohm or less input impedence owing to height and the tendency of the magnetic near field near the feedpoint to couple to every nail or metallic hardware in sight or out of it. So folding the same dipole gives a feedpoint on the order of 120 ohms (matched nicely by a Q section) and a tripole generally won't make 300 (matched by a balum made of the same coax you are feeding it with, 200 ohms nominal with a 72 ohm Q-section will bring it right out) so I am not the resident genius on transformer winding. The only ones I remember well were for a triangular beam built out of three folded quadpoles on 15 meters; the relay box, built from pinball relays, was harder. Remember ground conductivity in Wisconsin sucks swampwater thru a long thin tube.

Actually, the reduction of the near-field usually causes impedence multiplication beyond the 4:1 and 9:1 that theory predicts. Remember that the input impedence of the universe is 377 ohms - all the standing waves gots to be somewhere. There is a design for a dipole that is a near-constant 377 ohms for its entire length but you get carpel tunnel soldering all the caps in refrigerator containers every 3 feet and doubling the length of the antenna; works gangbusterly but is still not all that popular.

In case you have not heard of them, Q sections are 1/4 wave sections (electrically, use the velocity factor) of coax of a different impedence which will be the geometric mean of the 50 ohms feeding it and the resulting

output impedence. So for 75 ohm coax, the impedence at the output will be (75*75)/50 or 112.5 ohms. By geometric mean, it is meant that if it has a 1.5:1 relationship to 50 ohms, the output impedence will be 1.5 times the 75 ohm coax or 112.5.
Ninety ohm coax will match 162 ohms. Slick. Belden makes a 125 ohm coax with which I have zero experience.

The coaxial balun that I mention is an electrical half-wave simply attached to the feedline at one driving point of the dipole and terminated at the other leg of the dipole with all shields attached together. As it also divides current in half, it has a 4:1 impedence transformation as well as acting like a balun. I always used a stiff sheet of plex and taped the balun to the feed; they get heavy at the feedpoint. As I am a fan of Belden 9913, I used 8240 for the balun to keep the weight under control.

It's a me thing but I like to use the dirty tricks before hauling out my toroids and teflon wire.

Dick, Bug Killer

While what you say is true (cough,cough) you are still overlooking the point.
As far as the killfiles are concerned, yes they work great. Only problem is if I killfile you assholes, I get no entertainment from you and fatboy, so I let all the garbage thru and chuckle to myself as you and fatboy think you are doing something.

He's on record as disliking Tech class licensees, at least to the point
where he will not function as a VE for them.

Not so much a dislike as a concious decision that barring a miracle, a waste
of my time if it is not quickly upgraded.

I believe, feel free to disagree, that the codeless Tech is NOT and was
never intended to be the entry-level ticket to Amateur Radio. It has
functioned as a giant diversion and renews at no more than 15%. So I do not
believe that administering a codeless Tech exam is a favor to either the
testee or the hobby.

As I have noted before, it was a thought that never saw a test because it
can be administered by lower classes so we Extra VEs had plenty to do with
Advanced and Extra exams.

You will find that Techs tend to be encouraged and welcomed early, prodded
for a while, and then written off as hopeless in about a year. Nothing more

than that. While I would not buy either of them a beer, there is no emotion beyond that that any other terminal busybody would not receive.

I am reminded of the classic sequence in Casablanca where Peter Lorre asked Humphrey Bogart, "Reek, I bet you hate me.". Bogie replied, "If I thought about it I probably would".
I don't hate either one but then I don't spend my life thinking about either one.

The Velvet Codpiece.

Sparky, are you sure they are in fact repeaters and not just duplex channels? A decent repeater requires at least a one-percent (the 600 kHz of the 2 meter band is a fluke of licensing rules) and most ten meter ones are split site and still don't work very well. Just does not seem reasonable to even try a repeater on lo VHF.

Haven't been on CB in twenty or more years.

It carries the name ALAN or KLV. It will also melt the solder out of the tube socket connections if you don't add a fan to it. The tube is cheap to replace. Mostly used as a Modulator or Driver.

think many of us would be interested in a comparison of center-loaded antennas, and their characteristics. The Wilson base load antennas are solid performers, anyone have a comment on the trucker center-load versions.?

There are several folks here that are fond of the Hustler center load antennas. Has anyone an Idea of their typical bandwidth?

I am sure many of us would like to encounter a good 5' mobile antenna. What are your opinions????

Illegal to be sold in the US. CB crap! Probably very dirty when used and non-linear like most illegal CB junk!

If you're buying it from a dealer do you really think that when something is sold illegally that they care to help you out when there are problems?

DON'T POST THIS JUNK ON AMATEUR RADIO NEWSGROUPS unless you want this type of an answer!!!!

>Hi Bert,
>
>While we all have some faults, you seem to be joining Phil in his
>desperate attempt to shift the responsibility of his actions away
>from himself and onto someone else.

Hi Frank,

Nope, no such a thing. I just answered what I believed to be an incredulous question.

>The facts are simple: Phil
>forged emails with the intent to deceive and obtain information,
>and he spread that information to others without permission.

While I agree that this is not the most honorable investigative tool, my comments re. Aarons question didn't address this.

>Maybe you are missing the point here. The people opposed to illegal
>operation are posting within the limits, and what we do is not only
>harmless, but legal. Phil has exceeded the boundries of acceptable
>behavior by a huge margin. It makes no difference the reason behind
>his actions, and by trying to expound those reasons in order to
>minimize the severity of his actions you are only opening yourself
>up to allow the same violations to be committed against you in the
>future by someone that doesn't like you for whatever reason. (No,
>that's not a threat.)

Understood and not taken as a threat. But consider this; if someone were to "not like me," on what grounds would they attack me? For taking up bandwidth with repetitive posts? How about veiled insinuations re. actionable activities? Perhaps posting personal insults? (I don't even do this in response to an insult.) Heck, even if I posted under ten "assumed" identities, it's your deeds that draw malicious attention. That's why I couldn't care less if someone disagrees with my position re. any issues. I present my beliefs and any points that I feel support said beliefs. I DON'T insult or direct profanity towards ANYBODY, particularly those with whom I disagree. And if I posted under ten other identities and "they" all behaved in as civil a manner, then how would my credibility suffer? But that's not the case here, is it? Give respect, get respect. That's were the limits are set. This is NOT the airwaves, it's a newsgroup.

>And if what Phil did is going to be considered
>'acceptable' behavior, then where is the limit? Does the limit get
>pushed back every time just because the reason is Voobner?

See above. While I may not agree with the investigative approach employed, Aaron's query of "why me" is incredulous. It;s the only question I addressed.

>In other words, what actions are justified against someone that's
>nothing more than annoying?

Again, I remember a little more than "annoying." However, with this post, I'm announcing that I'm QSX re. this topic. I've had many a classic "back-n-forth" with Dwight and although I disagree with him re. some things, I do respect him. I feel the same re. Leland and Paul. I responded to Aaron's question because I found it "way out in left field." and, in a moment of weakness, I succumbed. I now regret this. You guys duke it out. Like I said, I couln't care less if someone wants to post under a hundred different "screen names." Just be civil about it.

NOW! How 'bout them Yankees!!! Later guys, (...and gals, if any are sandbagging.) I hope to watch another championship come home. Arizona looked darn good last night though. :-(Take it easy, EVERYONE!

And in fact will generally not be at the same setting athough close.

It was pretty common in the days when dinosaurs roamed to tune with a pick
up and a lite bulb, preferably flourescent. Six meters was horizontal so
mobiles had to run a 'halo' style antenna to obtain horizontal polarization.
Usual tuning method was a twenty watt circular flourescent in the middle;
adjust for maximum lite. I would suspect one of those desk lamps would do
the job but as Jay points out, unless you have one, there sure as hell is no
reason to buy one.

This post will serve to answer your 3 previous posts to this thread. It does it on 27 Mhz as you should well know, being you were talking this morning about how long you've been on the NG's and this one in particular. They HAD been the subject of much debate about 6-8 years ago when they first started appearing in the states. There was much a talk about a straight tube swap that would kick it up to the 300-500 watt range but it was for all intents and purposes dispelled because the supporting circuits wouldn't handle it among other things.

How about this.....Keep your cross posted bullshit answers to whatever group you are posting to. If the guy has a question he would be better served by giving him the answer he seeks rather than being some head up your ass ham dweeb with an attitude about CB radio. It's fucking douche bags much like yourself who make people swear they will never go ham and stay with CB.

I tried Mr. Buster, but with the likes of Frank,
the Aaron obsession, my little buddy in Pa who
doesn't know which screen nic he is, you'll find
it very hard to not used kill files. When you have
proved them wrong, all they can do is come back
with insults or try to change the subject all together.

Good Luck though,
Landshark

Because Mr. Buster, when cornered with the
truth, he can only throw insults. He knows he
can't change screen nics, his little buddy confirmed
that to him, so now he posting from newsreader.
But, watch, I'll predict, just like these guys
go to "Miss Cleo" (they love to ref: her) he'll
throw a few sexual innuendos, and call me few
names.
I've kill filled the new one, so I won't see him until
he spends even more time opening another free
account some where.

Actually, I may want to use a Linear in Baja, as the guy at the shop I
bought it from said I could buy one in Tijuana. I will use the radio
most likely 99% of the time in Baja. Thanks -he must have read my
mind. I will probably try it without first though and see how it works
in the very hilly terrain of the deepest baja desert.

Hi Train.

They are the references of all the posts in that thread.
Look in my header, and you should see them repeated, with your own ref added to the list. I believe that my ref will be added to the list when someone replies to this message.

BTW: I have some great technical data that may interest you. As it is not a subject for discussion on a "rec.radio" group, can I e-m it to you?
If so, is the "cbmods" addy still valid, or could you e-m your addy to me at supanet.com ?

Regards,

brainbuster.

^ Yes we do. Just drive any school and have a looksee outside. Making a
^ meaningful dent in the wide spread violation of Part 95 rules here may need
^ that same level of deterent used by some other countries in their "war on
^ drugs", i.e. the shoot the dealers in the head. Dead dealers can't get out
^ of jail, and or pay their fines, and get back in to business once again.

My first reaction to your idea of shooting CB offenders in the head was to ROTFL... but then I had this terrible thought... what if you was serious, what if it wasn't a joke.

Even as a CBer, I see many crimes as being more important than illegal CB. As the majority of the public have nothing to do with CB, and never even consider it, I seriously doubt if more than a handfull of people see illegal CB as a priority.

In the UK, we have figures for the number of people killed or injured by fireworks, speeding or drunk motorists, drugs, accidents in the home, accidents at work.... the list goes on. My local library has books full of statistics. Strange how there seem to be no figures for people killed or injured by illegal CB.

Recently there have been some high profile child abuse cases, where the children have died, covered in bruises. One had no bedroom, and was made to sleep in the bath. She died from the cold, covered in bruises. I am NOT ashamed to say that I cry out loud, and have to change TV channels.
As long as there are children suffering and dying because of people breaking other laws, I find it impossible to get fired up over illegal CB. It just doesn't compare. But suggest that child murderers should be shot in the head, and we could agree on something... Why pay to keep such people alive.

Regards,

Brainbuster.

Hi Phil.

This works both ways, you could also lock Sparky away in your killfile.

It's no good saying that you will drop it when he does... if he feels the
same, then you could spend the rest of your days in a bitter flame war.
Surely your time is worth more than that.

The newsgroup is a public forum. I don't believe anything that can
be done here justifies violating the privacy of two or more people.
Even if Voobner was guilty of harassment, it still doesn't justify
what Phil did -- as the keyclowns always say, "two wrongs don't make
a right", but they don't always abide by their own rules. Case in
point, the incident where N7VCF's phone number was posted hundreds
of times in this newsgroup. Why wasn't anyone complaining then? Or
was that justified because I happen to be annoying?

Sorry about your Yankees. They were a great team, but it's time for
someone else to stand in the limelight.

I have seen a few repeaters for 11m, but I have never seen one run
full duplex on 11m. They usually retrans on a higher band.

Hi Bert,

I can never quite tell what it is you are trying to get across or who you are trying to get it across to. As mentioned previously, you have mastered the art of the ambiguous statement. Therefore I can reasonably assume the litany of transgressions you list below may be intended to describe my behavior. In any case I will address them under this assumption.

kc2hmn@cs.comnospam (Bert Craig) wrote in message news:<20011104204100.16515.00000902@mb-de.news.cs.com>...
> Understood and not taken as a threat. But consider this; if someone were to
> "not like me," on what grounds would they attack me? For taking up bandwidth
> with repetitive posts?

If you are referring to "flood posts", that's not me. If you are referring to postings of FCC rules, they are repeated in proportion to posts made denying or openly challenging FCC rules.

>How about veiled insinuations re. actionable activities?

Not sure what you mean by this. Rest assured, I don't insinuate anything. If I say I am forwarding something to the FCC, I do forward it. There's no insinuation intended.

> Perhaps posting personal insults? (I don't even do this in response to an
> insult.)

Good for you, but if someone insults me I reserve the right to either ignore it or answer in kind. My choice.

> Heck, even if I posted under ten "assumed" identities, it's your deeds
> that draw malicious attention.

This is the only "identity" I post under.

> That's why I couldn't care less if someone
> disagrees with my position re. any issues. I present my beliefs and any points
> that I feel support said beliefs.

Voila. As do I.

> I DON'T insult or direct profanity towards
> ANYBODY, particularly those with whom I disagree.

You don't see a lot of profanity in my posts do you? But as stated above, I reserve the right to greet insult with insult if the need should arise.

> And if I posted under ten
> other identities and "they" all behaved in as civil a manner,
>then how would my
> credibility suffer?

I have no need for multiple identities. My own does just fine.

> I couln't care less if
> someone wants to post under a hundred different "screen names." Just be civil
> about it.

I only post under one screen name, my own. And as I stated above, I
think I conduct myself pretty civilly.

Hope this clears things up for you.

Nothing at all (Why do you think it did?). I was merely pointing out that, while merely owning an amplifier is not illegal, one needn't do anything illegal to be attacked by our government; a warning to unlicensed folks considering buying one.

Your two posts indicate you are a product of modern parenting and education theory: excess self esteem coupled with poor reading comprehension.

news:<IdVE7.170942$W8.5349526@bgtnsc04-news.ops.worldnet.att.net>... Why
the hell do you think they are running the campaign? All of the higher
grade hams and old heads wrote them off a long time ago. Dick NØBK
-
Personal Property carried on with and overly concerned himself with
everyone's view of "nad boy with:
I assume you consider yourself among the higher grade hams and old
heads. That's OK by me. As a spokesman for this group, maybe you can
answer some questions:
You've "written off" Leland Scott? How come? What was his "offense"?

HAHHAHALMFAO! Your concern is touching, chickenhawk.

"Funny as hell that you think you even rate a response. Whatsamatter,
feelings of abandonment again?..
Heeheheh"...

To begin with,

Maybe it was him attacking Dick in a hammie forum and trying to change
the subject when he pointed out "Nad was forging several cbers in there.

Maybe his admitted self involvement with the AKC kennel back when he was
playing games with Kari from Finland has something to do with it.

Maybe it was his threat to the group that if I didn't curb my posting,
N8 would come back and harass and pornspam the group, then making good
on the threat.

Maybe "Nad's involuntary anger responses have something to do with it.

Maybe it is 'Nad's inability to disagree without getting personal,
calling names, and
hurling insults.

Maybe it is his inability to debate, evidenced by his taking as a
personal problem anyone that disagrees with him.

Maybe it is his juvenile accusations and incredibly stupid remarks.

Maybe it is his forging.

Maybe it is simply his belief that terrorists are using 2990's on triple
5 as a means of communication and many do not wish to associate with

double digit IQ's..

Maybe it is his inherent obsessions and lingering over those who he admires.

Maybe he just isn't a very nice person, therefore, not popular and overwhelmingly disliked.

Maybe it is the arrogance displayed among one of the many posts by him where he claims he is above cbers.

Maybe it is one of the several posts where he admits his presence is simply to troll.

Gee, I dunno why any of the above would give anyone reason to have a problem with 'Nad.

Anyway, why would you care?

Just for shits and giggles and because I was waiting for my laundry to
 dry I
used the ULS search feature on http://www.fcc.gov, hit search at the top
 and
look on frequency.
My quick scan found great heaps of licenses from 27.43-27.53 on the odds
because most are 20kHz FM but there is some AM and data. The area from
26.07-26.47 also on the odds for the same reason are full of remote
broadcast authorizations.
-
If you look up the remote authorizations most licenseholders that I
checked also have authorization in the 450 UHF band which is fortunate
when the spots are high but not so cool when a repeater is not near.
Appears that the Commission is back to authorizing things in the
freeband judging from the dates of the licenses. Dick NØBK
-
It's too bad you have Aaron in your killfile

"Oh, hell, Sparky, just admit you post as him, also."

because a few days ago he posted a list I compiled of all the licensees
between 26 and 28MHz. Considering the sane part of the planet has Aaron
in the killfile, nothing is lost.
I hope you did not list Violet Communications everything license and the
experimental permits.

Sparky tried and failed, yet again, with:
Nope, no experimental or IBFS licenses were listed, just ground-mobile.
Knowing that many freebanders open up their mod limiters, I'm sure many
of these licensees experience quite a bit of interference. I have
contacted a few and they thought the interference was because of other
-legal- radio traffic. Because of the CTCSS it doesn't bother them
locally, but it sure messes up the repeaters. Maybe these freebanders
like twistie are really getting their barefoot DX from commercial
repeaters

-- that's being investigated

"By who?"

Good Luck Mr. Buster,
This argument has been given at least a dozen
or more times, each time they will change the
subject or throw insults.

Good idea there. I was thinking more along the lines of something with a
Dial to adjust it. but the big resistor will work for sure.

"Brainbuster" <brain@buster.com> wrote in message
news:9rvn8qevf2@newsg4.svr.pol.co.uk... The music playing, swearing,
high power amps, etc must provide great cover for the terrorists
messages.
It would.

Ok, so they may not hear each other above the noise, but neither can
anyone else.
Unless they were within a few miles of one another. All of the illegal
high power CBers would provide convenient cover whether they knew it or
not.

The occational skip conditions provide great chances to talk to their
own country... if it just happens to be running right at the exact time
they need it to.

I suspect they would use CB more for local communications than anything
else.
The fact that the band is available for anyone to listen to, and that
1000s of people will hear their messages must really make CB the ideal
choice for secret terrorist messages.
Ask yourself how much you really pay attention to what you hear on 11m
most of the time. How much of what you do hear really makes any sense
most of the time anyway? Do you understand all those conversations, on
the different channels, in a foreign language you hear too? We have over
250K people from the middle east living in Dearborn (south west of
Detroit) and no small percentage of them use CB Radio. Finally are your
really going to notice somebody sending coded signals that at first
appearance seem like just another channel control freak jamming the
frequency with some weird sound effects?
-
The size of a CB and 1KW illegal amp must make them the perfect choice
for hand-held use by terrorists while on a "mission". More like a
terrorist slinking around the airport grounds using a 4 watt handheld.
-
What terrorist would want to use telephones, internet, e-mail, and
"snail mail" for reliable, private, long distance communications, when
they could use CB?
So they use all of the above.

Frank <fgillil@tincan.org> wrote: <blah blah blah> (what a long winded
post! Frank must be really upset!) The decision to post that information
publically was your's I did not post any claim that Voobner = Dwight. By
your own admission you did start the rumor that Voobner = Dwight. Nice
guy who will sacrifice his friends for the cause...
<blah blah blah>
For the sake of Dwight
I wonder how Dwight feels about you setting him up and starting rumors
about him Frank? Why would you do that to Dwight? Do you have something
against him? What did Dwight ever do to you that would make you set him
up like this?
<more blah blah blah>
and I will even include the emails of you begging for my driver's
license
What a distorted sense of reality you have, Frank.
You are the one who contacted *me* begging *me* to send you the proof
of "Aaron's" identity. When I asked you to verify your identity by
sending a photocopy of your DL with the DL number and SSN blocked out,
instead, you sent me a link to a court case that you were involved in.
(Would you like me to make that information available to anyone who asks
for it?) You even wanted to call me on the phone. You must have wanted
that info pretty bad, huh? Wow, with each post you confirm the assertion
that you are indeed "Aaron's" Lackey.
Phil C
-
1. You did indeed post the assumption that Aaron = Dwight just two posts
ago.
2. What I put in my private emails is nobody's business except mine and
the person to whom I am sending the email. You have violated that
privacy,
-
"You are one lying hack, Sparky, but it doesn't matter anymore 'cause
everyone who is anyone in here knows who and what you are, along with
your little trilogy of doggies, you amount to little more than one to be
toyed with. Twasn't more than maybe 6 months ago I sent you a single
email asking why you what your problem was, and the LEAST of your
offenses concerning the only email I ever sent you was that you posted
it here, not to mention the garbage you added to it and the headers you
took and applied elsewhere, so don't cry that privay BS song here, son.

It doesn't wash, and neither do you."

so don't put any blame on me for starting the rumor -

"We don't any of it on you. We put it all on you."

Hells bells, the trolleys were adjustable, too. Other than that, a dozen or so 3050's, one more to handle the base current, and an adjustible regulator would do it but the heat sink should closely resemble the stern of the Forrestal.

Cross-posted to: alt.ham-radio.mods,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.cb

Typical amplifiers sold in the 1960's and 1970's really for the CB market, but
marketed "under the disguise" that it is for amateur radio (10 meter band).
Be advised that these are not amateur type accepted amplifiers.

The dead give-away is the 5 watt input. Many early versions used old TV
"sweep tubes" for the finals and were of questionably spectral purity. They did not call
these TVI or RFI monsters for nothing. Be especially cautious of any units that have
been tampered with the "urban legend" to remove the band filtering for more power.
More power everywhere, except where you want to be transmitting.
A 5-element Chebyshev filter (1996 ARRL Handbook, p. 16.9) is always a good idea.

Give the wide spread availability of the solid state versions (Palomar and other clones)
why go tubes for regular operations.

Now if you want a collectable item for "the era", cosmetically it looks to be in good shape.

4394. Re: Who is in the Freeband??

Newsgroup: rec.radio.cb
Date: 2001-11-05 17:32:08 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <i2AF7.13292$LD.330663@e3500-atl2.usenetserver.com>
Source record: 103407

Hi Dick,

I haven't thought about repeaters in the "freeband" area, but I would think that, even if it is legal, it would cause more interference rather than actually enhance communications. You and I both know that the 10 meter ones don't work very well, often creating a hodge podge of noise. But since this would be considered an ":experimental" form of communications in the Amateur Service, it is a mode that many hams happily engage in. Even I do so, but I can only stand the racket for about 20 minutes! LOL! According to the post Sparky made in this thread about "enhancing" DX for freebanders, I am given the impression he has not much knowledge of how repeaters work. IF freebanders were keying up repeaters (sincerely doubt their existence), they would not know it because of the duplex nature of their operation, and such would not "enhance" their DX--only jamming traffic of legitimate users. But IF there are repeaters, then I would think they would be tone access.

AHhhh - I *sincerely* hope you are correct!

We CERTAINLY don't need or WANT CBers such as yourself, with their lousy attitudes, foul mouths and
other assorted social ills populating the ham bands...

By ALL MEANS, please STAY on 11 meters with you similarly afficted bretheren, and leave Amateur
radio free of your contamination...

Thanks in advance...

: Sparky <fgillil@tincan.org> wrote:
: Whoa, you are WAY off base there, Skipp. Most of the broadcast
: transmitters I've seen (and I've seen a lot) are grid-modulated
: Class C jobs,

Hi Sparky,

I hate to take you to task... but first I must say that I'm not sure what the heck your talking about related to your above statement. Remember, you've got to be a little more specific so we can figure out what your trying to say.
Broadcast transmitters are changing so fast that you can not properly describe their layout and operation in general form. Most current broadcast transmitters I see are solid state monsters running hybrid class of service... more like D through H. Sort of a pulse format in generic terms. Older tube am transmitters were all over the place in their construction and modulation methods. Who's off base and why would you say that..?

: which is a bit more complicated than FM, but is a
: lot more efficient than plate- or screen-modulation.

I don't know what hat you pulled all that out of... but it's pretty off topic from what Phill and I were talking about.

: The newer
: solid-state transmitters use a similar method almost exclusively,
: but few are made for the higher kilowatt range due to the better
: reliability, simplicity, and cost-effectiveness of a good power
: tetrode.

They aren't using class C, it's all about hybrid designs and operation. Check your mic cord for a loose nut behind the radio... who knows where your going with all of this.

: Now if you are talking 'clean', that can be many things, such as
: linearity, IMD, harmonics, etc. All those factors have tight limits
: imposed by the FCC, and you will find that, all else being equal,
: a solid-state transmitter is just as 'clean' as anything else, and

If it is a type unit and passes required proofs, that's what matters. Throw out a few more off topic terms and we'll have some fun... what the heck.

: a bit more expensive to boot. And any good BC engineer would never
: put the transmitter right to the antenna without running it through
: an array of filters and traps to keep the signal spectrally clean,

: even when the transmitter is malfunctioning.

?????????? you got me there... I'm not sure what the heck your talking about.

Most single site transmitters I've seen pipe the rf right out the box to the tower. The proper filters are required inside the transmitter. External filters are added to prevent some type of problem or to aid in a combined tower operation. It's done every day...

: Philip's post is pretty accurate, Skipp, maybe you should do a
: little field work sometime.

Thanks sparky, I'll keep that in mind after I figure out what the heck your talking about. I guess I'm not getting enough field work... back to the corn I go...

skipp

> radios?

Swan aka Sillytronics used them for cheap. I was not aware Yayhoo did that much with them, most I saw used the Japanese version of the 6146A beam tetrode. Same difference in a lot of respects.

Both featured incredible grid sensitivity and therefore lower drive requirements. This will tend to make them skittish as hell, prone to parasitics, and very sensitive to overdrive. Swan had the only manual I ever saw that plainly stated that 6db of flat-topping never hurt anybody: the linearity of a sweeptube is suspect from day one and non-linearity causes harmonics. They were, after all, designed to do triangular waveforms or FM in Class C in the high band.

Neither liked grid current beyond maybe 3 ma and would do flakey things as the grid melted into the base.

And both were sideband rigs with a much lower duty cycle. They might do Ancient Mary but not gracefully. Swan beat the living shit out of them even in SSB, Yayhoo was kinder; but quick tune-ups were advised and advisable in both cases. Remember that GE compactron HOTs were fairly cheap and that is what an 8950 (right?) is.

Where it really got out of hand in the 1970s was with basement built line-ee-ars that used old TV transformers, six or so sweep tubes, a common parasitic choke (one per tube please) and a phonograph motor running a fan. These babies could blank TV sets for blocks.

: Philip de Cadanet <phil@invest.fsbusiness.co.uk> wrote:
: I could not find any reference to your 1640AM work on your sites link
: pages!

You won't... I don't bother with that bit of history. I have a few of the original QSL cards we sent out when the station first went on the air (sent to people all over the world) with my name on them... and that's pretty much it. Other than getting paid, there's not a lot of glory in behind the scene broadcast work.

: Also, I now remember speaking to you before - Kewet electric cars.

Yep, I have two myself...

: Are there 'ANY' commercially made low power (up to 100w) AM transmitters
: that use Pulse Width Mod?

I'm not sure... it's probably not that great a feature for the technical requirements. For that power level, I use a common balanced modulator chip and a push-pull linear final.

: I really would like a non iron AM tx and do not like going the low level
: and or linear route.
: Any ideas?
: Phil / London

Good quality designs/circuits will cost money... I think the linear route in lower power is the current trend. Check LPB and Radio Systems web sites to see what they are up to.

For me, it's easier to deal with a straight forward circuit than a more complex PWM in a low power <100 watt circuit. Less test equipment to drag around.

cheers
skipp

4401. FS or Trade:HR2600 MINT

Newsgroup: rec.radio.cb

HR2600 MINT with CHIPSWITCH installed,never been mobile,with all accessories that came with it,ie:box,manual,mount,mic,etc....also has had hi output "blue dot" final mods done...all professionally not by a "screwdriver wannabe" ,replaced the main final with a "blue dot" high-gain final. It is still a MRF477, but does about 10% more power. Also did the driver transistor (2sc2086) modification. It is listed on many of the 2510/2600 modification sites.Also mods were done to the balance modulator circuit to make the wattage variable to below 1 watt and "swing" to over 25-30 watts. SSB should be between 35-50 watts depending on your SWR match and the power supply used. One thing to know is that you can't run this radio on a normal 3-5 amp supply. It draws about 6 amps on AM and about 7.5 amps on SSB. For my testing I used a Bird Model 43 wattmeter connected to a dummy load, and a Astron 25 amp power supply adjusted to about 14.8 volts.(which is safe concidering a car running puts out over 14.5 volts) The SWR CAL knob adjusts both AM and SSB wattage.

$250 or possibly trade for another radio cb or 10 meter and some cash.....

Went thru that BS when Earthlink bought out my local ISP. Seems there are only about a half-dozen equally incompetent news servers that are generally hired to do the job.

Score one happy ATT customer should it come to that.

They are illegal in Baja, too. Regardless,

The main thing to remember is that if you can't hear them, a linear
won't do you any good. Focus on the antenna. A simple 9' whip is
about the best you can get, and they are cheap to boot. Tuning is
not as critical as you might think, and you probably won't notice
any difference if the antenna is an inch too short or too long.
Use good coax, not the foam type.

Another tip: if you are going to be playing in the sand, tape some plastic (saran wrap) over the speaker and plug up any holes very well.

Wrong again, brainless. If you look it up with the FCC -- that's
where the term originated -- you will see that Citizen's Band refers
to a radio service, not just the freqs for that service.

But Toll Free and Train tell us that these amps are legal (or
something like that) and that hams use them too (or something like
that) and that the FCC don't care about rules no more (or something
like that).

I am sorry to say Steve, you surely made a fool out of yourself with that statement. Our lawmakers think a nuff of it to have passed a Federal Law a year or so ago regarding CB usage and knowing the FCC was undermanned and understaffed delegated the right to other law enforcement agancies. But what would you care you think laws are inconsequential right?

No SD, it went like this Phil got played like a cheap whore. He had no info and thought he could get Aaron Voobner or one of the AKC to send him a copy of his drivers license. The way he figured Aaron & Co would want to know what "Secret Info" that Phil had, so that's why he wanted a copy of a drivers license, he would have your info but you would get bogus info if any in return. Pretty slick, but a set of well written fictional e-mails sent to him brougth the whole thing to bear. Phil bit on the info sent to him and tried to make a few assumptions based on this "secret Info" he collected. LOL ... All this over a CB radio ...Another One bites The Dust.

Hi Greg (and Steve),

Your a little off track Greg, but I'll try to add in some corrections
where possible.

: In rec.radio.cb G. Beat <gregory.beat@home.com> wrote:
: Typical amplifiers sold in the 1960's and 1970's really for the CB market,
: but marketed "under the disguise" that it is for amateur radio (10
: meter band).
: Be advised that these are not amateur type accepted amplifiers.

More accurate to say the amplifier is of a style sold in the 70's, often
made for the 25 to 54Mhz band which includes the CB Radio Service. The
unit shown is a current production unit... made in Italy if my sources are
right. More and more, they are starting to pop up on Ebay and the news
groups. This one is not a vintage item...
-
Nope, they are not type accepted, nor were most of the legal amplifiers
sold back before the ban. They just had to make a legal spec for the most
part. Operation of the mentioned in the US Class D CB Band is not legal.
-
Operation in other adjacent services is/was possible.
-
: The dead give-away is the 5 watt input. Many early versions used old TV
: "sweep tubes" for the finals and were of questionably spectral purity.
-
While not orignally designed for RF amplifier service, the common sweep
power tubes can be used in an amplifier and with proper design care can be
quite clean in a linear application. It's all about doing the
proper design homework...
-
: They did not call these TVI or RFI monsters for nothing.

who is "they"..? Most people don't do the ground work to build a proper
sweep tube amplifier. Like any and all poor built/operated circuits...
the parts can get a bad rap.

Sweep tube amplifiers can be made quite practical. Many of the various
companies have put out various models through the years. Swan, Yaesu,
Dentron, Amp Supply, SBE ... the list goes on. Some were not so hot...
some were pretty nice.

: Be especially cautious of any units that have
: been tampered with the "urban legend" to remove the band filtering for more
: power.

Any tampering period... how come we haven't seen this "urban legend"
label before..? Wait a minute.... I've seen some pretty dumb posts about
removing the modulation internal limiter of a radio, made by Bill ...
that's an urban legend that's a lot of crap. So we actually do have a
current example.
-
: More power everywhere, except where you want to be transmitting.
: A 5-element Chebyshev filter (1996 ARRL Handbook, p. 16.9) is always a good
: idea.
-
You can actually do ok with just the pi output if your practical. But the
additional filter is a welcome addition.
-
: Give the wide spread availability of the solid state versions (Palomar and
: other clones) why go tubes for regular operations.
: Now if you want a collectable item for "the era", cosmetically it looks to
: be in good shape.
: Greg
: w9gb
-
Because it's a current production unit... Sweep tube amplifiers can be
heaven or hell. Your results will probably be different.

4430. NYC Update

Newsgroup: rec.radio.cb
Date: 2001-11-05 21:52:31 UTC
From: webdoc@mailandnews.com
Message-ID: <de9751ca.0111051352.7f8c787a@posting.google.com>

Hey all, while I am in NYC with the Red Cross, I am going to take my license exam, 2 weeks from today I will be taking the test. Then I can go look for a place locally that sells radios. Since I will most likely be here until first part of December if not longer, I might as well put my license to use while I am up here eh?

From: Skipp <skipp@pilotNOSPAMPLEASE.ucdavis.edu>
Message-ID: <9s726s$150$2@woodrow.ucdavis.edu>
Source record: 103442

: Richard McCollum
: Swan aka Sillytronics used them for cheap. I was not aware Yayhoo did
: that
: much with them, most I saw used the Japanese version of the 6146A beam
: tetrode. Same difference in a lot of respects.
-
Actually, I heard from a Swan Siltronix source that the sweep tube was
kept in production mostly because of it's lower anode voltage
requirements. Yep, Yaesu and many others had their fingers in sweep tube
amplifier circuits. Swan and Siltronix folks liked them because they felt
they were safer than the higher voltage requirements of larger glass
tubes.
-
: Both featured incredible grid sensitivity and therefore lower drive
: requirements. This will tend to make them skittish as hell, prone to
: parasitics, and very sensitive to overdrive.
-
You can put all that down to the circuit design... Many companies have
been using them for years with little grief. They are not that big a deal
related to VHF parasitics.... to much anode C keeps them semi numb in the
VHF region.

: Swan had the only manual I
: ever saw that plainly stated that 6db of flat-topping never hurt anybody:

Back in the 60's, no one was hurt... the real world circa 1961

: the linearity of a sweeptube is suspect from day one and non-linearity
: causes harmonics. They were, after all, designed to do triangular waveforms
: or FM in Class C in the high band.
-
Again, with proper design and the right tube, they are quite a usable work
horse for "economy power level" amplifiers. "Don't shoot the horse
because the cowboy didn't know how to ride..."
-
: Neither liked grid current beyond maybe 3 ma and would do flakey things as
: the grid melted into the base.
-
AB1 operation with a common sweep tube is quite stable when done right.
-
: And both were sideband rigs with a much lower duty cycle. They might do
: Ancient Mary but not gracefully.
-
At reduced power level as all radios do... nothing special or unexpected
about early swan rigs.

: Swan beat the living shit out of them even
: in SSB, Yayhoo was kinder; but quick tune-ups were advised and advisable in
: both cases. Remember that GE compactron HOTs were fairly cheap and that is
: what an 8950 (right?) is.
-
The 8950 is a sweep tube actually designed for RF Operation, quite popular
and has a 12.6 volt heater. Normal operation as directed in most of the
Swan owners manuals did not shorten the expected tube life. Swan &
Siltronix radios were designed to tune the final at reduced input levels.
Check your circuits before you go there...
-
: Where it really got out of hand in the 1970s was with basement built
: line-ee-ars that used old TV transformers, six or so sweep tubes, a common
: parasitic choke (one per tube please) and a phonograph motor running a fan.
: These babies could blank TV sets for blocks.
: Dick
-
Now that I will hand you... but few were made in basements... many were
made in small factories right along side a legal radio line up. Some were
crap, some were pretty nice... depends on the mfgr.
-
It's smart money that can buy one of these units and rework it into a
better circuit for amateur operation. You can rebuild it as shown in many
of the ARRL Handbooks or copy parts of the design from mfgrs diagrams.
-
An improved Dentron GLA-1000 circuit is on the http://sonic.ucdavis.edu
amateur radio page. A quartet of 6LQ6 (or current production
Svetlana EL-509/519) tubes can be made to work very well in an RF
amplifier.
-
cheers

Check out HRO in Delaware. It's probably near enough to drive there, and the prices are good. If you're looking for a good 2M rig, the Alinco DR-135 has treated me well, even if the modulation is a bit "hot" on it. (Anyone have the adjustment info on this radio so I can turn mine DOWN just a hair?) The DR-605 is a good dualbander, as well. I have several friends in the area who have them, and they're thrilled with the performance. If I could have afforded a dualbander (this set runs about $350) I would have gotten the 605.

Good luck on the test, and hopefully we'll be hearing you on the air soon!

>HAHHAHALMFAO! Your concern is touching, chickenhawk.

You really don't know what a "Chicken Hawk" is do you? First of all chickens don't fly, have the brain power of an ant, and can't see any better than you do. In fact one chicken lived for almost a year without a head which proves they don't really even need a brain, and you appartently fuction without one as well.

http://home.nycap.rr.com/useless/headless_chicken/index.html
http://www.thisistrue.com/mike.html

On the other hand the so-called "Chicken-Hawk" has vastly superior flight skills, and eye sight second to almost no other winged creature. Couple that with it's keen hunting sense most birds are rightly afraid of the Hawk. So when you say "Chickenhawk" think "CB -> ChickenBand" and pray the Chicken-Hawks don't see you.

FYI, the chipswitch installation enables transmission on frequencies
not authorized to CBers, i.e. this radio is not legal to sell or use
on CB. Please see below. -Aaron-

ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be
subject to fines or imprisonment as well as equipment seizure and
forfeiture.--FCC

Hi Philip, I am not trying to put an "illegal spin" on your ad, but I am curious why it is posted ONLY in "rec.radio.cb"? If you are looking for a legitimate buyer, I would think that you might have posted this in some of the "broadcast radio" newsgroups. Or, if you are looking for a "pirate" buyer, you might have tried posting this in some of the "pirate radio" newsgroups.

Depending on how much he has to spend he could go right for a Yaesu FT-100D or the Icom IC-706MKIIG. Both rigs will let him do 3 bands, 6m - 2m - 70cm, all mode. Then when he upgrades he will have a mobile rig that will handle HF too. I think it's better to buy a bit more radio that you think you'll need so you don't out grow it so soon. Also many of the late model vehicles don't have room for two rigs, HF and V/UHF, much less even one. So the above two rig models helps save space.

Who cares, it's like saying hey everyone i have to poop!

Life is good to Cb operators who monitor channel 9

Meaningless Posts are reason to have your account Pulled. Just some
unfriendly advise.

Cb radio has been around for ages. don't you agree?

>"man where in the hell have you
> been?????? are you saying your precious ham bands are sqeaky fucking
> clean????"

Thanks for proving my point - AGAIN!

Of COURSE the ham bands aren't "squeaky clean" - we ALREADY have been infected by the avalanche of
CBers who took advantage of our "dumbing down" of the ham exams, and who now litter the ham bands
with the same juvenile and obnoxious profanity that seems to be YOUR main menu of "style"... The
more you spew your abusive stream of adolescent drivel, the more you help support my position...

DO continue...

No bright LED's It is just that I am trying to run 33 radios at the same time (so I can monitor other channels, don't want to get a scanner). Do not want you to think I was doing anything ILLEGAL. they each draw 4.8amps.

;-)

So Aaron Now that you know what I am doing is Legal what are your Ideas on how to do it. Or you don't know either?

Thanks Sylvester,

Well, now that you made it clear what it is you are trying to do,
things are much easier. That was pretty silly of you to be thrashing
about with questions regarding supply voltages when it has so little
to do with your ACTUAL application. But we have got you on the right
track now! OK. Contrary to what you may think, I do not know
everything. No one can know everything. And since I don't consider
myself an expert in receiver design I cannot give you a solution off
the top of my head. BUT.....I bet there are a lot of folks in here
that can help you design a reciever that will monitor 33 channels
simultaneously, or at least get you the info you need. For instance
many commercial receivers have multiple VFO functions. How about a
design based on that idea?

Anyone with ideas that might help get Sylvester's receiver project
going, please feel free to join in.

Whatever you do OM, do it outside and stand back when you flip the switch. Any resistor setup that can handle 24 volts at 160 amps is going to get really hot at 1 volt. Don't have my handy dandy calculator right now, but at 1 volt, amperage is going to generate one whale of a lot of heat. Good luck.

You can verify the existance of repeaters on the band at your local
communications shop (if they provide 11m service). And CTCSS tones
are easy to hack, you can do it with a cheap computer and a soundcard,
and I have used that a few times to service radios.

I have yet to see a Class D in service. Older AM tx racks are almost
a generic layout, and I even own one myself.

> I don't know what hat you pulled all that out of... but it's pretty off
> topic from what Phill and I were talking about.

In case you forgot, you stated that AM was easier to design than
FM, which shows that you don't know much about BC transmitters. As
I pointed out, most high-power tube-types are grid-modulated, which
is more complicated than FM. You also said that the newer rigs were
not as 'clean', which also shows that you know little about BCing,
because the limits are imposed on the station, not the box. Even if
the box meets FCC regs, the signal can become dirty before it hits
the pole. And as I said, it is up to the engineer to make sure that
doesn't happen.

Skipp, this is my job, I do this stuff every day. If you want to
argue these topics, fine, but at least try to read my reply in
context with what you posted, because that's how they are written.

Nobody is disputing that there are evils in the world, and that some
are worth pursuing with more vigor than others. However using
'relativism' as an excuse to only obey the laws you find it agreeable
to obey is sheer bunk. It's a looters mentality, i.e. "The
authorities have much more important things to do than track down
everyone who goes into this old warehouse through the broken window,
and besides, everyone's doing it".

Think you have overthunk the problem, Sparks. If you look at the licenses,
there ain't no way to run a repeater on the freqs assigned for broadcast
remote; they're just using two to give both a control line and a program
line for remotes. CTCSS if it is used at all does not help interference
problems, it is just a way for the local sludgepumper and the local mortuary

to share a channel without having to listen to each other. There are also far cheaper ways to develop the tones although if you have the compooter for programming why not.

than cb

In a lot of respects it isn't. Hand a bozo a mike and he is simply a louder bozo. Last time I checked there were no bozo filters on the license exam. That being said, the biggest diff is that I can escape the lumbago nets by doing a bit of digital or CW on 30 meters or phone on 15 or 17 or meet the locals on 12 when it isn't open worldwide. Helps to do it at 3 AM too.

Now that being said, so what? No good reason you can't do both if it tickles the gonies. Nor does assininity on one freq justify it on another.

Geez Skipp, do you make this stuff up as you go along? Sweep tubes
were built for TVs, not radio amps: They work great in the kHz range,
but are terribly non-linear at 27MHz. The result is splatter all over
the band, regardless of how many filters you pile on top. The only
way they worked (with any kind of usefulness) was with heavy negative
feedback, and the tubes burned up very quickly. At the time when
sweep tubes were cheap it was a poor-man's alternative -- definately
not true today.

How about hooking twelve 2-volt batteries in series instead? If you
can find a deal on power rectifiers, that would also be a cheap and
easy way to go (each rectifier in series drops the voltage 0.7 volts),
and if you are using two 12-volt or four 6-volt batteries, you don't
need that many rectifiers, just switch out a battery. Check a tractor
shop for lower voltage batteries.

>
> -Aaron-

A scanning CB transceiver would be the obvious solution. I have two
in my junk pile. But the current requirements seem a bit high: the
4.8 amp rating for a 4-watt CB? Hmmm... regardless, that's only on
transmit. When receiving the radio draws much less current, and I
don't think he will be transmitting on 33 radios at the same time.
But ok. Now, the radios draw even -less- current when there is no

signal and the radio is sqelched, something on the order of 50 to 300 mA per radio, assuming LED displays. So the minimum draw will be about 10 amps, and if he transmits on one radio that's another 4 - 5 amps.... hmmm... He doesn't really need 160 amps, does he?

> tubes.

That's total BS, Skipp. There are/were plenty of low-ep tx tubes
available, such as the 7984 and the 12JB6. Even the 6146 has a lower
plate voltage than the sweep tubes, which were usually rated for
1500+ volts because of back-emf on the flybacks. The only reason
these companies made amps using sweep tubes is because they were
cheap, even at the rate the amps would burn up the tubes. Sweep
tubes were NEVER used in ANY commercial radios because they didn't
compare to a real RF tube. You are making up stories again, Skipp.

Our lawmakers think a nuff of it to have passed a Federal Law a year or so ago regarding CB usage and knowing the FCC was undermanned and understaffed delegated the right to other law enforcement agancies. But what would you care you think laws are inconsequential right?

"It helps to actually know what one is rattling off about. Noise you make is inconsequential. The FCC delegated the right for other law enforcement agencies to pass their own laws to deal with it. So far, none have done so."

news:<9s6l3gkln2@woodrow.ucdavis.edu>...
Sparky <fgillil@tincan.org> wrote:
Whoa, you are WAY off base there, Skipp. Most of the broadcast
transmitters I've seen (and I've seen a lot) are grid-modulated Class C
jobs,

Hi Sparky,
I hate to take you to task... but first I must say that I'm not sure
what the heck your talking about related to your above statement.
Remember, you've got to be a little more specific so we can figure out
what your trying to say.
Broadcast transmitters are changing so fast that you can not properly
describe their layout and operation in general form. Most current
broadcast transmitters I see are solid state monsters running hybrid
class of service... more like D through H. Sort of a pulse format in
generic terms. Older tube am transmitters were all over the place in
their construction and modulation methods. Who's off base and why would
you say that..?
-
I have yet to see a Class D in service. Older AM tx racks are almost a
generic layout, and I even own one myself.

"Well, hell's bells..I guess this is as close as you can ever admit to
be being wrong as we'll ever see. At least you answered semi-honestly to
the question, "Why would you say that?" Your answer: "I have yet to see
one." I guess if you have never laid eyes on it, it must not exist
(chuckle).

I don't know what hat you pulled all that out of... but it's pretty off
topic from what Phill and I were talking about.

In case you forgot, you stated that AM was easier to design than FM,
which shows that you don't know much about BC transmitters.

"And you aptly demonstrated you know even less about repeater function
and operation."

As I pointed out, most high-power tube-types are grid-modulated, which
is more complicated than FM. You also said that the newer rigs were not
as 'clean', which also shows that you know little about BCing, because
the limits are imposed on the station, not the box. Even if the box
meets FCC regs, the signal can become dirty before it hits the pole. And
as I said, it is up to the engineer to make sure that doesn't happen.

"And none of the malarkey above is even remotely attached to the subject you were called on, therefore it is irrelevant."

Skipp, this is my job, I do this stuff every day. If you want to argue these topics, fine, but at least try to read my reply in context with what you posted, because that's how they are written.

"Your writing is on the same level of your comprehension, so it may need repeated at times to clarify your ramblings, as many have pointed out you are not clear on the majority of your posts and at times have difficulty expressing yourself. Giving you the benefit of the doubt for a second, you repeatedly feel the need to invoke your "work"among your posts, as if you believe that somehow lends you increased credibility. We're all still waiting for you to answer your claim of how RF piracy affects you in your work, that has to be one of the funniest wingdings you uttered yet."

what would you use to vari dc voltage from say 0-24 volts and still
handle about a 160 amps. like if you were to hook 2 - 12 volt batteries
in series and then want to drop the voltage down variably.
get the Idea?
Sylvester

How about hooking twelve 2-volt batteries in series instead? If you can find a deal on power rectifiers, that would also be a cheap and easy way to go (each rectifier in series drops the voltage 0.7 volts), and if you are using two 12-volt or four 6-volt batteries, you don't need that many rectifiers, just switch out a battery. Check a tractor shop for lower voltage batteries.

"Sparky, many of us are not interested in doing things cheaply. Your mere suggestion of cheap and easy may send an incorrect but involuntary and subliminal message to many concerning your techniques."

Sparky related:
A scanning CB transceiver would be the obvious solution. I have two in my junk pile. But the current requirements seem a bit high: the 4.8 amp rating for a 4-watt CB? Hmmm... regardless, that's only on transmit. When receiving the radio draws much less current, and I don't think he will be transmitting on 33 radios at the same time. But ok. Now, the radios draw even -less- current when there is no signal and the radio is sqelched, something on the order of 50 to 300 mA per radio, assuming LED displays. So the minimum draw will be about 10 amps, and if he transmits on one radio that's another 4 - 5 amps.... hmmm... He doesn't really need 160 amps, does he?

"Not if he does it your way."

4492. Re: Can you tune your antenna without a swr meter ?

Hello Frank: I'll have to grade your replies wrong as usually, your lack of hands on experience and knowledge is way out to lunch here, and pretty obvious.

Perhaps hitting the books a little more with some hands on testing will help. Remember to document all your work, write neatly, use good coax, and have your radio chassie grounded.

Have a nice day.

Hi Dick,
I haven't thought about repeaters in the "freeband" area, but I would think that, even if it is legal,
it would cause more interference rather than actually enhance communications. You and I both know that the 10 meter ones don't work very well, often creating a hodge podge of noise. But since this would be considered an ":experimental" form of communications in the Amateur Service, it is a mode that many hams happily engage in. Even I do so, but I can only stand the racket for
about 20 minutes! LOL! According to the post Sparky made in this thread about "enhancing"
DX for freebanders, I am given the impression he has not much knowledge of how repeaters
work. IF freebanders were keying up repeaters (sincerely doubt their existence), they would
not know it because of the duplex nature of their operation, and such would not "enhance" their
DX--only jamming traffic of legitimate users. But IF there are repeaters, then I would think they
would be tone access.

Sparky said:
You can verify the existance of repeaters on the band at your local communications shop (if they provide 11m service). And CTCSS tones are easy to hack, you can do it with a cheap computer and a soundcard, and I have used that a few times to service radios.

"I'm not aware of any repeaters being utilized on the freqs you suggest, but that doesn't mean it isn't being done. A bunch were involved with messing around with a repeater (it WAS their repeater, yes they knew it was illegal) on channel 16 many moons ago. It was a short lived incident and interest waned quickly, but it did yield some interesting results for a few nights."

Oh No, say it isn't so?
Yup, things are still on a roll, my little friend in Pa.
still just doesn't get it through his head:
Changing screen names to by pass newsgroup users
filters is against @Home TOS.
So if anyone else cares all you have to do is save
each "meaningless" post complete with headers. When
he's has changed his screen nic enough to hang himself,
send it to Abuse@home.com, they are willing to request
him to stop, if he continues after the request they will
take away his @home posting rights.
Now he does use newsreader now to offset this,
so he will be there, but it's a lot harder to open and
remember all those free accounts, so running a killfile
on him is easier.

Landshark

PS, I'm sure this will bring some sort of nice
response from him, who cares "PLONK"

Interesting Aaron (Dwight or whom ever you are)
Not any where in his ad does he state that it is, or
will cover the CB band. So again, he might have been
a new ham, used it for a short while and decided to
move on, another illegal spin on something totally
legal until proven otherwise in a court.

You say that child beating should take a backseat to
breaking FCC rules??? You are truly a sick person,
you would rather see a CB'r busted over a child beater,
murder, rape suspect being prosecuted, shows what kind
of small troll like world you live in.

> > and this
> >is the answer. I say, become an FCC official and
> >you can come out here and try to bust all the people
> >you want, until then you can do nothing other than
> >try to troll.
>

Sure you do, you know you want to be able to go up
and say "Hum, Dwight from the FCC, I am here to confiscate
your equipment and give you a NAL. All the while in the
background someone is getting robbed, drunk driver killing
a person in the cross walk, more important crimes happening, yup, you have a
great life.

Source record: 103516

: Sparky <fgillil@tincan.org> wrote:
: That's total BS, Skipp.

Sparky, what planet do you come from..? Tell us how you know so much about the reasons mfgrs made choices like using octal base and sweep tubes in ham/cb radios and rf amplifiers? I'll tell you the source of my information... Herb of Swan fame (sk, rip).... ever heard of him..? How about Sam of Siltronix fame..?
Check the http://sonic.ucdavis.edu/siltronix web page when you have a moment. A lot of real history right from the sources. Then come back and support your statements with real information.

: There are/were plenty of low-ep tx tubes
: available, such as the 7984 and the 12JB6.

You are brain dead... what kind of tube is the 12JB6..? they are all in a similar class - family style. Beam power tubes, horizontal output tubes, sweep tubes... many can often be made to do similar things.

Now, check the cost of 7984 in the 70's vs the 6LQ6 or the 8950. I was buying flats of the 8950's retail for a few dollars each (god I wish I could still buy them for that now...)

: Even the 6146 has a lower
: plate voltage than the sweep tubes, which were usually rated for
: 1500+ volts because of back-emf on the flybacks.

Ahhhhhhhhh..... looks like your an old tv type... that's the reason your so off base. Again, look at the cost of a 6146 vs a 6LQ6 in 1978. If you bother to check, you will see the common 6LQ6 or 8950 rf amplifier an anode voltage range of 500 to 950 vdc. Only tube roasters like the Dentron GLA-1000 would crank them up to 1200 vdc. A real potential for trouble unless you put a measure of protection in place. That protection is described on the sonic server "Dentron Upgrade." If 6146 and 7984 tubes were lower in cost, I'm sure more amplifiers would have been made with said as the chosen valve. We do see many amplifiers that were made with all the above mentioned tube types... but the shear quanity of sweep tube amplifier production is quite noteworthy. It continues to this day, the era of solid state. You might tell us why that happens sparky..?

By the way... I know of no rf amplifier with flyback on board.

: The only reason
: these companies made amps using sweep tubes is because they were
: cheap, even at the rate the amps would burn up the tubes. Sweep
: tubes were NEVER used in ANY commercial radios because they didn't
: compare to a real RF tube. You are making up stories again, Skipp.

And you are a bozo Sparky... but you might be half right about one thing, the relative low cost of the sweep tube. Many Companies made amplifiers with both sweep and more common zero bias triodes. That started in the 60's and actually continues to this day.

By the way, we are talking Amateur and CB radio here, not commercial radios. There is quite a difference... but if you also bother to check, some Companies did make HF radios with similar family tubes. But again, we were talking sweep tube amplifiers, not commercial radios. Don't stray too far off topic.

Keep in mind that the 8950 was developed by GE as an actual rf output sweep tube. Don't forget that many an audio tube made it's way into rf service (the 6L6 as an example). This stuff is not made up... welcome to the real world and get off the decafe.

We see these Italian made K1313, KL and KLV type amplifiers imported and sold because they can be made cheap enough. We also see rf amplifiers by Alpha Crosslink and Ameritron at the other end of the price range. One can simply find something that works for their own requirements. You can go back to working on tv sets while we talk real history on the news group.

Depending on how much he has to spend he could go right for a Yaesu FT-100D or the Icom IC-706MKIIG. Both rigs will let him do 3 bands, 6m - 2m - 70cm, all mode. Then when he upgrades he will have a mobile rig that will handle HF too. I think it's better to buy a bit more radio that you think you'll need so you don't out grow it so soon. Also many of the late model vehicles don't have room for two rigs, HF and V/UHF, much less even one. So the above two rig models helps save space.

You are quite the bafoon Sparky... your follow up posts read just like the "grouchy ham hit the road types" mentioned on the last page of the http://sonic.ucdavis.edu/siltronix web page.

: Geez Skipp, do you make this stuff up as you go along? Sweep tubes
: were built for TVs, not radio amps: They work great in the kHz range,
: but are terribly non-linear at 27MHz.

Just because a device was designed for one application, doesn't mean it won't work well for other circuits. Sweep tubes can and do preform into the lower VHF spectrum.
Your terribly non linear statement is crap... They can and have been used in linear rf amplifiers that exceed past and current fcc spectral requirements, thus some could receive type acceptance numbers on the chassis (pre fcc 10 meter ban era).
Companies like Swan, SBE, Yaesu, Dentron, Amp Supply and others did a fine job making low cost linear rf sweep tube amplifiers. But of course, you know everything...

: The result is splatter all over
: the band, regardless of how many filters you pile on top. The only
: way they worked (with any kind of usefulness) was with heavy negative
: feedback, and the tubes burned up very quickly. At the time when
: sweep tubes were cheap it was a poor-man's alternative -- definately
: not true today.

I guess all the amplifiers I have working (on 10 meters) with their original sweep tubes need changing and an extra filter or two on board? Your lack of actual experience using sweep tubes in rf service is quite evident.
Something will have to be done... my restored sweep tube amplifiers are actually cleaner than my non modified type accepted Amateur Radio. I guess my spectral display tests are off the mark again... darn Agilent and original HP gear didn't hold up when I spilled coffee in the front panel...

I hate to rain on your faulty technical parade, but few if any of the above mentioned Amateur Radio - Company made rf amplifiers have negative feedback. You blow a lot of smoke there buck'o...

I do suggest most sweep tube amplifiers have a bit of degeneration installed as described in the Dentron Article above. But you can take your negative feed back back to your first year electronics class and

learn the difference between it and degeneration.

You might want to jump in with the neutralization crowd in your next post for a different angle. Darn sweep tubes in amplifier service seem to be working much better than you say they should.

Life goes on...

Yeah, let's review that page:

>Many Hams are/were often very stuffy and hard to deal with
>when intersted people from the CB ranks ask about Amateur
>Radios.

Sure I bet many hams get stuffy and hard to deal with when they're
told "I already talk on freeband. Now I'd like to get on ham".

>Regular people did not want to become Electronic Engineers
>just to enjoy a radio hobby and were often quickly put off
>by their first exposure grouchy traditional "learn it like I
>did or hit the road" types.

Yes it must be so inconvenient to be compelled to grapple with the
alarmingly technical content of the amateur written tests. Gosh, why
can't everything be like CB - no test, no rules, no effort? Boy, those
grouchy old hams. Imagine disapproving of instant gratification. I bet
they were even sticklers about obeying laws too.

>am curious why it is posted ONLY in "rec.radio.cb"?
It was not:

rec.radio.swap
uk.rec.radio.amateur
misc.industry.electronics.marketplace
uk.adverts.other
uk.tech.broadcast
uk.rec.radio.cb
alt.radio.pirate

> If you are looking
>for a legitimate buyer, I would think that you might have posted this
>in some of the "broadcast radio" newsgroups.
My ISP only subscribes to one: rec.radio.broadcasting

Now what makes you think I was not looking for a legitimate buyer?

The unit was an FCC approved commercially made broadcast transmitter.

Here in the UK we have RSL's (Restricted Service License) allowing 1w
erp.

In the US you have at least one 'free radiating' license suitable for
colleges etc.

There are people in all of the above ng's interested in this piece of
equipment.

It sold to a UK buyer who is interested in hiring it out to RSL
operators. The license only allows 28 day operation!

So Aaron can you tell me where I went wrong?

PS. It made $380.00 US which I'm more than happy with.

Source record: 103532

@home AUP for newsgroups.

Newsgroups

Messages posted to newsgroups must comply with the written charters or FAQs for those newsgroups. Advertisements, solicitations, or other commercial messages should be posted only in those newsgroups whose charters or FAQs explicitly permit them. You are responsible for determining the policies of a given newsgroup before posting to it.

Posting or cross-posting the same or substantially similar messages to more than eight newsgroups is prohibited. Our news software will automatically cancel any messages posted to nine or more newsgroups.

Binary files may not be posted to newsgroups not specifically named for that purpose. Users posting binary files to groups with policies concerning the permissible daily volume of posted files are required to observe those limitations.

Forging, altering or removing header information is prohibited. This includes attempting to circumvent the approval process for posting to a moderated newsgroup.

The @Home network reserves the right to discontinue access to any Usenet newsgroup at any time for any reason.

You may not attempt to "flood" or disrupt Usenet newsgroups. Disruption is defined as posting a large number of messages to a newsgroup which contain no substantive content, to the extent that normal discussion in the group is significantly hindered. Examples of disruptive activities include, but are not limited to, posting multiple messages with no text in the body, or posting many follow-ups to messages with no new text. Messages may not be canceled, except by the author or by official newsgroup moderators performing their duties.

The Usenet news service included with an @Home residential service account is provided for interactive use by the subscriber, using a commonly-available NNTP client such as Netscape Communicator. Non-interactive clients which download Usenet articles in bulk are prohibited.

LOL, Boy someone get this guy a hankie, I don't know what ever gave you that idea but you had better read @home AUP, this is not a moderated group slime bucket. My account can change screen names as much as we see fit.

Its all about Cb Radio, Don't cha know it.

According to your wonderful post Bubba, i consider these useless posts to the CB newsgroup "disruptive", and truly contain no "substansive" content either. The useless TOS scripts have been posted by countless others with too much free time before as well.

Thanks for all the input, but perhaps I should have made myself more
clear, what I am looking for at the moment is either a 2 meter HT or a
dual band HT, since it would be rather difficult to operate a mobile
unit without a car hehehe. I have found 2 places in NYC that deal in
amateur radio equipment, one I found by accident, when looking for
another one that had gone out of business, the place I had been
looking for was the "Radio Depot" on 36th btw 5th and 6th, it was on
the 6th floor, what I found instead was Communication Telecom
International in the same building on the 10th floor, they were
friendly, but do not carry much in stock, when I am ready to buy I
would rather get it the same day I buy it. The other place I found was
Barry Electronics Corp. which Bert told me about the other night when

we spoke on the phone. I will check them out later this week.

I don't need anything fancy, repeater capability and easy programming is what I am looking for.

Anyway hope everyone is having a good evening, I enjoyed having the day off, walked around the city a bit, rode one of the double decker tour buses, and enjoyed a good dinner at the B.B. King club on 42nd.

Ah say, son, y'all ain't been 'round chickens much, have you. LOL! Fer
one, ah seen many a chicken roost in tall trees, an' ah has to ax; how d'ya
thank them' ere chickens got up 'ere? Yessiree, bob, them chickens FLEW up.
We used to 'ketch' 'em by straightenin' out a clothes
hanger war (wire) and hookin' 'em 'round the laig (leg). Ya see, if ya
tried to run 'em down, it
was pert' near impossible cuz if ya DID git close to 'em, they'd take off
flyin' and light down
about 50 feet away! As long as ya walked in the lot right easy like, and
didn't let on none, they'd
pay ya no 'tention as long as ya made no sudden moves. That way you could
whup out that
'laig' (leg) hook an' grab one uv 'em around the foot before she knowed
what happened! LOL!

Seriously, Leland, this is just a humorous rebuttal to your "knowledge"
about chickens. I was
raised in the southern countryside where chickens were a part of most every
kid's life. Chickens
can, indeed, fly and fly quite well IF the farmer hasn't clipped their
wings. You see, if you let them
keep their wings, they'd fly over the fence and go "set" out in the woods.
Their instinct was to
hatch their eggs, so if they got away, you'd play hell finding your layers.
They are experts at
camoflage, and once settled in a good nesting spot, you would walk all over
them and never find
their nest. Chances are, the farmyard chickens you have seen had their
wings clipped to prevent
this-especially if part of your daily bread depended on the eggs and meat
the chickens provided!
Sometimes, there would be a few hens that were allowed to roam freely around
the yard. Often
these hens weren't clipped. If they didn't have "dibbies" (baby chicks)
they would roost in the
trees, easily flying up into the tops of these trees as dusk fell. As to
stupidity, well, there's another
myth. While they aren't exactly mensa material as far as birds go, they DO
know when to come in
out of the rain. A domestic turkey (the white ones raised for meat) will
quite literally stand out in
a driving rain looking up with their mouths open and drown if not shooed
inside! Which is why
they are, in addition to chickens, usually raised inside buildings.

I know this is off topic, but perhaps it will provide a little respite from the arguments! LOL!

Jerry

>HAHHAHALMFAO! Your concern is touching, chickenhawk.

You really don't know what a "Chicken Hawk" is do you? First of all chickens don't fly, have the brain power of an ant, and can't see any better than you do. In fact one chicken lived for almost a year without a head which proves they don't really even need a brain, and you appartently fuction without one as well.

http://home.nycap.rr.com/useless/headless_chicken/index.html
http://www.thisistrue.com/mike.html

On the other hand the so-called "Chicken-Hawk" has vastly superior flight skills, and eye sight second to almost no other winged creature. Couple that with it's keen hunting sense most birds are rightly afraid of the Hawk. So when you say "Chickenhawk" think "CB -> ChickenBand" and pray the Chicken-Hawks don't see you.

Hi all,
I have a nice PRO-2006 scanner that seems to have a minor problem?...The battery light keeps flashing even though I have replaced the battery several times with a new battery? It never stops flashing?....Does anyone have an idea on how to fix this problem or what it could possibly be?..
Any help would be greatly appreciated!
Thanks-Russ

And you use toilet paper in your typewriter, too, huh? I never said
no amps were made for sweep tubes, I said they are non-linear when
used as an RF amp. And they are. I also said they can be made to
work with a reasonable amount of linearity, but not very efficiently.
AND I also said that if they are not linear, no filter will make
them linear. Why do you insist on putting words in my mouth?

> working much better than you say they should.

I would like to see your data, because I haven't seen a sweep tube amp that didn't have spikes up the spectrum or noise sidebands less than 200kHz wide.

Now where did I say that degeneration = neutralization = negative feedback? I didn't. But it's obvious that you don't know what the terms mean. 'Neutralization' is degeneration included so to prevent oscillation. 'Degeneration' is any type of method used to limit the open-loop gain of an amplifier, and includes 'negative feedback'. And if you take a real good look you will see that the 'neutralization' added to an RF amp is usually in the form of 'negative feedback'. Degeneration is used to reduce distortion, and is usually done with either a cathode resistor or negative feedback. If distortion is heavy, as in the case of sweep tubes, both should be used.

Also, you seem to be under the mistaken impression that just because an amp was mass produced by a well-known company that it necessarily -must- be a good design. Corporate America has provided many examples proving that to be false. But I'll tell ya what, Skipp: You provide just -one- example of a commercial radio that uses a sweep tube for the RF final and I'll eat my words. I'm not talking about junk made for some impoverished amateurs, but radio equipment meant to be used in a commercial radio service. Just one. How about it?

Well, let's see, the 7984 was developed specifically for mobile VHF, and the 12JB6 was built for low HF, and neither of them, including the 6146, have the ability to be used as a sweep tube. Now there are AF amps using tubes like the 4CX250, but I don't think you will see an old 6F6 used in the VHF range too often. So where do you come up with the idea that these tube applications are so widely inter-changeable? Just because a few amps were built with tubes that worked half-assed on the radio spectrum?

And by the way, we are talking about tubes used in RF amplifiers, so why do you think commercial radios should be excluded from this discussion? Because they don't use sweep tubes? Well that's exactly my point, Skipp.

Now, maybe you can reference where you found that GE developed the 8950 as an "RF output sweep tube"? And what the hell is an "RF output sweep tube" anyway? Did they make CRTs that worked in the VHF range, too?

Also, the maximum anode voltage for the 6146 is 750 volts, which is 200 less than the 500-950 range you gave for the 6LQ6 or 8950, and which proves wrong your statement that they had lower anode voltages. How do you manage to keep posting when you contradict yourself so

often?

Care to be a bit more specific as to what was 'obviously wrong'?

BTW, did you ever find out if your radio was a Viking or Valiant?

That works for me. But it still doesn't exclude freebanding as the
cause of some of the interference that some of these licensees are
getting.

With my limited cb experience in the mountains of Baja, my group has had little luck when one guy is down in a valley and everyone else has gone over another ridge. Of couse our cb set ups were a piece of crap-that is why I am getting a new setup, and trying to get my 2 other buddies set up correctly. With good equipment will we have better luck ? What should we expect as far as performance. Thanks a lot to all who have answered my previous questions.

There's no way of knowing how good or bad your installation was, but ideally you would have a 1/4 wave whip antenna with a nearly flat standing wave ratio. With that, line of sight should work well, but if you are talking to someone over a sizable hill, nothing on 11 meters is going to work well, regardless of antenna or power. This is a job for a much lower frequency.

I have to jump in at this point as well. Tubes truly designed for sweep service had terrible parasitic problems going back to 17 inch screens and the 6BG6. They were known as Barkhausens and you could see them on the left side of the screen. They occured again with the 23 inch rectangular CRTs and again in solid state units. That ferrite bead is not on the HOT without reason. They tend to be destructive of tubes as well as a major pain in the drain to any receiver in the vicinity. Big Cs have little effect when they are a half-wave from the plate cap.

If one chooses to introduce negative feedback or degeneration, doing it by lifting the cathode above ground is not the way to do it. The 6146 has three cathode pins and the sensible designer bolts, screws, rivets, brazes, welds, solders, and glues all three of them firmly to chassis ground. Similar issue with the grids of the 3-500Z in GG-B service. The LQ6 has 2. Yes, Skipp, most things can be designed around and in fact have to be to make a price point, but execution is the key as the distinctly stodgy engineering at Toyota proved years ago. You insist on repeating variations of the First Rule of Aeronautical Engineering: if the customer has the time and money, bricks can be made to take wing.

I, too, would love to know what an rf sweep tube might be.

The 6L6 was part of a family that included V, F, K, W, and some I have likely left out and was probably the worst audio tube among them. The commercial version was the 5881. As a transmitting tube it was better than a kick in the head but was replaced rapidly by later and better designs including some sweep tubes. As an oscillator it ate crystals, as an amp it pooped out a bit by 20 meters and was nearly kaput on 10, and it made a really crappy VFO due to inadequate screening. There were tons of things made with them and with the 807/1625 that were in large measure 6L6s with plate caps but that hardly makes them the epitome of the art. As one fellow described Volvo's: as strong and solid as the rock of Gibraltar and just about as fast. So far as I know, none of the family except the 6L6 was ever used at r.f. although the 6AQ5, the seven pin 6V6, was a fairly popular CB output in the empty-state days.

Incidentally, having plate, screen, and grid on consecutive pins made for some interesting lead-dress problems which the 6146 avoided. See what I mean about execution?

Yes... you seem to be saying that the guy who used the name "prozac" a while back was probably in need of drugs to keep him mentally stable.

Do you know that guy well?

^
^ <snipped>

Lets get straight to the main points... You say:
1. CBers using CB provide cover for terrorists to use it.
2. They will hear each other over the noise, but nobody else will.
3. You "suspect" they use CB for local comms.
4. Terrorists use handhelds.
4. Only terrorists would understand their language.
5. Terrorists also use all other forms of communication.

You seem to have more "knowledge" about terrorist activities than the FBI, I would be interested to know what experience you base this "knowledge" on.

To try using a large KW signal as cover for a small hand held signal could be so effective that they would get a greater range from their voices... without any extra comms tools. Have you tried "talking over" two very powerful signals using handheld CBs???
To pull off a timed "action" requires a clear, private, and reliable communication system, not the "hit or miss" of CB.

But, let's face it, if they can hear each other, then someone else could hear them. So, this leads to the question of "who would understand their language"....
Do you believe that ALL people from the middle east are terrorists?
Maybe you think that all Muslims are terrorists, or support the murder of innocent people.
Most Muslims condemned the attack, and hate terrorism. Many of these people could also end up as victims in a terrorist attack, Bin Laden would not warn every one of them before an attack.
The terrorists could not assume that anyone speaking their language would support their actions, because most would not.

The only way to cure what YOU see as the "cover" problem would be to stop using the frequencies totally... But as you say they also use ALL other types of comms. The level of use of these services makes a terrorist message like a needle in a haystack.
So public use of telephones, post, internet, e-mail, and newsgroups would also need to be stopped. Even newspaper "ads" could be used to pass coded messages, so this would have to stop.

Do you believe that Americans should let these people terrorise them back to the stone age??

Regards,

Brainbuster.

Multiple posts of the same message provide great cover for secret terrorist messages in newsgroups.

I blocked some of them a long time back, purely because of their tactics and offensive language. Some have gone straight in the killfile without me ever exchanging words with them, as their intentions and attitude are so very obvious.

Correcto mundo. To make it worse, even CB quality Ancient Modulation
doesn't do much to a wideband FM receiver and 20F3 is too broad for an
envelope detector so they just make noise for each other and never know why.

I'm sorry you conveniently left out
one thing:

sky444nospam@mint.net (Skyhawk) wrote in message
news:<3be6de6b.300090009@news.mint.net>...
HR2600 MINT with CHIPSWITCH installed,never been mobile,with all accessories
that came with it,ie:box,manual,mount,mic,etc....also has
had hi output "blue dot" final mods done...all professionally not by a
"screwdriver wannabe" ,replaced the main final with a "blue dot" high-gain
final. It is still a MRF477, but does about 10% more power. Also did the
driver transistor (2sc2086) modification. It is listed on many of the
2510/2600 modification sites.Also mods were done to the balance modulator
circuit to make the wattage variable to below 1 watt
and "swing" to over 25-30 watts. SSB should be between 35-50 watts depending
on your SWR match and the power supply used. One thing to know is that you
can't run this radio on a normal 3-5 amp supply. It draws about 6 amps on AM
and about 7.5 amps on SSB. For my testing I used a Bird Model 43 wattmeter
connected to a dummy load, and a Astron
25 amp power supply adjusted to about 14.8 volts.(which is safe concidering
a car running puts out over 14.5 volts) The SWR CAL knob adjusts both AM and
SSB wattage.

$250 or possibly trade for another radio cb or 10 meter and some cash.....

Well this is from one of their sights:

Updated September 26, 2001

You may not reference the @Home network (e.g. by including "Organization: @Home" in the header or by listing an IP address that belongs to the @Home network) in any unsolicited email even if that email is not sent through the @Home network.

Newsgroups

Messages posted to newsgroups must comply with the written charters or FAQs for those newsgroups. Advertisements, solicitations, or other commercial messages should be posted only in those newsgroups whose charters or FAQs explicitly permit them. You are responsible for determining the policies of a given newsgroup before posting to it.

Posting or cross-posting the same or substantially similar messages to more than eight newsgroups is prohibited. Our news software will automatically cancel any messages posted to nine or more newsgroups.

Binary files may not be posted to newsgroups not specifically named for that purpose. Users posting binary files to groups with policies concerning the permissible daily volume of posted files are required to observe those limitations.

Forging, altering or removing header information is prohibited. This includes attempting to circumvent filters for posting to a newsgroup.

the @Home network reserves the right to discontinue access to any Usenet newsgroup at any time for any reason."

So unless they are lying, I would think what is
written should suffice.

Landshark, Prodigy your service provider is very clear on this issue. A case is being built as we speak.

Prodigys Terms Of Service
****
Off-topic activities - posting notes or articles to any Chat room, Newsgroup, Mailing List or similar forum which are off-topic;

Harassment - targeting others, with the apparent intention of causing distress, embarrassment, or other discomfort. Examples of this include expressing personal attacks on members and non-members; sending more than ten similar messages to the same e-mail address; or sending more than 1M bytes of data to a newsgroup;
****

This Landshark guy is a lying sack o shit. Snipping key parts off @homes web pages and adding his own spin to suit his own agenda, of harrasement to other users. This is the real AUP, while the other guys edited version is below.

Updated September 26, 2001

Newsgroups

Messages posted to newsgroups must comply with the written charters or FAQs for those newsgroups. Advertisements, solicitations, or other commercial messages should be posted only in those newsgroups whose charters or FAQs explicitly permit them. You are responsible for determining the policies of a given newsgroup before posting to it.

Posting or cross-posting the same or substantially similar messages to more than eight newsgroups is prohibited. Our news software will automatically cancel any messages posted to nine or more newsgroups.

Forging, altering or removing header information is prohibited. This includes attempting to circumvent the approval process for posting to a moderated newsgroup.

> not true today.

Some TV's used 807's for the Horizontal output, and the tubes are NOT
built for a 15 KHz bandwidth. A Horizontal output is a PULSE
AMPLIFIER. Several of the early B&W Sweep tubes were IMPROVED 807's,
with modern bases so they could be made cheaper, and with the same
equipment other consumer tubes were built. Is the 8950 a TV tube?
Yes. It's the 6KD6 with a 12 volt filament. Several tube manuals
simply list the filament specs, then tell you to use 6KD6 Specs, because
they are built with the same internal components. As fare as being
non-linear, EVERY amp has some non-linear properties. After all, they
are used in the real world, not just on paper. By the way, some early
color TV's used 6146's for sweep tubes.

Source record: 103591

Correct, but one question isn't the name and addy
part of the header? Of course it is, that's one reason they
have asked for the "complete" post. They have also indicated
to me via e-mail that changing screen nics to by pass newsreaders filters is
a form of harassment.
That is why I posted it the way I did, I kill filed my
little friend well over a month and 1/2 ago. When he figured
that out he started changing his screen name again to just
by pass newsreader filters. I asked Abuse@Home about
this and they said to me that indeed that was a form of
making people read what they posted and could be
construed as a form of harassment, if it was proved that he
was doing it purposefully to by pass newsreader filters.

You forgot the radio IE: Remember during WWII
the BBC would broadcast to partisans secret
messages. Like Aaron has a long tail, people in
pa have leaking trailer homes, so each message
meant some thing to certain partisan cells.
So maybe that deodorant commercial has
a secret message or restaurant or rug shops
ad has secret messages.

4585. Re: Alan K1313 Amp 130w??

Newsgroup: rec.radio.cb
Date: 2001-11-07 18:40:11 UTC
From: Skipp <skipp@pilotNOSPAMPLEASE.ucdavis.edu>
Message-ID: <9sbv6b$l0i$1@woodrow.ucdavis.edu>
Source record: 103598

Sparky,

If you feel the need to reply... try to learn to delete some of the
previous post text out of your reply unless it's directly related. Even
with my super fast computer, it's a pain in the pazzoo to scroll down
three pages to read your one very misleading paragraph.

: Sparky <fgillil@tincan.org> wrote:
: Well, let's see, the 7984 was developed specifically for mobile VHF,

Again, you go off topic... aside from you, where did anyone start talking
about VHF Mobile Radio..? The 7984 is a boaring tube... lots of boaring
tubes were made. Stop trying to compare commercial radio (continous
duty style) types to the common sweep tubes found in the related
amplifier topic.
Man, your just all over the place... each time you post.

: and the 12JB6 was built for low HF, and neither of them, including
: the 6146, have the ability to be used as a sweep tube.

We're not using them in TV sets goof ball, again we are talking about
sweep and beam power tubes used in a classic HF Amplifier layouts.
Similar tubes can and do preform up toward 50Mhz pretty well.

: Now there are
: AF amps using tubes like the 4CX250, but I don't think you will see
: an old 6F6 used in the VHF range too often.

Yada, yada, yada... man you move off topic more than boobner-voobner (not
his real name) does. And I believe the 6F6 is probably not a sweep or
beam power tube.

: So where do you come
: up with the idea that these tube applications are so widely inter-
: changeable? Just because a few amps were built with tubes that worked
: half-assed on the radio spectrum?

Your unsupported opinion. I guess all the All the Amateur, CB, Marine
Radio and amplifier products made through the years are "half-assed."
All those mfgrs are wrong and your right..?
Of course your many produced products and supporting evidence (which seems
to be missing) prove you know all. Go back and look at the mfgrs list in
my last post. It's hard to belive all those designers didn't know
what they were doing and you know better.

: And by the way, we are talking about tubes used in RF amplifiers,
: so why do you think commercial radios should be excluded from this

: discussion?

Because the Mode, Duty Cycle and Frequency Range are most often quite different. Like Ms Cleo says... "but you knew dat..!" ... and it gives you a reason to try and vary off topic. You compare items which are quite different and make generalized statements that prove your lack of experience in the actual topic.

: Because they don't use sweep tubes? Well that's exactly
: my point, Skipp.

See my reply just above... I know of no tv set and few amateur (or cb amplifiers) which used commerical radio final tubes of similar rated values. They just plain cost more because they were optimized for different applications. Commercial and Amatuer Radio amplifier applications are most often quite different.

: Now, maybe you can reference where you found that GE developed the
: 8950 as an "RF output sweep tube"? And what the hell is an "RF output
: sweep tube" anyway? Did they make CRTs that worked in the VHF range,
: too?

My TV set never had an SO-239 coax connector on it... If your motor burns to prove people wrong, you take the time to dig up the 8950 data sheet and tell us what the application data says. It will also answer your second question. Rather than go back to your TV town topic... I'd just like to suggest that you get rid of your tube tv and try a solid state set... consider spending the money on Cable while your there.

You throw out all these off topic challenges... how about you dig up an 8950 data sheet and try to prove me wrong. I've never... ever seen a TV set with an 8950 tube inside. Not to mention it has a 12.6 volt heater. Get a clue sparky... your way off base.

: Also, the maximum anode voltage for the 6146 is 750 volts, which is
: 200 less than the 500-950 range you gave for the 6LQ6 or 8950, and
: which proves wrong your statement that they had lower anode voltages.
: How do you manage to keep posting when you contradict yourself so
: often?

You've got your nose so far onto some tube data sheet that your can't see the real world. Maximum Anode Voltage is some mfgrs recomendation, not a rock solid rule. Different mfgrs often varried in their ratings which confused many bafoons like yourself.

To be brief (for your sake), let's just say that mfgrs recomended voltages are often not the rule of the day. If you had more than book reading experience building with any of the above tubes.... you'd know that many tube anode voltage levels can often be pushed well above the mfgrs rating. How about 900 to 1k vdc on a 6146 to get your motor going...?
How about 475vdc in a commercial application, same tube.
So get off your cheesy book education and start with some RELATED facts

or experiences you know as said.

Now, to get back on topic... RF amplifier circuits using sweep tubes are most often quite different than commercial radio amplifier circuits. Sweep tubes can be made to preform very well in a realistic low cost HF RF Amplifier Circuit, hence one of the main reasons they were chosen by many mfgrs through the years.

A sweep tube amplifier circuit can be made to operate linear and quite clean. Many people do not truely understand their operation in HF Amplifier circuits, hence you get people like Sparky blowing a lot of BS and off topic diversions based on what they read from a book.

The choice to use a sweep tube is most often made for cost reasons, nothing wrong with that. Back in days of old, they could be obtained free from old TV sets. Since a gazillion replacements were made for the TV repair business, they became popular as the valve to use in a lower cost amplifiers. The quality and engineering of some amplifiers made for certain markets was often questionable. There are/were many brands of sweep tube amplifiers made for the Amateur Service that work quite nice.

There were also many amplifiers made with larger (non sweep) tubes that could be considered crap. Many of those mfgrs have long been out of business.

Similar debates rage in other news groups I frequent about amplifier construction using tubes other than the generic sweep or beam power types. The game is the same, the ball park and the players change, similar goof ball types like sparky and boobner appear and fade away. Many try to support their arguments with mucho off topic BS and diversions. If you stay on the original subject, the truth should surface once the smoke clears.

This latest generation of K, KL and KLV Italian made tube rf amplifiers are sold at a relative low cost. If they are not a viable product, they will poof off the market as have so many other brands.

As it happens, I wasn't talking through my hat. The Drake "4" line and the Yaesu FT-101 both use sweep tubes as finals. Hmm, imagine that. In over thirty years, no one seems to have complained all too much about their non-linearity. In fact, both are known for good sounding transmitted audio. Someone else pointed out that ALL amps can exhibit non-linearity somewhere in their operating regime, but it can be designed around. Oh, yeah, both transmitters put out about 130 to 150 watts.

> I hesitate to involve myself myself in this but I ask: as easy as it is to
> upgrade to "ham" status these days, why not just do it?

They are two separate hobbies, with different uses.

A CBer is a CBer.... not a "Ham wannabe". Many CBers just want to yak, they do not care about the technical side of radio or electronics... so the Ham bands would NOT suit their needs.

Many CBers are also "hams", but still use CB for it's intended purpose... yakkin'.

Some CBers are ex-hams, who found that the Ham bands were not want they really wanted. Some have said that they found many Hams to be rather less helpful than CBers (I know, Dick.... not all Hams).

Some CBers are electronic engineers, and also use CB for yakkin... as they get all the technical playing they want while at work.

The term "upgrade to ham" could be taken to mean "we Hams are better than you", and is ignoring the basic fact that the two hobbies are different. Why do some people still believe that a CBer is a "Ham wannabe", and not just a CBer.
So, some CBers have moved to Ham, but many of those stick with CB also, or return to CB. If CB was just a step on the way to Amateur, then there would not be so many using both services, or returning to CB.

But if you mean to get away from the "idiots" and "Trolls", then you should consider that many of the "Trolls" on this ng are *NOT* CBers, and some are "Hams". Ham radio is not supposed to be an "idiot-free CB" service.... it isn't even "idiot-free".

Regards,

Brainbuster.

Hi Sharkmeister.

I notice that Aaron still has a problem understanding "blocked sender". I only see his replies when someone includes it in their reply.

If he looks more carefully, he may notice that I do **NOT** claim breaking laws to be OK. At *NO* point do I say that I only obey certain laws. He would notice from my other posts that I use a *legal* UK CB, with *no* extra frequencies, and *no* RF amp (rx or tx). Even my antenna is within the latest spec.
But then again, he only sees what suits him. There's none so blind....

All I said was that I find it impossible to get fired up over undectected crimes which have no official figures to show that they harm anyone, when there are children out there suffering pain and a slow painful death that we could only imagine the horror of.

If I get inteference from an illegal transmitter, I am very capable of dealing with it myself, deciding what needs to be done, and reporting it to the "RIS" if I feel it really necessary.
I do NOT need someone like Aaron to keep "lookout", or to bother *possible* offenders for me. I feel quite sure that most adults would also feel that they do not need "looking after" by someone like "Aaron".

Oh, and I mentioned shooting serious child abusers in the head.... that soon got Aaron "fired up".... but **NOT** to agree!!!!
No doubt Aaron has his reasons for getting stressed out by such an idea, but I really wouldn't like to make any guesses about what these reasons are.

Brainbuster.

As the US, and UK have some different slang, and spellings, I got a program
to convert US slang in news messages to read in UK slang.

I think it may have a small bug......

He is so full of it his eyes are Brown.TW, How can i harrass him when i don't repsond to him unless he responds to or about me? Do yourself a favor and call @home abuse team you can too prove that he is lying. You already saw where he doctored the AUP right off of there web page.
He will stoop to anything. for the record his downfall has already been laid out by him, he would include every screen name I ever used in his posts and reply exclusivly to me. Now he wants to filter me? a few weeks back he couldnt get enough of me, he harrassed me, by pulling up old post from google and reposting them into the NG in an attempt to harrass me more all the while trying to claim I made them. So all the posts from him relating to me were saved in a dossier for future use when he tries to pull a stunt like this @home see's what they are dealing with and have brushed it aside as BS. LOL the past month he says he has tried to filter me well he don't know how to use filters properly evidently and really wants to read my posts. This is an unmoderated NG it has No filters If you don't like something don't read it, See it is no different than me coming over to your house and posting from your computer If he don't like what I have to say don't read it or better yet don't reply to it, @home says this is ok you can have multiple names, and accounts.

> unit without a car hehehe.

I use a Kenwood THG-71A with the Maha NiMH 1600 Mah battery pack. Does 6w on 2m and 5w on 70cm. You can also buy a light weight VOX headset that plugs right in to the HT, and is powered off the HT battery pack.

http://www.kenwood.net/products/index.cfm?AMA=open&ama_hheld=open&radio=TH-G71A&selection=Amateur&ID=50

Another good HT would be the Yaesu FT-50R.

http://www.yaesu.com/amateur/ft50r.html

I would stay away from the super small rigs like the Yaesu VX-5R, not because they're bad rigs, but because they are TOO small. What many people forget is the case of the rig is used for the heat sink for the final PA section. A smaller rig gets way too hot way too fast at high power. You want something small to fit on your belt, or in your pocket, but still allows a useful TX duty cycle without burning your hand trying to hold the thing. The super compact rigs are mainly aimed at monitoring with a very low duty cycle TX. I assume you want one for emergency use so you will be doing a fair amount of transmitting I think, so consider a rig that can handle it.

It was Jerry. I was referring to dear old Twisted as a domesticated farm bred chicken. He's had his wings clipped more than once in this group. 8-))

The story about the headless chicken by the way is true. I heard this story about a year ago when a local rock radio station mention it as a teaser for their news broadcast that day. I included the links just so people can read about it for kicks.

All these morons reporting you to ISP's will get nowhere.
ALL of the Following posts, using their logic, are also "Illegal",
but never the intention of ANY ISP's to censor:
1) Guys in the "car" newsgroups telling their buddies how to bypass a
pollution control in their vehicle (violates a Federal Regulation) or
selling "kits" that make a Street car no longer "street" legal..
2) Posts telling where on the highway your buddy can "test" his new
car up to 90Mph & avoid the Police Speed Traps (aiding & abetting
violation of a State Law)
3) Almost EVERY Post in Alt.DSS.Hack. - In fact, a case could be
made that ISP's such as AOL or Opto online or Google are themselves
Aiding & abetting violation of federal regulations by merely making
this newsgroup available to their subscribers!!
4) Hobbysts posting "for sale" posts to each other selling items
that, when hooked up & used, no longer meet current regulations or
guidelines. This could include people playing with CB & Ham radios,
older 5 gallon "flush" Toilets & other plumbing supplies, model rocket
enthusiasts & countless other "lawbreakers....!!

BrainBuster, what type of internet connection do you have ? You run the same risk every time you open a post you may not like what is said or you may, If you don't like what I have to say then by all means block me out, the only problem the computer is at our Frat house and there are many student users who use the account so we are always changing and adding /deleting accounts etc. Gets kinda hectic tho, but we all use the same PW to make it work. If you didn't notice there was usually additional text in the rest of thoses posts, that was my signature file. I kinda like it on top so if you had perhaps read further down there was additional comments that you may have enjoyed reading?

Hello Frank: I have replied below.

Sparky wrote:
> You can also tune it using a field strength meter, or by having
> a friend on another radio a mile or two distant tell you when your
> signal is best. That's what you are shooting for, and it's more
> important than SWR.

Telling someone to use a field strength meter, without "hows it done" is incomplete. I use at times a field strength meter with a 50 Ohm input impedance and a 50 ohm step attenuator, but I also have the antenna 500 feet away, and at times have taken bad data, but was able to catch it, as comparisons measurement to a reference antenna are available to me. I have never seen anyone use a field strength meter with any real knowledge of what their are doing, or that there are 57 Gillzilon ways to do it wrong.

But I must agree with the friend a mile or two away, looking at the S-Meter. I have used other stations while on 2 meters simplex yelling back and forth. But you run into the problem of the receiver being able to see a fine difference between a 1 or 2 dB's difference in signal levels, and having the capability to see this small difference in signal levels is essential at times when small changes are made to the hardware configuration of a antenna, or its installation. Like when two of same type antennas are measured, you need to be able to see 1dB changes as well as .5 and .1 dB changes. This leads to using a moderen Spectrum Analyser, big $$$.

> BTW, a linear amplifier is illegal to use with a CB radio, and can
> carry a fine of up to $17,000. (Hey Jay, why did you bring that up
> when he didn't even say he was using a linear?)

17K fine, very unlikely. I would warn him of staying out of the way of lightening strikes and falling meteors.

But you notice he did say he was going too use one. I have a pretty good cross section on the numbers, if you remember. It seems to be pretty accurate.

Answered above.

> BTW, did you ever find out if your radio was a Viking or Valiant?

I walked into the radio room and looked into the radio room collection stuff, and verified it is indeed a Johnson Viking Ranger. It has no indication as being a #1, as does the Viking Ranger II does. It has the pair of 6L6's plate modulating a 6146. The Johnson Viking Ranger II, has 6146's plate modulating 3 each 6146's, and man does that make a big amp get up and bark at the Moon.

Hi Michael...

: In rec.radio.cb Michael A. Terrell <michaelaterrell@netscape.net> wrote:
: Some TV's used 807's for the Horizontal output, and the tubes are NOT
: built for a 15 KHz bandwidth. A Horizontal output is a PULSE
: AMPLIFIER.

I'm about laughing out loud to think of a poor old 807 screaming it's fool anode cap off doing horizontal output duty. That must be one really old TV. An 807 tube is a very popular audio amplifier tube and it was the subject of some HF RF Amplifiers. I have a few articles in my files of said. Some even converted the similar 1625 to audio service.... boy we're going way back now.

: Several of the early B&W Sweep tubes were IMPROVED 807's,
: with modern bases so they could be made cheaper, and with the same
: equipment other consumer tubes were built.

: Is the 8950 a TV tube?
: Yes.

No it is not... no TV that I've ever seen or heard about had one. As I mentioned, it was designed by GE for beam power applications.

: It's the 6KD6 with a 12 volt filament.

No it is not, the 6KD6 has lower transconductance, lower plate dissipation, different internal capacitance values and probably a different pin out. The closest conventional sweep - beam power tube to the 8950 was/is the 6HF5. One can upgrade a Swan 350 from the 6HF5 to the 8950 with relative ease. I have done a few in my day.

: Several tube manuals
: simply list the filament specs, then tell you to use 6KD6 Specs, because
: they are built with the same internal components. As fare as being
: non-linear, EVERY amp has some non-linear properties. After all, they
: are used in the real world, not just on paper. By the way, some early
: color TV's used 6146's for sweep tubes.

Similar but not exact... the 8950 along with the similar type Maco output tube should be treated as different. Not only was the 6146 used in TV's, one can find it in the very popular early Ampeg SVT Bass Guitar Amplifier. Loud as heck and heavy like a boat anchor... but man it has some tone.

cheers
skipp

Hi group. I am selling a 16-pill amp and 2 driving 4 setup. Both units are in really good condition and have excellent cooling. I have had the units on a 14v system for around 3-4 months. At 14v these pieces will produce 2300-2500 bird rms watts with good "key time". I am told also that with a good charging system at 18v this setup will produce around 3500 watts but I have not experienced this myself.
I am selling this setup, BOTH units, for $1400.00+ship. The units will be very professionaly packaged to protect them from our wonderful shipping services. If you have any questions about this unit i will respond only via e-mail.

That shouldn't be a problem, since you insist on reading my statements
out of context. I really like your use of "not a rock solid rule" to
avoid contradicting yourself. So I'll just quote the only other
relevant portion of your post:

> Like Ms Cleo says... "But you knew dat..!"

Yes I did, but thanks for the verification (she sure does get a lot
of business from the keyclowns, doesn't she?)

Was that equipment intended to be used in the commercial radio
service as I specified, where the tolerances are tighter, and
the operator isn't required to follow the loose restriction of
using "good engineering practices"?

>
> Jay in the Mojave

Well, maybe it's in the wrong case. I just dusted off the old manuals
and got the following: Ranger (1) uses a 6146 with a couple 1614's as
modulators; the Ranger II is the same but uses 7027's as modulators;
but the Valiant uses two 6146's modulating three more in the final.
So do you think yours could just be mislabeled or something?

Oh, and the tuning tip I provided was never intended to be used for
any precision, but having a buddy a couple miles away does work very
well. Also, a FSM is a bit easier to use than a SWR meter -- the best
signal wins. And since the best signal is the goal, well...,

Since I am a Viking I have some expertise in this area.

I would assume Jay has a Ranger I (output about 35 watts) which
includes 11 meters (it was a ham band at the time of manufacture).
The Ranger II however does not cover 11 meters, therefore is shunned
by CBers.

> The Johnson Viking Ranger II, has
> 6146's plate modulating 3 each 6146's, and man does that make a big amp
> get up and bark at the Moon.

No, you're thinking of the Viking Valiant (output about 100W). Driving
the average ham linear amplifier with a Valiant running full tilt
would result in the kind of ungodly splatter outlaw folks like Jay are
famous for.

We have a Continental 317-C2 50,000 watt AM transmitter on 660 KHz
available in Greenville, SC. This transmitter was making full power and
modulating 125+ positive when removed from service on October 15, 2001.
An Instruction Manual and a spare final come with it.

Anyone want it? Bring a truck.

Thanks!

There are a lot of variations but the usual is a Navistar/International
diesel. Pop the fiberglass hood and climb in with some big wrenches.
Everything about school busses is different in CA; for all I know they run
on etherial vibrations from the Santa Monica pier. But the gizmo that keeps
the lights on is more than likely a Leece-Neville.

"Similar but not exact"? What happened to your "not a rock solid rule" excuse? Oh well...

I did a little research, and the 8950 was a 6KD6 beefed up for RF service. It didn't get much call except for inexpensive amateur equipment (just like sweep tubes), then it died.

It doesn't make any sense that a TV set would be designed using a 6146 for the sweep tube when less expensive and more capable tubes exist. I have TV service manuals for sets going back to the early 50's and none of them use a 6146. Maybe you can enlighten us as to the make and model to which you are referring?

Dear Dumbass Dave,
He asked if something would work and I gave him the honest answer. I didn't tell him to go off of CB. I told him that the communication he needed to make would only occur at a lower frequency. There's no need to sugarcoat something and tell him that if he runs 5 kilowatts into a cubical quad bolted to his back bumper that he can talk over the hill. It isn't going to happen, and I'm not going to tell the guy to spend a fortune experimenting with something that was proven not to be doable 80 years ago. Grow up Dave.

Where in my answer did I say anything about amateur radio? Please cite a post on this newsgroup where I have posted an amateur callsign. Dumbass Dave, you need to grow up and get a life.

4650. antennas, help! I'm confused!

Newsgroup: rec.radio.cb
Date: 2001-11-08 12:54:37 UTC
From: "V. Wesseling" <vincent@dsdelft.nl>
Message-ID: <3BEA808D.B3FB7ABB@dsdelft.nl>
Source record: 103663

Hi reader!

I have a 4x4 vehicle, And I wnat to use my 27MC transmitter in it. I see a lot of vehicles like it with the antenna mounted just in front of the spare tire. Now I've got a few questions that are confusing me:

1 - I always tought a metal surface surrounding the antenna was needed to get a 1:1 SWR (or get close, ie out of the red zone). When mounting in front of the spare tire, the only metal getting close to it is the vertical skin of the vehicle! Can somebody explain how to get the SWR right when mounting this way?

2 - Length of cable is important too. I only forgot how long a (coaxial) cable has to be for good results (also SWR matter, right?)

3 - When I turn of my transceiver, in some way my chanel indicator keeps lit up somewhat. In the store they connected it, but it worked fine there. I get the same problem when I connect it to a powersuply at home. I tried to connect another microphone, but as soon as i did that, the entire set was dead (no power). After installing the original mic I could use the set agian, but but the indicator problem...

Tnx in advance, with regards,

Subject: Re: doug, leland, frank and dwight.....man what a
credit to h
From: abuse@cotse.net (Leland C. Scott)
"Jerry Oxendine" <joxendi@bellsouth.net> wrote in message
news:0d0G7.21006$LD.654763@e3500-atl2.usenetserver.com... I know this is
off topic, but perhaps it will provide a little respite from the
arguments! LOL!

It was Jerry. I was referring to dear old Twisted as a domesticated farm
bred chicken.

"But of course you were. Along with your unhealthy and unusually weird
obsession, your intellect and lack of couth predisposes one of your
incompetence level to insult or attack whenever threatened, and for some
reason, I appear to have that affect on your psyche. The mere thought of
you attempting to carry on a rational debate with me that would actually
require a thought process sends you into violent spasms caused by
feelings of inferiority. Perhaps it is because each time you attempt to
engage me in discussion or debate, you self-destruct prior to getting
started. On the extreme rare occasion you have something of importance
or pertinence to offer, it is inherently diminished by your
neanderthal-like and off topic insults."

He's had his wings clipped more than once in this group. 8-))

"Yes, you really must rapidly change the subject matter. Rereading the
comical diatribe you wrote while under the infuence of ignorance
concerning terrorists on the freeband freqs. with handhelds is rather
akin to a Freudian slip, considering the source."

The story about the headless chicken by the way is true. I heard this
story about a year ago when a local rock radio station mention it as a
teaser for their news broadcast that day. I included the links just so
people can read about it for kicks.

"The kicks appear to be self-inflicted. Each time you attempt a clever
response, you telegraph more ignorance. #1 There are no carp in the
swamps of Florida.
#2 The majority of the group (see, I can assume that status, simply
because I feel the majority of the group has a much higher IQ than you)
knows what a chickenhawk is. It is apparent you do not. It was discussed
some time ago before I replaced lmangang as your object of cb radio
worship. I humbly suggest you embark on what you do best, scouring the
archives, to find just what it is you so remarkably identify with."

My, but that anger problem is like a monkey on your back. Look, 'Nad,
you embarassed yourself by carrying on about Bin Laden using cb in the
freeband, I just pointed out it was the ravings of a semi-mildly
challenged adult in need of anger management instruction. Claiming you
monitor terrorists and that you know so much about their communications
is one thing, but to make the statement that cbers should be shot in the
head for something you don't agree with cements not only your position
toward cbers but your state of mind as well. You must admit, my thoughts
on the matter of illegal cb provoke such profound reaction from you, so
much as to the point that your anger prompted a post that may be
construed as a genuine threat of violence by some. Nevertheless, you are
keenly aware of my level of concern toward you. Heretic impotence
instills no fear. In addition, my ability to make you react the way you
do and almost on cue simply by my view of cb is in direct contradiction
of the accolades you have attributed me in the past. Get some rest.

> on etherial vibrations from the Santa Monica pier.

Yes the Liberal Democrats are taking a popularity hit, over the current events. And the lions majority of Californians seem to want a few of the boys heads on sticks, the terrorists and the local office holders. They just voted out all the school board, good deal.

So this is attenuating the "etherial vibrations" quit a bit. The tree huggers, butter fly chasers, general all round goof balls, milt toast, limp wrested, slow leak, weak link, "I'll have the California Plate", communist bastards, and bad guys are taking a hit.

> But the gizmo that keeps the lights on is more than likely a Leece-Neville.

Again I am sure your correct on this matter. But I think I am gonna pass.

No I'll pay the local mechanic his Do Ray Me.

Jay in the Mojave

Agreed, but let me ask this,
You can honestly say, that you didn't get in
the car running late and go "Damn" I'm
late. Start driving down the road in a
hurry to get to that doctors appointment,
pick up the child, date whatever, you didn't
do that intentionally?
Don't get me wrong, there is a difference
and I'm not trying to flame you, but to run
around here crying criminal, well would you
do the same in a car or truck newsgroup if
they were talking about modification to by
pass smog, make the exhaust louder. Would
you go to the DSS hack group and complain, I
mean that cost those companies millions every year
and I don't see these guys there, nor do I see much
people whining about snitching to the FCC.

Take care,
Landshark

Actually very well written Twist. I do think
he is trying to say we must live in a Nazi style
state, where there is no trial by a jury of your
pears and you should be shot for out of banding
and the ever present littering. Boy think of it,
the crime rate would drop, we can all run around
in brown shirted uniforms, carrying guns, shooting
people for j-walking, littering, talking on the cell
phone while driving etc etc. Yup, when that happens
I want to become a mortician, I will be a very rich
person.

My, but that anger problem is like a monkey on your back. Look, 'Nad,
you embarassed yourself by carrying on about Bin Laden using cb in the
freeband, I just pointed out it was the ravings of a semi-mildly
challenged adult in need of anger management instruction. Claiming you
monitor terrorists and that you know so much about their communications
is one thing, but to make the statement that cbers should be shot in the
head for something you don't agree with cements not only your position
toward cbers but your state of mind as well. You must admit, my thoughts
on the matter of illegal cb provoke such profound reaction from you, so
much as to the point that your anger prompted a post that may be
construed as a genuine threat of violence by some. Nevertheless, you are
keenly aware of my level of concern toward you. Heretic impotence
instills no fear. In addition, my ability to make you react the way you
do and almost on cue simply by my view of cb is in direct contradiction
of the accolades you have attributed me in the past. Get some rest.

Sorry Scott they will never agree. Because if
they did, then his and Aaron's, Leland's and Sparky's
accusations of people would be null and void(which it
is). Sparky should know, he went to criminal court
for a littering ticket. Yes your right, if you read the
fine print it say's "In lieu of bail, your signature is a
promissory to appear in court , before a judge in
this criminal matter"
But alas, they will keep trolling, I recommend you
kill file who you don't want to see it's been quite
better since I did.

Dave, the reply simply stated facts. Fact is, many amateur frequencies would also not work (such as 10, 12, 15, 17, etc). What is needed in such a situation is either a high repeater with a line of site down into the valley, or a relatively low frequency which will reflect from high angles (say 75 or 160 meters), or one which supports true ground wave (75 or 160). This has nothing to do with getting off CB. One possibility does remain - high power and utilize scatter. A few hundred watts will probably support communications out over 100 miles despite not being line of site. This is legally left to amateur frequencies. Ooops - an oversite, there is a possibility of knife-edge refraction.

Of course, running all the way from 1.8 MHz to at least 1.2 GHz.
Efficiencies start getting poor below 14 MHz, but that doesn't stop 'em.

Hey Mopar!

Yeah, I might not know all I want to about radio, but I DID get more than I wanted to know about
chickens, being a 'relunctant' farm boy in the 50s and 60s. You see, my Dad was a country preacher, and contrary to the TV images, he never made very much money. Farming was a necessity for us, so we raised chickens, farmed vegetables, had an egg route in town, and did most of the farm stuff everybody else did in the community. We got 250 baby chicks from 4-H which we raised, and then returned 100 chickens to them. That left 150 for us to keep for eggs and
an occasional fried chicken for Sunday dinner--usually the hens that didn't lay very well. Most of
the hens were VERY good layers, and we never wanted for HUGE brown eggs for breakfast,
and we had enough to service several restaurants in town.

I didn't really mean any harm to Leland, but I had to correct his impressions of chickens not having the ability to fly. Sometimes chickens would "escape" from a farm and go wild. They could, and did, survive, and once wild, developed the ability to fly over long distances. The reason domesticated chickens don't fly much--except when startled or chased--is they have no need to.
They have food and water brought to them, often become quite tame, and so....not much flying.
I had most of the hens so tame that they would squat and spread their wings, clucking in a certain
way that meant they wanted you to pick them up and pet them. That was due to their being handled as chicks. The roosters were a different matter.
They become territorial and must be watched when they become adults when you go into the chicken lot. If you are not careful, a
rooster will fly on you, flogging you with his wings, and scratching with his claws which are very
sharp--even dangerous. I learned that the hard way when I was 12. One day I went in to feed
the chickens and started back out to the gate. I hadn't paid much attention to the roosters, and I
had a prize Rhode Island Red that had won blue ribbons at the county fair. He'd never gotten
after anybody before, so I wasn't paying attention on this particular day.
As I approached the gate, I heard a "fooomp, fooomp" sound of feet on the hard ground. I turned to see what it was, and that rooster flew up right in my face! I had feed and water pails in my hands, and I instinctively swung one of the galvanized buckets at the rooster knocking him to the ground. I quickly exited the lot

somewhat shaken, but the more I thought about it, the madder I got. I got me a big stick and went back in the lot determined to "whup" the sh** outta that chicken. Mama heard the commotion and came out scolding me for "playing" and scaring the hens. I tried to tell her that "Radio Flyer", (the rooster's name I gave him) had flogged me and I meant to "whup" him. She thought I was just playing. Anyway, I got that rooster afraid of me by going in there with a stick and chasing him til his tongue was hanging out (when my folks weren't around). One day Mama went in the lot, and the rooster flogged her! Then she believed me.

Sorry for the OT story, but such was the life of farm kids. Hehe! I've been chased by chickens, cows (bulls), and put up a tree by a boar hog. Funny now, but not when it was happening! LOL!

Jay,

Well, you can always move east to NC! LOL! While we aren't completely overrun with Liberals, you could consider NC to be somewhat Moderate--about balanced between Demogogues and Reps. I haven't been Cali since I was a child, but we often hear "tales" about wierdos that seem to be attracted to Cali more than anywhere--not to say we don't have our share of the same wierdos- tree huggers, bleedin' heart anti-this, anti-that--particularly capital punishment. They always gather outside Central Prison in Raleigh holding up signs when they are about to execute some poor, per- secuted criminal. Those same people never mention the poor VICTIM of that bastard's crime, only how the poor criminal was abused as a child, and he isn't "responsible" for his actions because of his "environment" BULLSH**!!!!! I say FRY 'EM!!

73

I cut the post below from the AM BBS.

I'm a big fan of AM transmitter and antenna systems but thought my
friend Toll Free would enjoy the humour.

They don't quite give these old beasts away here in the UK though I know
of three 50Kw Marconi's at around 15K USD for all three U-Haul!

If there was one part of California politics that irritated this outsider it was the total inability to grasp that actions have consequences.

Back when car insurance premiums were on the ballot, my aunt Floss (Florence) who was no dumb-dumb having gotten to CA on the Super Chief with a few suitcases full of Al Capone's money and lived to buy a few blocks of Long Beach, was absolutely amazed when her car insuror withdrew from the state. I met a cousin, her daughter, two years older than me who is the world's oldest Valley Girl; they run a chain of yogurt stands. Gag me with a Forklift.

CA, WI, and NE all carry the heritage of the Progressives. I know in WI every comes to attention and salutes LaFollette having dismantled the whole structure, I gather the memory of Hiram Johnson has not survived too well in CA, while we in NE continue to enjoy the one-house legislature and public power left by George Norris who was also the father of the TVA and the 20th Amendment that cut FDRs first term six weeks short. Not even the students at Norris Jr. Hi have a clue who he was.

4682. Re: antennas, help! I'm confused!

Newsgroup: rec.radio.cb
Date: 2001-11-08 18:57:10 UTC
From: Skipp <skipp@pilotNOSPAMPLEASE.ucdavis.edu>
Message-ID: <9seki6stl2@woodrow.ucdavis.edu>
Source record: 103695

: 1 - I always tHought a metal surface surrounding the antenna was needed
: to get a 1:1 SWR (or get close, ie out of the red zone).

No, some antennas require metal most often underneath to "work against or reflect off-of" and it's often called the ground plane or the ground side of the antenna.

The vertical section of most typical cb antennas should be in the clear as much as possible. Adjacent metal too close will most often cause problems. You will have a tough time trying to get minimal swr with nearby metal causing a reactance.

: When mounting
: in front of the spare tire, the only metal getting close to it is the
: vertical skin of the vehicle! Can somebody explain how to get the SWR
: right when mounting this way?

Try to keep the antenna as free and clear as possible (ie away from the skin or related metal. Try to ensure there is a proper and large enough ground underneath it for most antennas to use as a ground plane.

: 2 - Length of cable is important too. I only forgot how long a (coaxial)
: cable has to be for good results (also SWR matter, right?)

Not for the most part. You should be able to run any reasonable length of cable from your radio to the antenna without major loss. The antenna and it's placement on the vehicle is the big factor in the system preformance.

: 3 - When I turn of my transceiver, in some way my chanel indicator keeps
: lit up somewhat. In the store they connected it, but it worked fine
: there. I get the same problem when I connect it to a powersuply at home.
: I tried to connect another microphone, but as soon as i did that, the
: entire set was dead (no power). After installing the original mic I
: could use the set agian, but but the indicator problem...
: Tnx in advance, with regards,
: ing. V.R.A. Wesseling
: vincent@dsdelft.nl

They are probably not connecting the chassis (metal box) of the radio to the ground side of your radio when they test it in the store. Check to make sure your radio will do both negative and positive ground autos... If so, there might be a ground bad isolation diode.

The mic connector probably has some voltage on one of the pins... when you connect a different mic, that pin is shorting to ground. Use the stock mic and you'll be fine.

cheers
skipp

The 6146 was a very popular final output tube used for
low band VHF service (30 - 50 MHz) commercial radio units (Prog Line?)
from General Electric (GE). The RF section was one of the most
solid designs from the period. Of course, they were selling it to
the local and state law enforcement agencies. The only problem was heat.
Today, small reliable fans, Teflon wiring and modern capacitors
can be easily address and handle this issue.

Now you have me thinking about a winter project.

>right when mounting this way?
snip

Mounting an antenna this way shunts some of the power directly
to the vehicle instead of radiating it. If you must mount the antenna
this way then the main factor in getting a good SWR is to shorten the
antenna. A antenna mounted in close proximity to a vertical metal
surface will become capacitive. In order to counteract this and
achieve resonance once again you must decrease its inductance by
shortening the antenna.

Follow up:

Take Garys advice and try frequencies lower. Maybe 2,3 or 4
mhz? Radios can be bought used off of the newsgroup rec.radio.swap
They work fine right out of the box. No authorization code required.

phil, while i realize you were joking ....but i wouldn't put it
past toll free to fire that baby up on 11 meters......of course he
would have to replace his coax with hardline(if he hasn't already) and
the gamma match rods on his beam......and let us not forget,......it
would have to be strictly spurious emissions free bleedover of course
and naturally spectroscopically clean. and his neighbors would love
him even more than they do now perhaps......almost as much as

voobie.....diez quatro???

No matter how you spin it Sharkey, defying FCC rules is breaking
federal law. It is also thumbing your nose at your CB neighbors.
Neither one is nice. Both are selfish and antisocial. When you start
splitting hairs about the definition of the word "crime" it's a sure
sign of a guilty conscience seeking an excuse.

4710. Lincoln needs TLC

Newsgroup: rec.radio.cb
Date: 2001-11-09 02:11:43 UTC
From: badger589@aol.comnospam
Message-ID: <20011108211143.23901.00002086@mb-ci.aol.com>
Source record: 103724

I have a President Lincoln that is having a slight crisis. First of all I think the previous owner took out the backlight bulb with the intent to replace it, but never did. I am also having problems with the display not reading properly. It displays the correct frequency when the voltage is almost too low to keep the radio on. If I actually turn the voltage up past 11.2 volts, extra "bars" light up, thus distorting any readable display. Any recomendations would be appreciated. I would even be willing to take it to a tech in the central VA area. Thanks.
Regards,
Badger

Why not put it on CB ? It may be THE THING to bring to the BROS
"shootouts." It would win fow shore! I'd love to key it on 19 asking fow a
radyo check!!!
Actually it may be better used as an AMERICAN "pirate" broadcast band
transmitter instead. I'm sure that goes against your 6th plank noodle, N8 !
CQ broadcast band, CQ N8!

I'm sorry Train I rarely disagree with you,
but I must on this one. Most hams are not as anal
as say, Leland, Sparky, Aaron (Dwight or whoever),
Anonymous Pa. man. There are lots on here that are
hams, don't use linears but at the same time, don't
come out here and harass the people that do.
Some of the hams that here but don't complain:
Toll, Jay, Jerry, Richard, Brainbuster, SSB, Mopar
(ex-ham) I (ex-ham) numerous others.
Some may not condone linears, but at the same
time they don't come out here and preach Part 95.

No, matter how you spin it Aaron (whoever you are)
your wrong. You are not breaking federal laws part 47,
until the FCC has sent a NAL, warned you a number
of times, forwarded a notice to the Federal District
attorney under rules part 97.
As far the anti-social crap, you are the one being
anti-social. You hide under an assumed name, post
things that purposely inflame people, and cause nothing
but hate. So you are the selfish anti-social person, that's
trying to hide behind an assumed name.
Spin-a-yarn,

It would be better to drop Bibles on them wrapped in bubble wrap in their Afganastanese language which would do more damage against the "Mohammadens" then sending them to the Lake of Fire with a bunch of junk being thrown on them from CIA drug planes!!!!!
Dave!!!!!!!!!!!!

The 5 1/2 Francis would be better, but IF you want bandwidth, I have a 6 1/4' Ham type CB antenna that has more bandwidth on CB than N8 would ever approve of !
Dave!!!!!!!!!!!!!!!!!!!!

Sorry Dumbass Dave, I was presuming that the tall hill in question was made out of stuff like rocks, sand, and various compositions of soil. If the hill consisted of a 4 thousand foot high pile of chicken feathers, then the cb signal should work just fine. Short of that though, cb isn't going to work, and I'm not going to tell the original poster that he should go out and spend a pot of money improving his cb setup with the sole goal of getting over this hill. There are other ways to do it. You are so paranoid about amateurs that I'm beginning to wonder if you just didn't want to be one at one time in the distant past but couldn't pass the test. You sure have a problem with that. In any event, you have frequently indicated your support for freebanding, so what's to stop you from doing the same thing on, oh say, 3 MHz? That signal would get over the hill, and would not require an amateur license.

Dave or Debby wrote:

Bryan it sounds like you have a bad regulator in that unit. It can be repaired, and if you'd like I can probably do it for you. You can find out more about me at http://hr2510.homeip.net:2510
my number is listed on the site and if you have questions first please call, I'll be glad to talk to you.
Tom-Doc

Authorization is required. Its called an amateur radio license. If he
gets caught without it he can face heavy fines and possible jail time.
I also agree with Gary's advice of using low frequencies but do it
LEGALLY. The ham license is not very hard to obtain.

4730. Re: Are cb's strictly line of site ?

Newsgroup: rec.radio.cb

Source record: 103743

I thought I explained that. Regardless of ham frequency or not, radio frequencies react differently based upon frequencies. Down in VLF (say at 30 KHz), the ionosphere and the earth act as a big waveguide. There is knife-edge refraction, which can affect VHF/UHF/ and to perhaps a lesser degree 11 meters. This is where a sharp change in the surface (such as a mountain or valley) can cause RF waves to 'bend' a bit around a sharp edge. If the frequency is low enough, the curvature of the earth can and does act as that 'knife edge' These frequencies will be below 5 MHz. This includes the broadcast band. The broadcast band is NOT a ham band (although there have been some 'happy broadcasters' who have been nailed down there too). Get off your 'we' vs 'they' thing and read the posts. This is about PROPOGATION, not PROPOGANDA!

73 from Rochester and try reading the posts again

> Sr Baja

Yes, there are mobile ham radios but you need a FCC license to use them. The license is not very hard to get. In your case the mobile ham radio would be a viable alternative. If you equip yourself with a 100 watt mobile radio and decent mobile antenna you should be able to use 2, 4, 7 MHz depending on time of day. During daylight hours 7 MHz would probably be your best band and 4 MHz in the evening. Another advantage if you get in a emergency situation the low bands will carry a great distance. So someone should be able hear you and give you help.

Do you have a metal roof? Put the antenna in the center of the top.

Ok- if mobile ham works so good why doesn't everyone have one instead
of cb ? Also why do some people here hate ham so much ? Thanks for the
great advice.

No its a Johnson Viking Ranger, all right. Its in mint shape to boot.

No my Johnson Viking Ranger II (I got two of them) has 2 ea 6146's plate modulating, 3 ea 6146's in class C Plate Modulated RF Finial. The Ranger II has the bitchen VFO Dial on the front.

Look at Toll Free's Johnson Page at:
http://www.bigradios.com/tollfree/johnson.htm

If this doesn't throw a little wood in your shorts, then you probably don't like girls, rock & roll, guns, fast cars, 4x4 trucks, big radios and antennas, seein who can spit the farthest, a few beers, dirt bikes, campin, and partyin, and voted for Clinton.

The antenna only has a few inches of adjustment, this will not allow the FSM to make a good discerning measurement. Perhaps on the location of the antenna on the vehicle. I have them move the antenna around, and drive out a few miles, find a spot to have the car drive in circles, and watch the S-meter. Usually the top middle of the vehicle works the best.

Jay in the Mojave

So, you claim that a law is only broken if you're caught? That's plain and simply crazy. The minute you ignore the law, you are comitting a crime. Whether or not you get caught, will determine whether or not you'll actually get punished for it. But the "crime" is committed the second you do something against the established rule.

> As far the anti-social crap, you are the one being
> anti-social. You hide under an assumed name,

There is no hard evidence that Aaron is an "assumed" name. Because you may "think" it, does not necessarily make it so.

> post things that purposely inflame people, and cause nothing
> but hate.

If someone telling you, you're a crook, is inflammatory, then I hope he does it some more. If the truth bothers you, you should do something to change it.

I can't believe the lengths that some people go to try to spin their way out of the truth. Trying to justify it by making claims that "other people do it", or that "it doesn't hurt anyone", or that "If you speed, you are just as bad, so you have no room to tell me I'm breaking the law", or "the law is wrong, and should be changed, so I feel justified in breaking it".

This country works as well as is has due to our system of laws. If a proposal is deemed to be beneficial by the majority of the populous, it is voted into law. You have an obligation to follow that law, or suffer the consequences. You can lobby to change the law, but if you cannot convince the powers that be, that a change is justifiable, then you're STILL obligated to follow it.

Arbitrarily ignoring selected laws leads to anarchy. Something that is disruptive to society. While infractions of small laws may appear to have little or no impact, it leads to further rationalization for breaking more and more laws.

Be glad you don't live in a totalitarian state where you have no rights, and the local cops can shoot you on sight for law infractions. Living in a country that embraces freedom, also comes with the equivilent responsibility to follow the will of the people or face the penalties. People that ignore this basic principle, are contributors to the demise of our society.

So don't complain when people shoot up schools, steal cars, rape and kill people, steal you identity etc. While these are certainly more serious crimes than operating a Citizens Band radio illegally, the principle is the same.

Ummm....lemme see... They're illegal, they are spectrally dirty, and
the IQ of the operator seems to be inverserly proportional to the
output power of the amplifier. BTW, Europe, South America, West
Coast, Alaska - from the East Coast, all barefoot on a TS-520.
Believe me, a REAL ham doesn't NEED an amplifier.... Ever hear of
QRP? Oh. No, I'm sure you haven't...

When the conditions are right, you can work the entire world with 100 watts. If the conditions are not right, 50,000 watts won't work the next state. So what's the point? Unless you enjoy exposing your body to potentially health threatening high levels of RF radiation.

the Federal District attorney under rules part 97.
--
So, you claim that a law is only broken if you're caught? That's plain
and simply crazy. The minute you ignore the law, you are comitting a
crime.

"Wrong, "Herr multi-nic".
A newspaper can rightfully be sued if they were to write that a perp
"committed" any crime before a conviction in a court of law."

Whether or not you get caught, will determine whether or not you'll
actually get punished for it.
"Wrong again. Whether you are found guilty dtermines legally whether you
committed the act or not."

But the "crime" is committed the second you do something against the
established rule.

"Argumentative, at best. Infraction of rules is not necessarily a
crime."

  As far the anti-social crap, you are the one being
anti-social. You hide under an assumed name

There is no hard evidence that Aaron is an "assumed" name. Because you
may "think" it, does not necessarily make it so.

"Most are not as gullible and impressionable as you."

post things that purposely inflame people, and cause nothing but hate.
If someone telling you, you're a crook, is inflammatory, then I hope he
does it some more. If the truth bothers you, you should do something to
change it.

"Well, you certtainly have your ways. You go lay down, lick your wounds,
and return under yet another phony alias."

I can't believe the lengths that some people go to try to spin their way
out of the truth.

"I know just what you mean. Lelnad attacks me and tells me how the feds
bust cbers left and right and when I ask him to support his claim with a
media confirmation anywhere, he tries to spin his way from it by calling

names and changing the subject and telling me to go get proof in the hammie room. The audacity, huh?"

Trying to justify it by making claims that "other people do it", or that "it doesn't hurt anyone", or that "If you speed, you are just as bad, so you have no room to tell me I'm breaking the law", or "the law is wrong, and should be changed, so I feel justified in breaking it".
This country works as well as is has due to our system of laws. If a proposal is deemed to be beneficial by the majority of the populous, it is voted into law. You have an obligation to follow that law, or suffer the consequences.

"Exactly, and you have no control over those consequences and it pisses you off to no end."

You can lobby to change the law, but if you cannot convince the powers that be, that a change is justifiable, then you're STILL obligated to follow it.

"No, we can choose to suffer the consequences after carefully weighing the odds, remember?"

Arbitrarily ignoring selected laws leads to anarchy.
Something that is disruptive to society. While infractions of small laws may appear to have little or no impact, it leads to further rationalization for breaking more and more laws.

"And softer drugs lead to harder ones, right?"

Be glad you don't live in a totalitarian state where you have no rights,

"Most of us are glad. It's your type who have a problem fitting in and being accepted. You want the world to do your work for you while you peer from behind lace curtains in your dainty, little yellow cottage surrounded by armed guards and barbed wire fence."

and the local cops can shoot you on sight for law infractions.

"My, my, but this familiar theme is ever so popuar among the confused and double digit IQ brigade."

Living in a country that embraces freedom, also comes with the equivilent responsibility to follow the will of the people or face the penalties.

You are getting to be redundant
and are repeating yourself.
Please do not allow your inability to control your emotions to cloud your somewhat already marred judgements and beliefs."

People that ignore this basic principle, are contributors to the demise of our society.
So don't complain when people shoot up schools, steal cars, rape and kill people, steal you identity etc.

"You are a real gem and boon to mankind with that also familiar theme of comparing
one who doesn't recycle their aluminum cans properly to violent criminals, but you already know how valued your esteem is around here."

While these are certainly more serious crimes than operating a Citizens Band radio illegally,

"Ya' think?"

the principle is the same.

"Yas, it is. You ruined every nic you use, lie your heathen brethren few."

No Dave, that's not what I said. You have not broken
any law until they charge you with violation part 47.
Then, and only then do you go before a federal magistrate.
Anything before that is going before an FCC commission,
which can ask you to cease and desist, bring you equipment
in for inspection, issue a NAL.

All right, do you post in any other groups? As said before
say you post in a auto group. Now they discuss all the time

about how to get more horse power, brighter lights,
where to race, how fast they can go, if you started going
on a rampage concerning these issues, do you think they
would get upset? Of course they would, the same goes here.
If they operate out of bands use a linear, you take a chance,
but to run around and call people criminals, it's strictly
for a troll value they wouldn't do that in those groups.
Hell even on the amateur groups if someone post that
type of info all they do is tell them it's illegal, they don't
go on a tirade and start calling them criminals.

> I can't believe the lengths that some people go to try to spin >their way

Ok, I won't if you don't. Seriously, those are good values
but the wrong forum for it. If you have serious concerns for
the cb band I recommend that you take notes, names,
addresses, times, places, report it all to the proper authorities.
They themselves recommend that you are not to confront these

individuals, let the proper officials handle it.
There has been crime for hundreds of years in the USA,
murders, rapes, drunk drivers, theft, burglary, robbery etc etc
To say that disobeying selective laws will cause anarchy,
man this country should be a Taliban nation by now then.
People have and will break laws, and as such if caught
they will pay what ever the price is.

This is all my opinion, as is yours is above, so please
let not start a flame fest.

Take care,

Landshark

What does that article have to do with providing a credible media link concerning cbers getting dragged off to jail? That is what I called on Lelnad to produce.
I guess what you are attempting to accomplish here is the insinuation that somehow this article (which was denied by the FBI) supports 'Nad's ridiculous claims that the terrorists are using freeband near 555. No cigar. Not one person ever made the claim the terrorists couldn't be using American radio. What we laughed at was Nad's contention that they use cb freqs. Read it again s-l-o-w-l-y, and we'll lick that comprehension-of-what-you-read deficit, yet. Still depressed?"

>
> Ok- if mobile ham works so good why doesn't everyone have one instead
> of cb ?

Most serious Radio Hobbyists have a Ham License but it does require
passing
an examination before 3 volunteer examinars in the States. Study
material
can be bought at any Radio Shack or at arrl.org online. See also
qrz.com.

Also why do some people here hate ham so much ?

Because some people just like to act ignorant and percieve an elite
status to ham radio. The truth is, each radio service has its pluses
and drawbacks.

BTW, I would not just start operating whereever I wanted (frequency
wise)
down in Baja because maybe Pepe Lopez may do it but Gary Gringo gets

caught
at it, there will be hell to pay (as well as LA MORDIDA) (THE BITE)
which
can run up to a pretty peso. A ham license is reciporical in Mexico
but costs $70 US to obtain. A ham buddy of mine decided to walk on the
wildside and skip the Mexican license folks and it cost him $$$.
A real pain to obtain MX recip license so unless I am going to be in
Mexico
for more than a few days, I just leave the ham stuff at home.

Martin N5PZJ

Jay, put down that bottle. Those two Vikings you put on the air
illegally are Valiants, not Ranger II's.

--
Ranger II The Ranger II used a pair of 6L6 tubes in the modulators
driving a 6146 power tube to produce about 50 watts of high level AM.

(source: http://www.aade.com/hampedia/johnson/johnson1.htm)
--

The Viking Valiant. A shot of the final section, three 6146's. The
modulation section, using a pair of 6146's.

Multi-nic? Ah, now you think *I*'m yet another reincarnation of Aaron.
That's silly.

> A newspaper can rightfully be sued if they were to write that a perp
> "committed" any crime before a conviction in a court of law."

True, but *YOU* know the minute you key up that radio with more than the
legal power, that you're breaking the law. YOU know you've comitted a
crime. Sitting back and thinking "wow" I got away with it one more time,
I'm the man!" does not diminish the criminal nature of your actions, no
matter what the circumstances, or how you want to spin it.

>

Unlike many of you, I give people the benefit of the doubt. I have seen no hard evidence that suggests that Aaron is anyone other than he says he is. You may want, for your own reasons, to think otherwise, but it'll never be more than a supposition.

No, I guess many are like you and assume that everyone that dares stand up for what's right is automatically Aaron under another name.

>

The FCC does routinely bust radio operators. Look on the FCC.gov site, and there is a section that published their activities. They are certainly not busting enough people, but at least some are being made examples of.

>

No it doesn't "piss me off". Saddens is more accurate. To see a generation of people growing up without a solid moral background, who think nothing of ignoring regulations, and see nothing the least bit wrong with it.

>
> You can lobby to change the law, but if you cannot convince the powers
> that be, that a change is justifiable, then you're STILL obligated to

It's time for "the consequences" to rachet up a few notches. Maybe
that'll wake some people up.

>

>
> "And softer drugs lead to harder ones, right?"

That's been proven both in theory and in practice. It applies just as
well when you apply it to ignoring rules. The more you get away with the
more chances you'll take. That's human nature when you have no
conscience.

>
> Be glad you don't live in a totalitarian state where you have no rights,

That makes no sense. If by "fitting in" you mean that I abandon my
morals and principles and become like those who promote existentialism,
hedonism and declining moral values, then i prefer to not "fit in". But
what does that have to do with work? I do my own work.

> "You are a real gem and boon to mankind with that also familiar theme of

Okay, how's this for an example. You set up a 5 million watt
transmitter in your car to broadcast profanity on 27.999 Mhz. You
invite 30 FCC agents and officals to sit in a specially-built
grandstand in a public park and watch you do it. You even set up huge
projection screens to display live video closeups of field strength
meters and frequency meters. At the end of the demonstration, you
take off, leaving no trail. According to you, no laws have been
broken?

> > > As far the anti-social crap, you are the one being

Who decides which laws will not be obeyed? You?

> People have and will break laws, and as such if caught
> they will pay what ever the price is.

So it all depends on "if you stand a chance of getting caught"?
Criminal thinking.

>
> This is all my opinion, as is yours is above, so please
> let not start a flame fest.

In other words, it's OK for you to promote lawbreaking, but it's a
"flame fest" if anyone challenges your beliefs.

Try this, Jay: ftp://bama.sbc.edu

The site has scans of original manuals for a lot of the Johnson lines,
including the Ranger and Valiant. Are they wrong?

> The antenna only has a few inches of adjustment, this will not allow the
> FSM to make a good discerning measurement....

For all practical purposes, it works just fine. Tuning it any better
might increase your range from 3 miles to 3 miles and eleven feet --
no noticable difference. Try it sometime.

Compared to 160 amps, at 12 volts, that seems much more reasonable?
At 12 volts 160 amps is; Gee around 2000 watts. Nuff for welding
something!
Amazing how often, not knowing the whole application behind a question,
leads us off at a tangent!
Terry.

Mopar and Landshark,

Yep, living in the country has its points. It was not all that uncommon to have a farm animal get after you. A feller got to know which ones to keep an eye on pretty quick. I got run out of lots by roosters, cows--mostly bulls--, hogs and chased by geese. Now there's a sight--a big old white gander running at you, wings spread wide, honking like a Mack truck. A neighbor of ours had a huge gander that would take after me and run me almost home. That thing HURT by beating me with his wings and pinching my ankles. I wasn't but 7 years old, so that thing whupped me pretty good several times. I got tired of it, so I tied and taped a long cord to a rock, and put it in my book bag. Coming home from school, sure enough, that old gander was out in the yard. Just a regular as clockwork, he got after me--except I didn't run. I got out that rock sling, and began to swing it over my head. When the goose got close enough I aimed it and popped said gander upside the head! He ran a couple steps and fell dead! Well, I thought I was justified under the precepts of self-defense, but the neighbor lady didn't see it that way. When she ran out and saw her goose dead, SHE got after me. Now I had told her about the gander chasing me before, but she was about to whup my butt, too, so I ran. Might not've been so bad if I hadn't told her she'd have to catch me to whup me. Anyway, I got a belting from Pop, and he had to pay for the goose--which Mama cooked for dinner. Durned thing was tough and stringy! LOL! Ya just can't win!

Getting back to the original question, using the lower HF bands is much more practical for getting over that tall hill. Doing so legally would require knowledge of 5 wpm code which frankly is too slow to be useable and two multiple guess tests whose questions and answers are published and readily available. A third test would give you all amateur privileges. Easy stuff. Buy a used TS-50 and hook it to a Bug Catcher and you are in business. 7.2 MHz during the day and 3.7 MHz at night will do the job. 160 meters requires too much effort in a mobile and is very noisy. As mentioned obtaining a Mexican license is costly--about $70, and requires you to go the the SCT office to get the forms, then travel to a bank to make the payment and get the receipt and then go back and wait for the license to be typed up. Figure a day. As for Dumbass Dave, I still haven't suggested that CB is bad, or that amateur is good. Dave, you wouldn't use a screwdriver to change a tire on your car. You need to use the right tool, and you aren't going to get over the hill with a line of sight frequency. If the guy was at the crest of the hill and needed to talk down into both valleys it would be a different matter, but it isn't. Sorry Dave!!!!, but you just don't get it.

Hi Dave,

Great post. But remember that you are talking with people that justify their illegal behavior by claiming that the CFR and USC, or just the parts that apply to them, are not really laws. Don't bother them with the truth of the matter, because the entire argument is based in logical fallacies, and they have a greater passion for freebanding and amps than they do for rational thought.

I used to listen to cellular. Then one day it was made "illegal" to
monitor. Nothing really changed in the world except that some
Big Money changed hands and all of a sudden I was made a "criminal"
even though I did nothing different.

All true in a theoretical sense, but practically speaking, this guy and all his dune buggy pals are not likely to go to the effort of becoming hams just to stay in touch with each other out in the boonies. And why should they? Ham radio wasn't meant to be an alternative to GMRS or FRS or CB. There must be some HF 'commercial' or 'business' service that would have the range and reliability they need.

www.sgcworld.com has an "all band" unit. It's a ham unit, but if you tell them you're going to use it to study volcanoes or the ice floes at the Antarctic, they'll tell you how to open it up for 1.6-30 MHz transmit. About $600, I believe. 20 watts.

Train, there are some good responses to this thread. You should read them. Myself, I really don't worry too much about the small linears. One response noted (quite accurately) that even 50,000 watts won't help you if the band is not open. Another response noted (quite accurately) that many hams don't run linears. They are not necessary. What higher power WILL do is allow you to work farther on what some think is ground wave. Ground wave doesn't exist at 27 MHz. What you experience is scatter. This can give you a couple of hundred miles (MAX) without ionospheric enhancements. F layer reflection or sporadic E will allow long distances WITHOUT high power. Oh, the other thing high power WILL do is likely cause problems with neighbors. This also can happen to hams. Much of this problem is that electronics sold in the US do NOT have to pass radiated immunity tests - which means much of it is susceptable to a CLEAN signal. Not your fault, but try telling it to your neighbors. Unfortunately, many come to believe that high power will solve all of their problems. No way, but it causes others. Besides all this, try not to blame all the hams for the inane antics of a few.

73 from Rochester, NY
Jim

ps - the hams really don't need the amps. 50 watts will allow you access to most of the world a lot of the time - you just pick the appropriate frequency. I used to run 25 watts (maximum allowed in my area at the time) on 160 meters and that gave me coverage of the lower 48 states at night. 20 and 15 meters gave me access to Europe most of the time (and I was only running 65 watts barefoot). No amp, no problem.

i just purchased a Cobra 148 NW ST for use in my pickup. the antenna that i got also a Cobra doesnt work very well at all.

i know that the knowledgable people here can help me out, what antenna would you use?

thanks in advance

4782. Does anybody remember...

Ham radio and CB Radio are two different radio services. Ham radio requires a license and CB doesn't. Setting up CB radio station is far easier and cheaper than a ham radio station. However ham radio is far more flexible than CB. It comes down to what do want and what will meet your needs. In your case you are trying to reach a friend but your signal is being block by a hill. If you want to stay in constant contact then perhaps ham radio maybe a better choice. However, if you are staying in contact with each other most of the time then why worry about the occasional loss of contact. Since your both moving you will reestablish contact anyway. For now, perhaps you should just make improvements to your antenna system and obtain a CB with single sideband. SSB is far more effective than AM. This inexpensive improvement maybe all you need.

As for why do some people here hate ham so much?

I guess its human nature. Some people like to put themselves into a class system and if you're not part of their class they hate you. It reminds me of the song The Merry Minuet sung by the Kingston Trio. Here's the lyric to it.

THE MERRY MINUET
Sheldon Harnick

They're rioting in Africa. They're starving in Spain. There's hurricanes in Florida and Texas needs rain.
The whole world is festering with unhappy souls. The French hate the Germans. The Germans hate the Poles.
Italians hate Yugoslavs. South Africans hate the Dutch and I don't like anybody very much!
But we can be tranquil and thankful and proud for man's been endowed with a mushroom shaped cloud.
And we know for certain that some lovely day someone will set the spark off and we will all be blown away.
They're rioting in Africa. There's strife in Iran. What nature doesn't do to us will be done by our fellow man.

>There's a new angle 'Aaron'.

Be realistic. This guy and his buddies probably have no interest in
becoming radio hobbyists. They are looking for a way to stay in touch
out in the bush. Why should he get a ham license when he needs the
equivalent of a cell phone? And suggesting that he bootleg on HF
frequencies is absurd and not a viable solution. Has anyone bothered
to ask him how high a "hill" and how far a distance he wants coverage
over? Are we talking 6,000 feet and 20 miles...or 600 feet and 2
miles?

It was always illegal to monitor, you just didn't know it. The
scanners were changed because too much other crime was happening
as a result of monitoring cells, like stalking and fraud. It still
happens, but not as much.

Well, there's the 160-190kHz lowfer band which would probably do
the job quite well, but there's no commercially made equipment
for it that I know of.

Unless I miss my guess, the purpose of running 50,000 watts is to
be heard above the guy on the other side of the parking lot running
40,000 watts. The rest of us have enough brains to move to another
channel.

I don't have one.. don't need one either.. It'd be nice to have one on noisier days, but really, there isn't any need with the new DSP filters and whatnot in the newer rigs.

Does this mean I'm not a "REAL" HAM? Watch your answer.. If you say "no", that I'm not a real HAM, then you undermine the AKC's position. If you say "yes" I am a real HAM, then you undermine someone else's position. Kindof a catch22, isn't it?

4793. FCC Busting Truck Stops For "Exports"

Newsgroup: rec.radio.cb
Date: 2001-11-10 09:36:50 UTC
From: voobner@yahoo.com
Message-ID: <fbc7a2.0111100136.41224b45@posting.google.com>
Source record: 103756

Check out:

http://www.arrl.org/news/enforcement_logs/2001/1006.html

To:
TRUCK-N-TRAVEL
32910 East Pearl Street
Coburg, Oregon 97408

CC: John Anderson, President
Eugene Trucking Haven, Inc.
800 Willamette Street, Suite 800
Eugene, Oregon 97401
RE: Cases EB-01-PO-188

Gentlemen:

This is an official Citation issued pursuant to Section 503(b)(5) of the Communications Act of 1934, as amended (the Act).

On July 23, 2001, agents from the Federal Communications Commission Portland Resident Agent Office observed that the following uncertified Citizens Band (CB) radios were displayed and offered for sale inside TRUCK-N-TRAVEL store located at 32910 East Pearl Street, Coburg, Oregon 97408:

1) Galaxy DX99V $439.99
2) Galaxy DX88 $399.95
3) Galaxy DX66 $280.00
4) Galaxy DX33HML $239.80
5) Delta Force $200.00

The Commission's records show that the above CB radios have not been granted an FCC equipment authorization. You are hereby warned that the marketing of those CB radios, including advertising, is a violation of Sections 2.803, and 15.101 of the Commission's Rules and may violate Sections 2.925 and 2.926 of the Commission's Rules. 47 C.F.R. Sections 2.803, 2.925, 2.926 and 15.101. Violation of the Commission's Rules is punishable under Section 503(b)(2)(C) of the Act by a monetary forfeiture of up to $10,000 for each violation per day, up to a maximum of $82,500.

Further investigation revealed that TRUCK-N-TRAVEL is registered with the Oregon Corporations Division as Eugene Trucking Haven, Inc., 800 Willamette Street, Suite 800, Eugene, Oregon 97401.

In accordance with Section 503(b)(5) of the Act, you are being given a period of 14 days from the date you receive this Citation to submit any statements you wish to make concerning the violation. In addition, you may request an interview to discuss this matter in person at the nearest Commission's office.

The Privacy Act of 1974, P.L. 93-579, December 31, 1974, 5 U.S.C. 552a(e)(3) requires that we advise you that the Commission's staff will use all relevant material information before it, including the information disclosed in your reply or interview to determine what, if any, enforcement action is required to ensure current and future rule compliance.

The knowing and willful making of any false statement in reply to this notice is punishable by fine or imprisonment under Title 18, United States Code, Section 1001.

Sincerely,
Binh Nguyen
Resident Agent, Portland (Oregon)

Note: The FCC advises that some of the five models of CB transceivers listed above were capable of operating on 10 meters.

i think i would prefer a magnetic mount, but would consider drilling
some holes to get good reception.

i'd like to keep the price below $100.oo

and it going on a 98 ford ranger w/ clubcab

4795. Antenna mount on a Grand Cherokee?

Newsgroup: rec.radio.cb
Date: 2001-11-10 12:22:09 UTC
From: Bob A <rfa5@optonline.net>
Message-ID: <RZ8H7.32699$%94.3897337@news02.optonline.net>
Source record: 103758

I'm looking for suggestions on how to mount an antenna on my Jeep Grand Cherokee. Right now I'm using a mag mount but I'd rather get away from it as it will eventually do a number on the paint, now matter how careful you may be. I'd also rather not drill through the roof as my ham radio antenna is there and I don't want swiss cheese as a roof! I have a roof rack, though it's a rather funny shape so I don't know if the roof rack mounts will fit on it properly. Anyone out there with a Grand Cherokee give me some ideas how you mounted an antenna on this vehicle? I think the manufactures go out of their way to make these things hard to mount things on! Thanks!

Bob

Hello Bob:

I am not the owner of any thing new, but I have seen some of the boys use a "L" bracket that was attached to the one of the rear light lens holes.

Isn't there a rear upper brake light, that could be removed, and have a L bracket placed in-between the light assembly and the body of the Jeep.

I've seen this done a few times on new vehicles, where the owners didn't want there vehicles to look like mine. I guess that the beauty of owning just a few years older vehicles.

The vehicles are designed to be mass produced and save the car, truck or Jeep manufacture money. The heck with us the buyers and maintainers, and radio nuts.

Jay in the Mojave

Its all about who has the biggest amp and keying over people who want
to actually use the band. I do notice on CB the people with the big
amps spend all day clogging up 11meters talking crap to themselves
ruining it for others. 100 Watts is the most people should run on 11
meters splattering the band for a whole 100khz sometimes. now it does
not seem to be a big problem on the upper frequencies though since
most of the keyclowns are in the regular 40 or on some of the lower
bands AM

Notice the emphasis of the word NEED... WANT? Maybe. USE?
Certainly, if desired. NEED? Hardly.

Hi Moparholic,

I would venture to say, based on my own observations and on-air time, that most hams don't use amps. I don't (yet) because, as Jim Hampton said, working on the lower bands is just as easy without whereas 27 MHZ doesn't exhibit the groundwave characteristics one might desire. I know that many hams and CBers alike equate huge output power with a huge signal--kinda like when you romp down a 440 six pack or a 409 Chevy. If you think about it a minute, running the "pedal to the metal" makes about as much sense in radio as it does in a car, but for different reasons; in a car, it is dangerous, in radio it is simply wasteful. The generally unspoken rule and gentlemens' agreement states that "one shall run no more power than necessary to establish and maintain com-munications". The obvious reasons are: 1) wasteful expenditure of power, and 2) potential inter-ference to others attempting to use the same circuit. In endeavors such as ham radio, this non-binding agreement (which is only a guideline BTW), this is not enforced--one can run up to 1500 watts on most bands. Another example where this rule IS observed more closely is military comms. Case in point: I operate on USAF frequencies due to my membership and licensure in USAF's Auxiliary (Civil Air Patrol). There is NO restriction on the amount of power one can run on HF. To some people, this would be interpreted as an open invitation to run as many "bird watts" (that phrase always makes me giggle because a watt is a watt is a watt. LOL) as one wants. NOT! As long as I can establish and maintain comms with 50 watts, I am to do so, and CAN do so on the lower HF frequencies. When other factors such as noise or band conditions aren't conducive, then I may increase power to 100, 500 or 1000 watts IF that's what it takes. OR, I can employ a beacon (or even WWV) to find another frequency that will carry the traffic better--which is the preferable solution. How does the net control know if I am abusing the use of RF power? Well, if everybody else on the network is using 100 watts (the norm on HF) and I am pumping out 2000 watts, it will be obvious and I will be required to 'splain

why I am running power when everyone else is doing just fine with nominal power. I might even get a "pink slip" from the
frequency manager. In a professional, emergency communications environment, training and ex-
perience are relied upon to provide knowledge as to when to use extra power. In amateur comms,
it is not so strict, and the fact is, one can run power all day long as long as he adheres to other
rules and good operating practice. One CAN, however, be enjoined from running power on a
regular basis if he cannot demonstrate a need, if he is causing interference, or if other operating
practices (bad) are exacerbated by the use of an amp. As long as the ham draws no adverse
attention in other issues, he will likely be able to run 1500 watts as much as he likes. Still, most
of us don't do so because amps are expensve, take up room, and we hardly ever find a need. I
am in the market for an amp--a friend has a really clean SB200-----just to use primarily for AM
on 40 meters. I would like to use it to bring my PEP up to around 300-400 watts. Am fades a
lot, and this would help in this area and a couple others--40 watts just isn't enough on 7290 AM.

I hope I have shed some light on this.

73

Contrary to popular belief Aaron is not a Super Hero, he can only be expected to try and clean up hobbies he is associated with and wants to see a change for the better.Perhaps you should say something to the criminals of alt.dss.hack, bit we know you won't you like stealing frqs for free correct? If you have no coincense breaking FCC Radio laws what does breaking a few more do. After all no one is getting hurt right?

More than likely you are correct. But using the Rain Report is no guide. It reports only those with Amateur implications, like busting the dump trucks on ten meters, and does not report other items. Riley is a Special Counsel, I notice now for more than the Amateur Service; the work of the newly revived Enforcement Bureau goes unreported.

"Trainpuppet Bear"

I was on the outskirts of a little Jersey town,
Trying to get a blowjob from trainfag the keyclown.
The old CB was blaring away on channel one-nine
When there came that fag assed voice on the radio line.
And he said, "Breaker, one-nine, is anyone there?
It's train the queer, truckers, and I've got my asshole bare."
Well, I keyed the mike and I said, "Well, you got it,Train queer."
And the little punk's voice came back on the air.
"'Preciate the break. Wanna stick yer pekker in my end?"
We discussed his pricing, and then he began:

"Now, I shouldn't bug you with my faggot assed fluff,
Mom said "I suck off the truckers, son, and 1 slut is enough."
But, you see, I get horny and I crave truckers dicks
'For a very low fee, I'll give a great suck and lick.'
I came back and told him to fire up that mouth
And I'd pump his gay lips as long as he'd like.

"This was my dad's radio," the little boy said,
"But he's doing five to seven for making 9 year olds give head.
Dad was turned out about a month ago.
Now he's trying to survive gang rape of his asshole.
Mom has to whore now to make ends meet
And I wanna help out and suck on your meat.
She says not to worry, that her cunt is still tight,
But I hear her crying sometimes late at night.
You know, there's one thing I want more than anything else to see.
Is a dripping and throbbing truck driver's pee pee,
Cuz, you see, my dad used to take me for rides on his bone
But I guess that's all over now since my daddy's gone."

Not one breaker came on the old CB
As that little faggot train talked gay sex with me.
I tried ignoring my hardon, but the lump just wouldn't stay down
As I thought about my gay lover back in Keyclown town.

"Dad was gonna pimp Mom and me later on this year.
Why, I remember him saying, 'Someday you will be a big faggot too, little train.'
But I know I'll never get to ride a trucker again,
But this old base will keep me in touch with my gay keyclown friends.
Trainedpuppet's gonna back on out now and leave you alone
'Cause it's about time for me to massage my bone.
But you give me a shout when you're passing through
And I'll sure be happy to talk gay sex with you you."

Well, I came back and I said, "Before you go ten-ten,
What's your home-twenty, little CB friend?"
Well, he gave me his address and I never once hesitated
'Cause this hot load of jizz wasn't gonna be masturbated.
I turned that truck around on a dime
And headed straight for Jackson Street, 229.

And as I rounded the corner, boy, I got one heck of a shock--
Eighteen-wheelers were lined up for three city blocks!
Why, I guess every driver for miles around had caught Faggottrain's call.
And that little gay boy was licking their balls.
For as fast as one driver would get off in his ass,
Another would carry him to his truck and pump him again.
Well, you better believe I took my turn at riding Trainedpuppet.
I carried him to the sleeper, and pounded his tuffet.
And, buddy, if I never live to see happiness again
I want you to know I saw it that day, in the face of that little fag.

We took up a collection for him before his mama got home
And each driver said "Thank you for licking my bone".
He shook my hand with jizz on his chin
And said, "So long, trucker, I'll blow you again!"
I hit that interstate with shit on my dick
Smiling and remembering little trained puppet's lick.
"Breaker, one-nine," came a voice on the air,
"Just wanna say "fuck you" from Mama gay train.
That bastard little queer won't split all that cash.
'And now I can't pay the rent from selling my gash.
I'll sign off now before I start to cry.
Next time please fuck me. Ten-four, and goodbye."

"Trainpuppet Bear"

I was on the outskirts of a little Jersey town,
Trying to get a blowjob from trainfag the keyclown.
The old CB was blaring away on channel one-nine
When there came that fag assed voice on the radio line.
And he said, "Breaker, one-nine, is anyone there?
It's train the queer, truckers, and I've got my asshole bare."
Well, I keyed the mike and I said, "Well, you got it,Train queer."
And the little punk's voice came back on the air.
"'Preciate the break. Wanna stick yer pekker in my end?"
We discussed his pricing, and then he began:

"Now, I shouldn't bug you with my faggot assed fluff,
Mom said "I suck off the truckers, son, and 1 slut is enough."
But, you see, I get horny and I crave truckers dicks
'For a very low fee, I'll give a great suck and lick.'
I came back and told him to fire up that mouth
And I'd pump his gay lips as long as he'd like.

"This was my dad's radio," the little boy said,
"But he's doing five to seven for making 9 year olds give head.
Dad was turned out about a month ago.
Now he's trying to survive gang rape of his asshole.
Mom has to whore now to make ends meet
And I wanna help out and suck on your meat.
She says not to worry, that her cunt is still tight,
But I hear her crying sometimes late at night.
You know, there's one thing I want more than anything else to see.
Is a dripping and throbbing truck driver's pee pee,
Cuz, you see, my dad used to take me for rides on his bone
But I guess that's all over now since my daddy's gone."

Not one breaker came on the old CB
As that little faggot train talked gay sex with me.
I tried ignoring my hardon, but the lump just wouldn't stay down
As I thought about my gay lover back in Keyclown town.

"Dad was gonna pimp Mom and me later on this year.
Why, I remember him saying, 'Someday you will be a big faggot too, little train.'
But I know I'll never get to ride a trucker again,
But this old base will keep me in touch with my gay keyclown friends.
Trainedpuppet's gonna back on out now and leave you alone
'Cause it's about time for me to massage my bone.
But you give me a shout when you're passing through
And I'll sure be happy to talk gay sex with you you."

Well, I came back and I said, "Before you go ten-ten,
What's your home-twenty, little CB friend?"
Well, he gave me his address and I never once hesitated
'Cause this hot load of jizz wasn't gonna be masturbated.
I turned that truck around on a dime
And headed straight for Jackson Street, 229.

And as I rounded the corner, boy, I got one heck of a shock--
Eighteen-wheelers were lined up for three city blocks!
Why, I guess every driver for miles around had caught Faggottrain's call.
And that little gay boy was licking their balls.
For as fast as one driver would get off in his ass,
Another would carry him to his truck and pump him again.
Well, you better believe I took my turn at riding Trainedpuppet.
I carried him to the sleeper, and pounded his tuffet.
And, buddy, if I never live to see happiness again
I want you to know I saw it that day, in the face of that little fag.

We took up a collection for him before his mama got home
And each driver said "Thank you for licking my bone".
He shook my hand with jizz on his chin
And said, "So long, trucker, I'll blow you again!"
I hit that interstate with shit on my dick
Smiling and remembering little trained puppet's lick.
"Breaker, one-nine," came a voice on the air,
"Just wanna say "fuck you" from Mama gay train.
That bastard little queer won't split all that cash.
'And now I can't pay the rent from selling my gash.
I'll sign off now before I start to cry.
Next time please fuck me. Ten-four, and goodbye."

4817. Re: Train's TRUE story!!! <With apologies to Red Sovine>

Red Sovine just rolled over in his grave, TWICE... What a way to ruin a
good song.

Tasteless, yet unrefined, as usual.

And headed straight for Jackson Street, 229.

And as I rounded the corner, boy, I got one heck of a shock--
Eighteen-wheelers were lined up for three city blocks!
Why, I guess every driver for miles around had caught Faggottrain's call.
And that little gay boy was licking their balls.
For as fast as one driver would get off in his ass,
Another would carry him to his truck and pump him again.
Well, you better believe I took my turn at riding Trainedpuppet.
I carried him to the sleeper, and pounded his tuffet.
And, buddy, if I never live to see happiness again
I want you to know I saw it that day, in the face of that little fag.

We took up a collection for him before his mama got home
And each driver said "Thank you for licking my bone".
He shook my hand with jizz on his chin
And said, "So long, trucker, I'll blow you again!"
I hit that interstate with shit on my dick
Smiling and remembering little trained puppet's lick.
"Breaker, one-nine," came a voice on the air,
"Just wanna say "fuck you" from Mama gay train.
That bastard little queer won't split all that cash.
'And now I can't pay the rent from selling my gash.
I'll sign off now before I start to cry.
Next time please fuck me. Ten-four, and goodbye."

I especially like this one... I think they should worry about there own kind, in there own bands, before they worry about those of us on 11-meters...

October 3, 2001
Mr. Paul M. Warren
5329 S Monte Place
Oklahoma City, OK 73119

Re: Warning Notice--Amateur Radio license N5WLK

Dear Mr. Warren:

Information before the Commission indicates that you are deliberately interfering with other operators in the Citizens Band Service, playing music and other sound effects and using profanity/obscenity. Information also indicates that you are re-broadcasting Amateur communications over CB, and CB communications over Amateur two meter repeaters.

We previously warned you about such incidents on September 28, 1999. Such conduct will not be tolerated; and whether occurring over the Citizens Band or on Amateur frequencies it will jeopardize your Amateur license N5WLK and subject you to a fine in the range of $7,500.

4826. Re: what antenna should i use?

Newsgroup: rec.radio.cb
Date: 2001-11-10 20:34:54 UTC
From: phineas@engineer.com
Message-ID: <a031bae8.0111101234.220ccfba@posting.google.com>
Source record: 103789

It all depends on what you really want to do. If all you want to do is talk AM(Regular CB) you can go with any mag mount bottom load antenna. Wilson(Mags) seem to work the best, although the Radio Shack mags also perform pretty well. Most of these mage mount whips start around 30 dollars. If you are a little more into something advanced radio like SSB, and want to hear low power signals, you will need more than a whip. In which case, I could recommend the a 3' Wilson FGT Silver load, on a 5" or larger Magmount. This will cost you about 50 dollars. This antenna will give you good gain, and wont blow off the top of you truck. At least under 70mph. THe ideal way to go is to get a tripple magmount and go with an open coil. This solution will run you a hundred including the antenna. I have several different antenna I inter-change for different performance. Anything else, you wil have to drill a hole.

Hope this helps.

Phineas

Hello All:

Looking for a Venus-II linear amplifier. Works on 80, 40, 20, and 10 meters.

Its built in two chassis, one for the amp and one for the power supply. Uses 2 each 6146's in a grid feed circuit.

Has Venus-II on the front, and a RF meter, says by built Long Hauler in Long Beach California USA, on the back. Built in the late 60's to mid 70's.

Can be junk to mint condition.

Jay in the Mojave

Quite true... but then I never said it was illegal.

But if you expect a guy named "Prozac" to be subdued on drugs, then would you expect a pop group called "The B52s" to be pro war?

>
> Do you excpect the AKC to be tha saviour of the world
===

It's only the "AKC" that see themselves this way.

The rest of us know what to expect, which is why we use killfiles on certain "AKCs". Insults, profanity, false accusations, multiple posting of a message, and sexual innuendos are certainly not going to save the world from anything.
Such posts suggest that the "pro-legal" issue is not the persons main concern... just a smoke screen for "Trolling" or a personal hatred for CBers in general.

Such tactics give the term "legal CB" a bad name.

When a newbie joins the group, and wants to know about whether to run amps or not, who will he listen to...
1. A bunch of foul mouthed a$$wipes with bad attitudes,
or
2. Helpful people with a friendly attitude.

It is possible to be "pro-legal, without being in group 1. This is proved by certain people on this group, who are clearly in favour of legal radio use, but are also friendly and helpful.

Once you get blocked by someone, you lose the chance to debate the issue with them, and so lose any hope of changing their view on illegal CB.
If this doesn't bother an "AKC", then it is clear that the "pro-legal" message is nothing more than a smokescreen for newsgroup Trolling.

But then, considering the following:
1. There are many more CBers on CB than on this ng.
2. Many on here are "Hams", and not CBers.
3. Of the CBers here, only some are "illegal" CBers.
4. Of the very few illegal CBers here, very very few are close enough to actually be a problem to you, or any other "AKC".
5. Of those "illegal" CBers, NONE are changing their views.
I find it impossible to believe that the time some "AKCs" spend on here is of any use other than for Trolling value.

Regards,

Brainbuster.

I was thinking about how people seem to read the Bible a whole lot more as they get older, then it dawned on me .. they're cramming for their final exam.

===

I wouldn't bet on it coming to him.

This "upgrade" attitude is a by-product of the misconception that either "Ham radio" is an upgraded CB, or that CB is a lower grade "Ham" service.
This delusion leads the person to the mistaken belief that every CBer is just a "Ham wannabe".
This is probably what has lead to the lowering of the "Ham" entry requirements both in the US, and UK. People thinking that all CBers want to be "hams".

The answers are within their reach, but they have their eyes shut. Until these people open their eyes, they will never see that which stares them in the face.

Regards.

It was never a good song. This version is better, and accurate ta boot.
I laughed like hell myself.

If you get 10% bandwidth out of a center-loaded whip, there is a resistor
hidden in there somewhere. An efficient radiator has about plus-minus 2%
between 2:1 SWR points. Nothing in the world has a better SWR bandwidth
than a large 50 ohm resistor.

WHOA now!!

What part of 2, 3, or 4 megs requires "no" authorization? I never heard
that. For example, I know that CAP has authorizations in 2 and 4 mhz.
......not to mention military. Four megs, for
example is chock full of MARS (Military Affiliate Radio System), USAF and
CAP frequencies.

Don't be encouraging people to "freeband" there; we've got enough trouble
with 'em up in 10 meters. <<g>>

Again, all depends on the distance and terrain. If he wants to get
over a 6,000-foot-high mountain range to talk with pals 20 miles away,
there's no inexpensive, off-the-shelf, license-free solutions to that
problem. But if he's just trying to get over a 600-foot-high hill to
his buddy less than 2 miles away GMRS/FRS (simplex) would do it no
problem, doncha think? The smart thing would be to borrow a couple of
FRS handies and experiment on the next trip out.

I once talked from Kansas City to West Virginia on a 2.5-watt rig
using a ground plane antenna on a 10-foot mast. I talked
mobile-to-mobile almost 40 miles from a quiet suburb using a stock
rig. I've had other such experiences.

Hi Jay,

I know a guy who's got two of these. They produce a deep, full bodied, awesome sound. I don't think they'd be too appreciated on the ham bands. I'd venture that this "hi-fi" sound comes at a price, signal width. I do believe that there are som folks on 75 that wouldn't mind too much. ;-) Take care and 73.

I honestly am not sure, but I doubt 20 watts will do it. Usually one is talking 50 watts or so into a beam - so my guess would be (using a whip) something on the order of a couple hundred watts (AM, FM, SSB, or what have you) - but that is a guess.

73 from Rochester, NY
Jim

It's not suprising to see the same old diversionary tactics employed
here. The jist of the original question, while maybe not precise in
terminology, was: If licenses are so easy to get, why don't they
just get one?

And it's also not suprising that the question has once again been
left unanswered.

Thats where Riley has started, he is a ham operator and put most of his efforts in the amatuer bands with hams it is usually easier to catch violators, since everyone must ID with a valid callsign, and the rest of the ham community usual helps locating and finding rule breakers hence "self policing". So with that in mind enforcement occurs in the ham bands somewhat easier and more regular. CB complaints usually occur when someone is interfering with a neighbor etc.. and this person lodges a complaint. Only now this makes the illegal cb operator known to the FCC and they then can be investigated, otherwise the FCC is not going to be doing any randoms stops in regards to cb enforcement. Maybe things will change but as of now it is sporadic enforcement on 11 meters.

Cross-posted to: alt.ham-radio.mods,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.cb

The 6146 was introduced by RCA in 1951, as a replacement for the 2E26 transmitting tube. It allowed you to crank-up the output of a transmitter (one using a 2E26 of course) without any modifications; you simply remove the 2E26 and plug-in a 6146! The 6146 could be used in the 2 meter (144 MHz) and 220 MHz VHF bands with reduced output. In the '50's and 60's, it was also used as finals in hi-fi audio amps, PA systems, and guitar amps.

The hi-fi version of the 6146, the 6550 (a.k.a. KT88), was later introduced for safety reasons (dangerous plate cap on the 6146) and is quite popular in hi-fi today. The 6550 is also used as a transmitting tube, though not as popular as the 6146. I have seen both 6550's and 6146's in illegally built radio jammers and CB radios.

Hello Igor, uh Moparholic:

The amp is wanted by a local who whats one. He is assembling his station as his farther had in the 70's.

These amps where made in someones garage, and the orginal Venus amp had one single 6JE6C/6LQ6 tube, in grounded grid. They even came as a kit.

They wern't earth shaking by any means, but did work well, and have good audio. Had approx 10 dB gain which helped out the signal a lot, without buying stock in Boulder Dam.

Given the cost today it is pretty silly but for a station in rural area
where 4 watts don't cut it that is almost a sensible amp. Bet it did work
pretty well as an AM linear if you kept the grid real close to rf ground.
Use a voltage doubler off the 5 volt lead for bias and a 750 power
transformer and it should work gangbusterly.

I have NEW slugs that will work in either the BIRD or COAXIAL DYNAMICS watt meters-following are for 2-30 MHz (contact me for other wattages and frequency ranges)

> 5KW-$150
> 10KW-$160
> 25KW-$170

Also have NEW meters made by Coaxial Dynamics which will read both PEP and "Bird Watt" - at the flick of a switch....These meters have a larger size meter than the Bird models-Made in USA -2 year warranty

> These are EXCELLENT meters - $390

Please Email all serious inquiries

Thank YOU

Hello Dick:

Yes these where pretty popular little amps, a few years back. They had a trick little built in Low Pass filter that you could tune. And seamed to be very clear, little or no TVI. Back then the phone where immune to RF somewhat.

The neat thing was that a station could run one of these smaller amps all day, the tubes weren't being driving by other tubes, or being over driven, in the sense that some other amps where made to make the watt meter go full scale.

So running these small power amps, (dead keying at 20 to 40 watts, single or you walked on the wild side and went with the two tuber amps) allowed you be a reasonable station without all the ozone layers being effected in you local area. This basically let you shoot a little skip, chat with the locals, and let the neighbors watch TV.

There was also a "Shrew" small Linear Amplifier, that was the same design, only one configuration was made, with one single 6LQ6 tube, but these guys painted the chassie green, and had a tuning light, as the RF output indicator.
These amps where more popular, because they looked better, being painted. The RF Output Indicator Light, was GE-47 Bayonet Light Bulb, in a insulated light socket (that was in every surplus store in Southern California at the time. In fact there still over at Apex Surplus in Sun Valley Ca.) that had 2 1/2 to 3 turns of wire across the filament, that was in series of the antenna output circuit. The Shrew didn't have a low pass filter, but was pretty.

I don't think they had bias applied to the control grid, but possibly a Cathode resistor, of some small value, I am just not sure.

I have located a set of Shrew's (One piece amp, and one piece the power supply) in Washington State, but the gentelman is quit proud of the Shrew set.
Why couldn't he want mirrors, beads, trinkets, Cracker Jacks, or antenna parts?!?!?!?!?!?

>Which is a better radio, a Grant XL/LT or a Texas Ranger 296 ? Thanks

Easy. The Texas Ranger uses a Ranger/RCI clone of the Uniden board/chassis. That's actually their selling point. Uniden has a higher standard of QC, but is no longer in production. If get can get your hands on a new Uniden Grant XL, GRAB IT! You will then have the same board/chassis as the venerable Cobra 148/2000GTL with the associated receiver performance.

This is not to badmouth the TR-296, it'll probably be just fine. However, I've NEVER bought a Uniden-based klunker.

Might I also suggest that you have a Channel Guard installed in whichever rig you choose.

www.cbcintl.com/cgfilter.htm

www.cbcintl.com/docs/cghookup.htm

The already excellent receiver of the Grant XL conbined with the improved ACR provided by the Channel Guard actually results in a dramatic improvement. (I can actually have a conversation with a similarly Channel Guard equipped station on ch. 5, no matter what the local crew on ch. 6 is running...if you get my drift. My niece's TRC-485 employs a Channel Guard.)

Good luck to you. Buy that Uniden! ;-)

So Amateurs are allowed to use "spectrally dirty" equipment??

> and the IQ of the operator seems to be inverserly proportional to the
> output power of the amplifier.

Are you suggesting that most radio amateurs have a low IQ?
The UK allows less power than the US, so the UK Amateurs must fit between a
US Amateur, and a legal CBer in IQ level.

> BTW, Europe, South America, West Coast, Alaska - from the East Coast, all
> barefoot on a TS-520.
> Believe me, a REAL ham doesn't NEED an amplifier....

It has also been said that a "real ham" builds his own equipment, so a
"real ham" does not need a fat wallet to buy the equipment he cannot be
bothered to build.

UK Amateur shops sell wire antennas, and ready made patch leads (at very high
prices) because so many Amateurs cannot even be bothered to solder a
connector.
The shops and manufacturers are surviving very well with all the sales of
high priced "Amateur" equipment, and high priced repairs of that equipment.
Amateur radio seems to be becoming more about money than radio theory.

Brainbuster.

Hi Moparholic.

So people who have no respect for laws regarding stalking or fraud, and no fear of getting caught and punished for these are scared s***less that they may get caught listening on a scanner.
Makes nearly as much sense as a bendy rubber nail.

Surely the only time you could get accused of listening, is when you are already accused of a more serious crime where you *could* have obtained the information by that method.
It must be almost impossible to prove that someone listened to a transmission... there could be no physical evidence that the crime ever took place... and certainly none to tie a person to the *alleged" crime.

So, what is the incredibly scary punishment for listening to these services... a bullet in the head?

Yep, the "American" Taliban is HERE ! Listen to 5070 Shortwave tonight @ 10 Eastern time to hear what the Taliban did in Afganistan, and what the "American" Taliban is doing here! What does this have to do with your CB? IF the "American" Taliban suceeds in doing the same thing that the Afgan Taliban did, yo CB is next !Also may be on www.texemarrs.com or worldofprophecy.com on your commpooter for those who don't have a SW radio because they bought too big of an N8 approved liniker!
Dave!!!!!!!!!!!!

You know, I have had my share of feuds with HAMS even after I became one recently. If you even transmit with a newer call sign, some HAMS wont even talk to you..But this is a CB group right?...lol

As far as amps, all you will need most of the time is a good antenna. You would be surprised on the results you get output-wise just by having a good matched antenna. Other than that, good modulation is the key. I will put 50 watts of swing, a good antenna system thats matched, and a good mic clear mic gain over a 200 watt carrier anyday. I have proven this many times. Most of the people that use alot of power just have nothing better to do than to compete for the radio waves. That is the only reason why they do it. Listen to all of those guys gruntin and yelling audio all day. Some just wont say anything. Just to prove they got the power.

Getting off of the subject a little, I remember when high power car stereos came out. You know the ones that rattle your car at the stop light. Most guys I met that had those radios were pumping out all bass. This one guy had 2000 watts in his stereo. All I had was a 25w Cassette deck, driving a 40 watt EQ, with 2 door mounted 6x9 three ways. Of course, he had junk. My system was all impedance matched, and had matching Frequency responce etc.... Not only did my setup sound a whole heck of a lot better than his, but I could get 92db out of mine. He could only get 106db out of his with 3 times more equipment.

Just like with car stereos, CBs work out to be the same thing in the end. I dont put down people with amps, but if they were really happinin, they would be shooting skip, and raising hell on the band by having the best setup, rather than the most power.

Phineas

Um, Tim.....

Go to QRZ.com and check out KC8RKQ... That's my call. Check the class of license...

I'm ON HF.... Been talking on 40 an 75 meters for the last two months.. still haven't had a need for an amp... An efficient antenna for the bands in question is really all that's needed... That and 100 watts will let you talk and hear around the world.

de KC8RKQ

The early Ampeg SVT bass amps are the only ones I am aware of which used 6146's, and they were later changed to 6550's..

> The hi-fi version of the 6146, the 6550 (a.k.a. KT88), was later
> introduced for safety reasons (dangerous plate cap on the 6146) and is
> quite popular in hi-fi today.

Unless you have a Peavey Roadmaster guitar amp head, where the factory wired pin #1 as a B+ tie point. I've seen two of them done that way, and on the first one I found out the hard way to the tune of, I think it was 600 vdc across my little finger, cuz the stainless ring around the base of the tube is tied to pin +1 which is supposed to be grounded..

> The 6550 is also used as a transmitting
> tube, though not as popular as the 6146.

Yup, 6146's are used in many of the old tube rigs, including my old Heath SB-101's and now in my Collins KWM-2. Fortunately, I have a few NOS 6146's to last me for a while..

Yeah, it's actually pretty sad. Uniden is out of the USA CB SSB business. They've even discontinued the Washington. As for the TR-296 being made in china, I really couldn't tell you. Many of the old Cobras (Uniden chassis for Dynascan.) were made in Taiwan R.O.C. though. They were fine units. I can also say that I've owned some Ranger built "clones" that were built extremely well and performed just as well as their Uniden counterparts. I look for the new Galaxy DX 2547 to be such a rig.

You just can't go wrong with the Grant XL straight from the carton though. Especially if you're planning on performing receiver enhancements. It's a perfect starting point. Take it easy.

Hey Jay, how does an RF amp have "good audio"? Is that anything like
using a smaller RF amp to "modulate" a larger one?

I should add that the 8552 (I think that's the number) was a 6146
with a 12V filament.

Yep, it's here. It may be better than the recent past. I heard that people don't want to go out, so they are getting on their bases more this season. I got 1 indication of this so far. Has any other CB shops seen any indication of Base or antenna sales increasing, or you Bases out there, any more activity on the channels because of 9 11 ?

Dick. Please. *Must* you encourage CBers to use amps?

Honestly. You are a ham. Jay is a ham (ashamed of his callsign). What
the heck are you guys doing here in a CB group promoting linear use as
"sensible"?

inigo@montoya.net (D. P. Roberts) wrote in message
news:<3bf3c75c.8981333@news.earthlink.net>...
> Go to a law library. Most big cities should have one. Take a look at
> the some four MILLION pages of laws.

Because you yourself haven't read them, you assume they have something
to do with taking away the average mans rights.

They don't.

Among the 4 million pages in the law library are those covering
Administrative Law, Family Law, Real Property Law,
Bankruptcy/Debtor/Creditor Law, Health Law, Business and Corporate
Law, Intellectual Property Law, Commercial/Consumer Law, Labor Law,
Tax Law, Constitutional Law, Law Practice Management, Tort Law,
Criminal Law, Transportation Law, Environmental Law, Municipal Law,
Wills and Estates Law, and Ethics.

Perhaps you are thinking of the "Blue Laws" that are kept on some
states and communities books as a matter of "local tradition" such as
prohibitions against saddling horses on the Sabbath, etc. One could
hardly compare Federal Law with these.

> Then come back and tell me that
> you aren't violating at least 100 of those laws RIGHT NOW.

We're not.

> You break so many laws every day that you should spend the rest
> of your life in jail.

No, we don't. But you want people to think we do. So your CB
rulebreaking seems more acceptable.

> Now what do you do?

Be saddened by your ignorance.

"That's easy to explain. As another poster a short time back said about
Part 95 rules "I don't care", well you see what happens when that mind
set gets applied in a different context. It is very apparent they,
the terrorists, didn't care about human life either,
including their own. "

Regarding the WTC attack on 9/11/01

> CBer's...yet.

You want Twisted's position as the news group punch clown now? All you have to do is start claiming you talk to "saucer men" and collect "jock straps" on the wall. Or failing to criticaly read the sig file too.

And as far as my sig file goes it specifically mentions "Twistedhed", not you, nor CBers in general, but that could change if you want to complain about it any more. I wonder what I could think up using "Moparholic"? Hum, seems to rime with "Alcoholic", I'm sure I'll think up something good.

Since Twisted likes to waste so much of his time looking for old posts of mine, and others, to resurrect, for purposes which seems to elude even him, I though I would give him something fun to read when he finds them.

That is your opinion. I'm simply stating the FBI would be totally negligent if they did not consider the possibilities.

> To try using a large KW signal as cover for a small hand held signal could be
> so effective that they would get a greater range from their voices... without
> any extra comms tools. Have you tried "talking over" two very powerful
> signals using handheld CBs???

Like I said ->>> Go back and reread my comments CAREFULLY.

==========
> The music playing, swearing, high power amps, etc must provide great cover
> for the terrorists messages.

It would.
==========

Nothing in my reply said anything about talking over any station. Now to address your comment. Who said the KW station has to be anywhere near where the handhelds are used number one? Also by just filling up any given channel with useless noise, potty talk etc. It then become easy for a quick and brief message to go unnoticed. That same idea applies to a room filled with loud talking people. Real easy for two people close together to exchange a quick message between themselves unnoticed by several others in the same room who are deliberately trying to monitor such conversations.

Now what got us in to the present mess, with 5000 dead or missing and two destroyed buildings, is because nobody though it was possible that a handful of people would turn jumbo jets in to flying guided missiles. Now we know better. But of course the closed mind type of thinking that blinded everybody to the possibility, including our wonderful government and now a fact, it could happen seems to be repeating itself here. So everyone has a choice, either admit it can happen, or wait until another building is destroyed, bridge blown up, etc., and the admission by the government that they didn't consider the idea seriously.

I ran 50 or 60 Grants across the counter when I was in business, and had ONE come back, for a polarity protection diode! (Nuff said! The RED wire is hot and the BLACK wire is ground!!!) I had a Texas ranger for my own use for a while, and while I thought it was an "acceptable" radio, I never had that rock solid feeling about it that I did with the Grants. I have several friends that have experienced some trouble with the TR's, notably cold solder joints in 2 of them, a hallmark of Chinese PCB's. The Grants are a good example of what's rapidly fading from the scene, a good value. Unlike many of the lower end exports, which can be had pretty cheaply, a Grant can be expected to give years of service, and it can still be modified and tuned for some really strong performance should the owner be so inclined to run afoul of the thought police. Go with the Grant, if only to be able to have one. Like the "real" 148's, they're a vanishing breed.

So if on September 10, 2001 somebody told you that at least 3 jumbo jets would be hi-jacked by four men on each plane, and armed with nothing more than "box cutter knifes", and then intended to crash two of them in to the world Trade Center towers in New York and the third plane in to the Pentagon, would you have believed it could REALLY happen? Or would you just laugh at their face until the morning of September 11, 2001 at around 9:00 AM? Just think for a minute, those events may never have happen had this country been a bit more "paranoid" about Terrorist activities here at home.

I agree Bert, but the links don't seem to be working. Here's one I found that features the CG IF filter.

http://members.tripod.com/~Malzev/cb-radio/filter.htm

I had one installed on my old AR-3500, worked like a charm. I had the old 2000GTL too and the receive was outstanding.I also had a 148GTL-DX with a nice receiver and the board was a Ranger EPT-3600 series clone. A good receiver often sets the "great ones" apart from the rest of the pack. I'm not sure if you remember the ARF2001? Great "ears!" Take care and 73.

Mark

P.S. Don't think that I missed the fact that you (conveniently) left out a link in your receiver chain. ;-)

Funny is it not that our wonderful government first stated that airing the videos, from Osama, on nation wide news was just fine, and now they flipped flopped their position and HIGHLY recommend against airing any such videos because of the possibility of hidden messages to Terrorist cells still operating in the U.S.?

Hello Richard: Kind of a neat thing about these small RF Linear Amplifiers, that had 1 and 2 tubes of various tube numbers, is that a old TV Set's lying out to be picked up by the trash guy, usually had most all the parts.

The relay, the RF Output Light Socket, the Tune & Load variable capacitors, SO-239 connectors, and meter could easily be found on a wonderful Saturday, looking thru the local Surplus stores.

This was such a great time, with the old geezer who worked at the Surplus Store, telling the story about all the Surplus equipment and how it was used in the great war and such, that was on the shelves. He would help us kids pick out different parts and pieces for our transmitters, receivers, antenna tuners, linear amplifiers, or what ever we where going to set on fire that afternoon. Always throwing a few things that didn't sell in the pile, and telling us to try these things out.

The real great time and treasure was picking out the meters for the front of the amp. We would figure out how it gets hooked up later. Some of the meters where RPM, Water Temperature, Hydraulic Pressure, G Force, and a Gillzion other units of measure measurement we had no idea as what it was used for, but if it looked bitchen, and wasn't to expensive, around a buck, we bought it. Some even had internal lights that would back lite the meter, simply osume. We usually broke the meter trying to replace the lights.

If your amp was doing somewhere in the neighbor hood of 3000 pounds of Hydraulic press, or 17 Bazillion Giznosticks you where obviously getten out!

Have a cow on someone else's time Voobsie.

For those who have not killfiled her - Voobsie is female regardless of names -- I would strongly recommend doing it on the theory that when it is too late to save your shoes and socks, at least pull up your pantlegs.

Yeah and the guy that owned a set of Greenlee Chassis punches and a good nibbler for the power trans never went wanting for beer and skittles. When I could afford a reamer to clean out the holes drilled for the controls it was hog heaven time; all that time spent filing could now be put to use drooling over a circle saw for the meters. Mounting those things in a boiler plate panel was a bitch even if max output was Warp 5. And steel chassis man, none of this aluminum stuff; if I wanted aluminum I'd steal my mom's cookie sheet.

And the ozone high from firing up the half-horse drill with the sparking commutator was nothing short of fantastic. Helped you ignore the bellowing from the rest of the family who had been watching the tube. Nothing equalled a 50 yr old Milwaukee drill for TVI.

Here in Spokane, in 1999, Robert Charles Grinnell was sentenced in
federal court for fraud using a scanner. He got fined $5000, 6 months
in prison, 3 years probation, and had to pay $43,240 in restitution.
That's just one example, no doubt there are more.

OT, it's just after 7pm and two more tremors rumbled through town.
We had several good ones this morning. These quakes were cool at
the beginning, but now they are getting really annoying!

(make that 3 jolts tonight!)

Well I would think Aaron would love too,
I know of one over here called the BBC
(British Bankers Club) He could open one
called the FCC.

Very true, but if you are to believe
Aaron, Frank and Leland, you would think
hundreds of CB'rs are getting busted everyday.
I've yet to see one mentioned in the newspaper,
lots of drunk drivers, but never a CB'r.

Yes, thanks for the input SSB. I can look at the properties of messages, but was thinking more in line of who (or what organization) might write such a post in the first place. I'm sure certain entities (if interested) already know exactly whom - right down to the street address. Hey, sounds like things are getting interesting over in ash-can-is-tan.

>Which center-loaded 5' CB antenna has widest bandwidth?>
Try a top-loader. Usually has better
overall performance, same mount.

Hello Dick: Yes indeed the old man would roar over his Rat Tailed File being ground into a smooth shaft. Dear ol Dad being a Contractor and Commercial Fisherman, had a great set of files. But admittedly a few where lost in the dirt, grass, and just plain wore down, by them darn steel chassis. Yes indeed, does that bring back old memories.

The School had a set of the chassie punches, so ya had to drag the chassie to school, try to get it in Electric Shop in the early morning, because it wouldn't go in your locker, with your old copies of the ARRL Handbook, with all the linear amplifiers articles read over and over.

Aluminum was a good thing, yes indeed. Greatly appreciated after the dragging of the chassie thru school and back. And having to file out an extra few inches of diameter because they never had the right sizes, Oh boy. But the thought of having a lethal 20 to 30 watts was well worth all the trouble. Yes indeed.

The local Technician whizz bang was Beep Beep, a technical wonder, and government employee of some sort. Who had many years of experience, and could easily help with Algebra homework, in a snap. Worked for the FCC for all I know. He knew all the rules and told us how they would be inforced, and not inforced, what a guy. He tough us to install a light bulb in series with the power transformer primary winding, and use low wattage to high wattage bulbs to allow the power supply capacitors voltage to slowly be brought up. What a science project. Dad had to make a big deal at the hardware store telling all the guys there about the high voltage power supply in the amp, and needed different wattage bulbs. That was great!

ROFLMAO..... yes you got that right! The old drill motors had to be designed by the communists to mask local defense radar signals. Dad always had one that sparked like there was no tomorrow.

This reminds me of another story, and I'll tell it.

Dear ol Dad had a 3/4 HP Milwaukee Heavy Duty Construction Drill. You would pull the trigger switch, hear the motor take off, and few moments later the chuck would start to turn slowly, having a very large gear reduction allowing way to much torque to be safe, legal, or moral.

Well the big drill had threaded holes (in the body of the drill) to screw in pieces of pipe, I'd say 1 1/4" pipe. The operating instructions showed two men holding the 5 to 6 foot long pieces of pipe screwed in the drill motors body, with a warning of extreme danger and torque, ect ect.

Well the old man being a very large man, with a large barrel chest and in pretty good shape would never use the recommended two men, or additional pipes to hold the monster drill. One day while drilling up thru wall rafters, the large open faced 2 1/2" drill bit catch some nails, and the drill didn't stop any time time fast. But dear old Dad took his first flying lesson, from half way up on a ladder. And a few 2 X 4's boards in the wall where removed from Dads large body wherling around like a top. Picking up ol Dad and cleaning off the blood, torn shirt, and broke to heck 2 x 4's, we adjourned until the next day.

The large gear reduction drill has been loaned out to various people, with the carrying case and the set of operating instructions, that clearly show the proper way / method of 3 men to operate it. But the last brave soul returned the drill with minor injuries, and band aids on the forehead.

A few years ago I sent the drill in to be rebuilt, and have a new cord, and switch installed. It was promptly repaired and returned. But the operating instructions now show hurt people and a very large printed warning paragraph.

It puts out ozone 2.

> To say that disobeying selective laws will cause anarchy,
> man this country should be a Taliban nation by now then.

But that's exactly where it ends up, sharkie. You have this
perception that freebanding is an insignificant violation (for
whatever reason), and because it is insignificant then it's ok
to freeband. But by your argument, it's also ok to take up the
hobby of shooting transients because there will be an insignificant
number of victims, or petty theft because the dollar amount is low,
or even rape because "they really want it". These are all excuses
for criminal behavior, and I'm sure that many serious criminals did
consider their crimes to be 'insignificant' in nature. So where does
it end, sharkie? It doesn't, it just keeps getting worse until
the laws are finally enforced, if at all. And social reinforcement
of these attitudes only makes the tra1n go faster.

Don't believe me? Review your Sociology 101 textbook. You are right,
people will always commit crimes. But that's no excuse for deliberately
ignoring a law that is only too easy to follow. And this criminal
brotherhood thing can only serve to create and reinforce similar
support networks for more serious offenses. You can bet that someone
will say, "Hey, if they can do it, so can we!" I suppose you might
think that's alright as long as you agree that the crime is insignificant,
but what if it isn't? What if the support group defends drunk driving
in San Fransisco?

When are you going to start thinking about these things, sharkie?
Don't you have any kind of community consciousness? Do you hate
society so much that you would promote lawbreaking while ignoring
the direct and indirect consequences to yourself and to others?

>
> Landshark

Wrong. If no one obeyed any laws it would be called anarchy. Luckily the majority of people obey the majority of laws because they realize that obedience to the law serves the common good of their fellow citizens. The people who habitually and intentionally break laws (such as freebanders and amp junkies) are called outlaws, lawbreakers, scofflaws, and criminals. But you know all this. And you also know the theory you have been trying to promote (that CB rules are trivial) is full of huge holes.

>Wrong. If no one obeyed any laws it would be called anarchy. Luckily
>the majority of people obey the majority of laws because they realize
>that obedience to the law serves the common good of their fellow

Wrong. The majority of people obey the majority of laws because
that's their nature. OTOH, why is there no more 55 mph speed limit?
Did something all of a sudden change? No, the majority of people
"violated" that "law" because it was a stupid "law" and was a real
inconvenience. Yeah, I got a ticket, about a month before it was
repealed. So what? I paid the fine. Now the "law" is repealed and
I'm driving the same speed I always was, about 65 mph. So what?

Price would be:
10 tubes at $13 ea - $130
Shippping 8
COD FEE 6

Total $144

Payment would have to be in the form of a money order or in cash when delivered.

IF this acceptable to you, please Email me your shipping address and I will get the tubes on the way on Tuesday (tomorrow)

Thank You,
Richard Hale

Sorry but I have no meter movements for Bird meters...I have NEW Coaxial Dynamics Meters which are as good as Bird meters, they will read both PEP as well as RMS/Average/Bird watts. Plus the size of the meter face is larger than that of the Bird meter therefore easier to read...meters come with a 2 year factory warranty.

news:20011110234538.209$qN@newsreader.com... Then *WHY* do you post it
as your addy..?
--
Because it bugs Twisted since he likes to use that service for posting
forged news group messages, and he doen't like to be reminded about that
fact.

"Oh, man. You are showing our true colors now, but then again alcohol
does lower inhibitions. Nothing you can do bothers me, Nad, but you are
welcome to think otherwise. At least you admit in part here that you are
using your posting privilege to the group as a personal tool to "bug
twisted." You are pitied, Nad, truly."

And if you haven't looked closely it's ABUSE@cotse.net. Just the place
to send the complaints to that gets him busted, and anybody else dumb
enough to try his silly games.

"Yea, that was me attacking myself daily for weeks on end as "dweebo"
demanding proof that Dogie made a threat, huh, Nad? Hehehe...get some
more rest, Lelnad."

So if on September 10, 2001 somebody told you that at least 3 jumbo jets
would be hi-jacked by four men on each plane, and armed with nothing
more than "box cutter knifes", and then intended to crash two of them in
to the world Trade Center towers in New York and the third plane in to
the Pentagon, would you have believed it could REALLY happen? Or would
you just laugh at their face until the morning of September 11, 2001 at
around 9:00 AM? Just think for a minute, those events may never have
happen had this country been a bit more "paranoid" about Terrorist
activities here at home.

Again Aaron, you should live by the laws you
try to make others live by. If a laws there for long
haired hippie biker freaks, then you should be arrested.
You say that breaking any law is criminal, so by
your own definition you are a criminal just as much as
the people you accuse. Look at Frank he is a convicted
criminal (litter bug) in the state of Washington, why do you cohort with
him?

You want Twisted's position as the news group punch clown now? All you
have to do is start claiming you talk to "saucer men" and collect "jock
straps" on the wall. Or failing to criticaly read the sig file too.

"Hehehe! Hey Mopar, he's drunk again! You pointed out something about
him that he doesn't like (self anger causes it). Better heed his
warnings since, you know, he makes good on his threats. Remember when he
said e would get Dogie to porn spam the group if I didn't quit pointing
out (he said "picking on" his errors?"

And as far as my sig file goes it specifically mentions "Twistedhed",

"Um, yea, that's what he was attempting to point out, the ironic part
that you refer to me with all your posts. An alcohol induced stupor I
might understand, but you,"Nad, are drunk with arrogance and ignorance."

not you, nor CBers in general,

"You mean you didn't make the statement "After all, what could they
possibly add, what do expect from cbers?"
Yea, you made it. You said it and you meant it. I just pointed it out."

but that could change if you want to complain about it any more.

"Threats are your forte, we would expect nothing less from the likes of
your challenged self."

  I wonder what I could think up using "Moparholic"? Hum, seems to
rime

"What are you drinking, Nad?"

with "Alcoholic", I'm sure I'll think up something good. Since Twisted
likes to waste so much of his time looking for old posts of mine, and
others, to resurrect, for purposes which seems to elude even him, I
though I would give him something fun to read when he finds them.

"No problem, 'Nad. Anytime an old post will serve to enlighten newbies
not familiar with your ignorant, jealous, arrogant, erroneous conduct, I
will be certain to point it out. Have a gooder. "

news:20011111000125.830$R8@newsreader.com... Yea,it goes'unreported' on
11 meters,beacuse Riley is way yonder too busy, policing you ham fucks
--.
Thats where Riley has started, he is a ham operator and put most of his
efforts in the amatuer bands with hams it is usually easier to catch
violators, since everyone must ID with a valid callsign, and the rest of
the ham community usual helps locating and finding rule breakers hence
"self policing". So with that in mind enforcement occurs in the ham
bands somewhat easier and more regular. CB complaints usually occur when
someone is interfering with a neighbor etc.. and this person lodges a
complaint. Only now this makes the illegal cb operator known to the FCC
and they then can be investigated, otherwise the FCC is not going to be
doing any randoms stops in regards to cb enforcement. Maybe things will
change but as of now it is sporadic enforcement on 11 meters.
--
"Lelnad KC8LDO doesn't believe you. He claims to have a very close
friend who is a lawyer with the FCC and says he can prove this wrong,
but you must confirm it in the exact manner he specifies by going to a
hammie room and being told so since no media have ever confirmed it.
Apparently the 'Nad boy believes that if a hammie says it, it makes it
so, regardless of what FCC reports show. ALL actions taken against cbers
or hammies are public information despite what another had claimed, and
readily available except in special circumstances where a judge must be
petitioned and shown good reason why an action should be kept from
public records."

CC: John Anderson, President
Eugene Trucking Haven, Inc.
800 Willamette Street, Suite 800
Eugene, Oregon 97401
RE: Cases EB-01-PO-188
Gentlemen:
This is an official Citation issued pursuant to Section 503(b)(5) of the Communications Act of 1934, as amended (the Act). On July 23, 2001, agents from the Federal Communications Commission Portland Resident Agent Office observed that the following uncertified Citizens Band (CB) radios were displayed and offered for sale inside TRUCK-N-TRAVEL store located at 32910 East Pearl Street, Coburg, Oregon 97408:
1) Galaxy DX99V $439.99
2) Galaxy DX88 $399.95
3) Galaxy DX66 $280.00
4) Galaxy DX33HML $239.80
5) Delta Force $200.00
The Commission's records show that the above CB radios have not been granted an FCC equipment authorization. You are hereby warned that the marketing of those CB radios, including advertising, is a violation of Sections 2.803, and 15.101 of the Commission's Rules and may violate Sections 2.925 and 2.926 of the Commission's Rules. 47 C.F.R. Sections 2.803, 2.925, 2.926 and 15.101. Violation of the Commission's Rules is punishable under Section 503(b)(2)(C) of the Act by a monetary forfeiture of up to $10,000 for each violation per day, up to a maximum of $82,500.
Further investigation revealed that TRUCK-N-TRAVEL is registered with the Oregon Corporations Division as Eugene Trucking Haven, Inc., 800 Willamette Street, Suite 800, Eugene, Oregon 97401. In accordance with Section 503(b)(5) of the Act, you are being given a period of 14 days from the date you receive this Citation to submit any statements you wish to make concerning the violation. In addition, you may request an interview to discuss this matter in person at the nearest Commission's office.
The Privacy Act of 1974, P.L. 93-579, December 31, 1974, 5 U.S.C.

552a(e)(3) requires that we advise you that the Commission's staff will use all relevant material information before it, including the information disclosed in your reply or interview to determine what, if any, enforcement action is required to ensure current and future rule compliance.
The knowing and willful making of any false statement in reply to this notice is punishable by fine or imprisonment under Title 18, United States Code, Section 1001.
Sincerely,
Binh Nguyen
Resident Agent, Portland (Oregon)
Note: The FCC advises that some of the five models of CB transceivers listed above were capable of operating on 10 meters.
-
Well, it's a start. Even if it is just a warning letter. Take care and 73.
Mark
-
  It's more of the same..business as usual. Nothing has changed, same old routine by the FCC. Has anyone compiled statistics lately? Check out the enforcement actions taken by the feds this year and compare them with last year at the same time......

5016. Re: 6146 usage

Newsgroup: rec.radio.cb
Date: 2001-11-12 15:37:49 UTC
From: twistedhed@webtv.net
Message-ID: <20286-3BEFECCD-307@storefull-126.iap.bryant.webtv.net>
Source record: 104029

From: dumpjunkmailhere@yahoo.com (Casino) The 6146 was introduced by RCA in 1951, as a replacement for the 2E26 transmitting tube. It allowed you to crank-up the output of a transmitter (one using a 2E26 of course) without any modifications; you simply remove the 2E26 and plug-in a 6146! The 6146 could be used in the 2 meter (144 MHz) and 220 MHz VHF bands with reduced output. In the '50's and 60's, it was also used as finals in hi-fi audio amps, PA systems, and guitar amps. The hi-fi version of the 6146, the 6550 (a.k.a. KT88), was later introduced for safety reasons (dangerous plate cap on the 6146) and is quite popular in hi-fi today. The 6550 is also used as a transmitting tube, though not as popular as the 6146. I have seen both 6550's and 6146's in illegally built radio jammers and CB radios.
--
The 6146 was a very popular final output tube used for low band VHF service (30 - 50 MHz) commercial radio units (Prog Line?) from General Electric (GE). The RF section was one of the most solid designs from the period. Of course, they were selling it to the local and state law enforcement agencies. The only problem was heat. Today, small reliable fans, Teflon wiring and modern capacitors can be easily address and handle this issue.
Now you have me thinking about a winter project. greg
--
"Now, don't you think it just a tad pathetic that you can't even add decent commentary like you did above without lowering and reducing yourself to your google names simply because you destroyed your original ng nic with useless junk? But of course you must conceal your identity, else speaking of amplifiers would again confirm your hypocritical, scabby ways."

news:19569-3BEA9329-32@storefull-125.iap.bryant.webtv.net... "You mean
your arguments...they aren't mine,

You have the name of a contact who can either confirm or deny any and
all of your dumb arguments,

"In the first place, I didn't ask for a "contact" to orally confirm what
you claim. One more time, I asked for a single, credible media link
confirming it which you have failed to produce. Here you are beside
yourself wanting me to go to a hammie room again."

and you don't have the nerve to even send him one lousy E-mail or post
one simple message. Just hop over to the "rec.amateur.policy" news
group, and leave a message for "Phil Kane (K2ASP)". He worked for the
FCC, and did his share of FCC busts for Part 95 violations. So prove
that my opinion, and several others on this group, are wrong Twisted.

"An opinion is neither wrong nor right and if it was simply an opinion,
I wouldn't denounce it. You espousing the happy horsepuck about feds
busting cbers for interupting emergency ops., simply freebanding and dx
talkin' is nothing more than something for you to take issue with and
bang a gong."

I figured you would be foaming at the month to show me up as being
wrong, in stead it looks like you lost your nerve and all of your
creditability.

"Who do you think you are kidding? You obviously calmed down a bit since
our last encounter. If you wish, I would be very happy to post the
exchanges we have had on this subject so we could see just who it was
that was "foaming at the month (SIC)". Your concern with my
"creditability" (SIC) always appears to lead to your losing face. What I
find simply astounding is the sheer number of posts you devote to me
each and every weekend and I'm not even present...How the hell can you
deny I don't dominate your thoughts? It's truly a sad state of affairs

when your weekends are spent combing the group pouring over my posts and replying to them, using the group as a tool of your personal anger and shortcomings to take jabs at me...oh well, as I said before, if it brings a smile to your dank angry world, glad that I can shine some light in your cave of discontent."

news:<TSSG7.24143$yf4.4272317488@newssvr21.news.prodigy.com>...
        There has been crime for hundreds of years in
the USA, murders, rapes, drunk drivers, theft, burglary, robbery etc etc
To say that disobeying selective laws will cause anarchy, man this
country should be a Taliban nation by now then.
--
But that's exactly where it ends up, sharkie. You have this perception
that freebanding is an insignificant violation (for whatever reason),
and because it is insignificant then it's ok to freeband. But by your
argument, it's also ok to take up the hobby of shooting transients
because there will be an insignificant number of victims,

"No that would be YOUR perception."

or petty theft because the dollar amount is low,

"Again, YOUR perception."

or even rape because "they really want it".

"Now THAT shows just where your line of thought is. Despicable. The ONLY
people that compare cb to these disgusting acts are you and your 3
dogs."

These are all excuses for criminal behavior,

"And only brought up by the Kennel Club, which you seem to vigorously
embrace."

and I'm sure that many serious criminals did consider their crimes to be
'insignificant' in nature.

"Ya' know, you being "sure" how criminals think is no surprise."

So where does it end, sharkie? It doesn't, it just keeps getting worse
until the laws are finally enforced, if at all.

"Many of us don't look at it as getting worse. Just the opposite, life
gets better all the time, including my time spent on radio."

And social reinforcement of these attitudes only makes the tra1n go
faster.

"So you have a problem with anyone elses view of what is "socially
acceptable" if it doesn't meet with your approval. We know."

Don't believe me? Review your Sociology 101 textbook. You are right, people will always commit crimes. But that's no excuse for deliberately ignoring a law that is only too easy to follow.

"Redundant. You are repeating an offense that only the kennel club commits. It is you that compares the act of noncompliance with part 95 with violence."

And this criminal brotherhood thing can only serve to create and reinforce similar support networks for more serious offenses.
You can bet

"This HAS to have come from Miss Cleo, judging by the number of times you reference her."

that someone will say, "Hey, if they can do it, so can we!" I suppose you might think that's alright as long as you agree that the crime is insignificant, but what if it isn't? What if the support group defends drunk driving in San Fransisco?

"Only idle minds and mundane thinkers with too much time on their hands sit around thinking "what if?"

When are you going to start thinking about these things, sharkie? Don't you have any kind of community consciousness? Do you hate society so much that you would promote lawbreaking while ignoring the direct and indirect consequences to yourself and to others?

"The consequences aren't being ignored. They are being challenged head on by defiance and losing in a large manner. You know it, I know it, and the rest of the radio world knows it. You sad few in here screaming accusations of criminal acts, hurling insults left and right, professing false enforcement with propaganda that isn't even SLIGHTLY believable serves nothing."

> base.Just wanted to know if There are still people using the cb radio or is it
> kinda dying out.Thanks
> Gregory.

Hi Gregory,

Sure, there are plenty of folks using CB radios and for a multitude of reasons. The Cobra 139XLR was a fine base unit and should still be, as long as she wasn't abused. Get a good alignment and you'll be ready to rejoin the masses. Be aware that you may run into an unpleasant element here and there, but don't let them discourage you. The "citizen's" band is just that, yours AND mine. To throw your hands up and abandon CB is just letting them win.

It's certainly not the old "good buddy" days of yesteryear. On the AM side you might find some locals ragchewing or some of the extremely high powered stations "competing" for wattage bragging rights. The channels 4 and 36 through 40 are usually used by sideband enthusiasts. While you may find some folks ragchewing, you'll likely encounter DXers talking across the country or, in some cases, throughout the world. Whether or not you participate is a personal choice, however, be advised that the FCC has a 155.3 mi. limit on CB.

All in all, I'd encourage you to give it a go, the more nice operators there are, the better. Take it easy.

Hi Bill,

I have to say, I never took much of a liking to the LT. Does it use
the same chassis as the XL? What aspect do you find preferable? Who
knows, maybe I'll pick one up for safekeeping. :-)

I'm not "making you live by any laws" you drug-addled cretin. I'm
just disagreeing with your outlaw CB lifestyle.

> If a laws there for long
> haired hippie biker freaks, then you should be arrested.

Who's talking about hippie bikers? Where did that come from?

> You say that breaking any law is criminal, so by
> your own definition you are a criminal just as much as

> criminal (litter bug) in the state of Washington, why do
> you cohort with him?

The word is "consort", not cohort.

What happened to you Shark?

You used to post like a semi-intelligent fellow. Lately your posts
sound like those of a drugged-up street person. Your argument that
"there are so many laws we can't possibly obey them all" is silly and
ignorant.

> Wrong. The majority of people obey the majority of laws because
> that's their nature....

Wrong. The majority of people obey the majority of laws because
the consequences are inconvenient at best, and downright nasty
for the more serious crimes. The difference is in the people: some
only consider the direct consequences to themselves, like fines
and jail time. Other people are not so self-centered, and are able
to see how a violation may affect the community as a whole.

So it goes with RF piracy. They think that the only ones that are
affected by their activities are themselves, not realizing that
by simply engaging in the activity publically encourages others
to do the same. As the violations become more widespread the
carelessness also increases -- the signals get dirtier, the freqs
expand into other bands, and the amps get too large for practical
use. That's what's happening, and it will only get worse.

5039. 1977 FCC study on TVI

Newsgroup: rec.radio.cb
Date: 2001-11-12 20:26:21 UTC
From: fgillil@tincan.org
Message-ID: <e182e02.0111121226.2c5b27c1@posting.google.com>
Source record: 104052

"The Extent and Nature of Television Reception Difficulties Associated with CB Radio Transmission" found that 85% of all the cases of TVI in 1976 were caused by CB radios, and 45% of those CBers were running linear amps with an average power of 120 watts. 55% of the CB-related TVI cases were attributable to "inadequate suppression of transmitter harmonics". The info gained from the study was used to estimate that 4,000,000 people experienced TVI from an estimated 22,000 CB stations. The study does not address other RFI issues.

Remember that this was in 1976, when CBs were just beginning to get popular!

Are you getting a whine or popping sounds?

If its a whine then its the alternator and you need to filter the dc power line. If its popping then its the ignition system. Does your midland have a noise blanker and/or ANL on it. If it does try turning them on. If not, perhaps you should purchase a radio that has these functions. A regular mobile rig usually has these functions and has dc power line filtering built into it.

Where is your antenna located?

Try to keep the antenna as far away as possible from the engine.

That would make sense that fiberglass whips are shorter than steel whips because of the dielectric constant of fiberglass is greater. However, they are both 1/4 wavelength antennas but I would give the steel whip the edge on durability and power handling capacity.

5054. Re: FCC Busting Truck Stops For "Exports"

Newsgroup: rec.radio.cb
Date: 2001-11-12 23:46:16 UTC
From: phineas@engineer.com
Message-ID: <a031bae8.0111121546.4d2d69c5@posting.google.com>
Source record: 104067

I would turn them in too for selling those radios at those prices. 1 down, and hundreds to go.

One thing that gets me is all of the stone throwing, and by Tech Class HAMS. You know, I can deal better if old timers were b*tchin and moaning about enforcement, but Techs? Heck, the old foggie HAMS dont like you either...lol

What about the multitude of other complaints in the enforcement letters about HAMS interfering with CB, or talking on Freeband. I see alot more of those than I even see enforcement letters sent out to bootleg stations.

I also notice you holly TECHS posting your views in a news group. You give truckers and CBers alot of credit. Most trucker I know dont even have a computer, nor do they know anything about USENET if they do have a computer. But who is buying these radios from a truck stop? Truckers. I met a trucker that could tell you anything about tuning a motor, but it took him a week to figure out how to get back to channel 19 on his export radio.

Who makes these radios? HAMS Who makes tha AMPS? HAMS Who uses this equipment? HAMS Who publishes the illegal mods to get radios to operate on 11 meter? HAMS

Do you smell HAM? Sounds like a lot of HAMS making some big cash to me. I say bust them. Stop the supply of cheap illegal radio equipment, you will stop its usage. But that will never happen, cause that would throw the Freeband back to who?.....the HAMS.....Do you smell HAM again? It would also make 11 meter freeband pretty easy to enforce, since they would be the only ones with the know how to build or mod such a radio.(Other than an Engineer). Another reason this would never happen, cause the old HAM that makes his living making and selling these radios would suffer. Amateur radio is nothing but a club managed by the government. Hell of a combination, but really makes enforcement into a double standard.

I frankly think that coming on here trying to scare people with this FCC crap is a waste of everyones time. If you really want to make a difference, for starters, target the people who are getting busted the most, then work your way down. Or better yet, take the time and target the people who are directly ruining you personal fun. Frankly, as long as I can hit the repeater, I could give a flying sh*t.

Phineas

You have the name of a contact who can either confirm or deny any and
all of your dumb arguments,

>"In the first place, I didn't ask for a "contact" to orally confirm what
>you claim.

What's so "orally" about sending a simple E-mail or news group message? The term ""orally" has something to do with the mouth the last time I checked the dictionary, not with the fingers. So you forgot how to type or something? You have wasted more time ducking - dodging - and evading the issue than it would have taken you to type out a simple message to him Twisted. Besides the argument is yours, not mine, concerning the issue of operating on the Freeband doesn't hurt anybody. You wasted a lot of time debating the point with several others, and never could prove your point. But Jerry Oxendine did prove his with his first hand experience.

So what's the matter Twisted? You have the golden opportunity to get the straight scope right from a bona-fide FCC employee "Phil Kane (K2ASP)" to support (hopefully) your position, and you chicken out at the very first chance you get. Heck the guy even has his ARRL E-mail address listed on QRZ - k2asp@arrl.net. I looked it up for you so you don't have to make up an excuse that your WebTV service doesn't work well on the QRZ site, of course we know that's not true from all the times you looked me up. I know your E-mail works just fine judging from the recent rash of forged messages too.

> One more time, I asked for a single, credible media link
>confirming it which you have failed to produce. Here you are beside
>yourself wanting me to go to a hammie room again."

Most of use already know from first hand experince about what goes on, and Jerry just confirmed it. So far Twisted it's 1 to zip and not in the pirate CBer's favor either. So are you just going to stand there wearing your "Depends" while you watch the strikes being pitched against you? Or are you going to at least make an effort to swing at it by sending that message to Phil Kane?

Get a real mobile radio with an ANL circuit in it. While the ANL
won't eliminate the problem, it reduces the noise a lot.

Hello Scott: Beeb Beeb was kind of a behind the lines type of guy, that showed all us kids all kind of neat things. Not on the radio a lot, but would get on to say hello ect. He loosened up a bit after a few Whiskeys at the Breaks.

Beeb Beeb would always be there at a antenna raising party, and post antenna raising party beer guzzeling contests, and lie telling. He would break in if some one was having radio problems, and offer advice, or just invite them over to his house to repair the guys radio. A really neat guy.

"Click Click" mostly hung out on channel 15 AM and he was a real character!

"Click Click" would get all tanked up and yell, while the mic was keyed: "Ma if are ya fellin all lovey dovey, for you knows what!" Very funny, the channel was quit while behind the mic with laughter.

"Click Click" Ran a Johnson Viking Ranger, with one the large amps, and had a 5/8 ground plane antenna really up there. He lived in Bell Gardens, Southern California. He came to all the local CB Breaks and was a real card. He always came up to the breaks with Geety Up & Go, a full time beer drinker.

"Click Click" would always say that "I didn't go to work today, or the day before, or the day before, or the day before, or the day before ....

Being on channel 15 AM there was always a lot of truckers who used the channel also. "Click Click" would always yell out that you's kan't talk on channel 15 unless you got a gallon of diesel fuel. After saying this for a hour or so, the next thing you hear is "Click Click" audio sounding like its in a large container with a lot of liquid. Then you hear "Click Click" guzzeling this liquid, and then very shortly he starts to slur his words and starts singing the Nation Anthem, and shortly after that, silence. What a show, better than 147.435 MHz repeater, or live TV.

"Click Click" would all ways talk with Bandeny and Grandma.

You didn't need to talk to "Click Click", just listening was a entertaining pleasure.

You know this is an interesting theory:
You don't have to read it if you don't
want to. Correct, you don't, but on the other
hand if you post something to my dislikes, I
have no way of knowing until I have opened
it and started reading it. Worse if I have kill filed
them and have no way of knowing it's a post
from them, because they are changing there
nic just to bye pass newsgroup readers filters.
That is what I would call as forcing someone to
see their post, by bye passing filters.
Lets see, someone didn't like a certain
person views on here and they tried to have them
fired for using the newsgroup through company
servers, do you think that is fair?

Actually no, you imply that people that use amps or freeband
are law breakers, and people the purposely break laws are

criminals. So if you look at all these laws you are just as much of a law breaker as the people you accuse.

Your own words, laws are not meant to be broken, when the AKC break them they are criminals.

Please continue on the path of accusations of drug abuse, you only prove your wrong by switching subjects and accusations.

PB,
Yes to both of your suggestions. Unfortunately, you'll probably
still have some noise. Most 'HT's just aren't shielded too well. A DC line
filter might help, you can find them nost places that sell electronic parts
or radios. Good luck.

Looking to deal my Radio Shack HTX-242 2m mobile for a 10m SSB mobile such
as
the Titan or similar. Radio is in great shape, I just don't care for 2m in
the car anymore.

Let me know what you have.

73,

Max ve3tmt@rac.ca

I have no idea what you are talking about. Neither does anyone else.

>Actually no, you imply that people that use amps or freeband
>are law breakers,

Well Sharky (or whatever your name is) they are law breakers. *I*
didn't make these laws up. The FCC has rules (See below) which have
the power of federal law. When broken, they have consequences. The
FCC is the one you should direct your anger at, not me.

>and people the purposely break laws are
>criminals.

OK. For the purposes of argument, what would YOU call people who break
laws?

>So if you look at all these laws you are just as much of a law
breaker as the >people you accuse.

Sorry, you lost me again. Logical disconnect?

> Your own words, laws are not meant to be broken, when the AKC break them >they are
criminals.

Sharky (or whatever your real name is) all you are doing is attempting
to justify your habitual and intentional breaking of FCC rules. And
it's just not working. Hang it up.

-Aaron-

--

Federal Communications Commission (FCC)

Part 95 - Subpart D - Rules for CB Service
Citizens Band (CB) Radio Service

General Provisions-

[RULE 1] Description
[RULE 2] Usage of Rules
[RULE 3] Who is Eligible
[RULE 4] Licenses
[RULE 5] Areas Of Legal Operation

[RULE 6] Special Restrictions
[RULE 7] Operating Channels/Frequencies
[RULE 8] Antenna Height
[RULE 9] Equipment
[RULE 10] Power Output
[RULE 11] Linear Amplifiers
[RULE 12] Permitted Communication
[RULE 13] Illegal Communication
[RULE 14] Paying for Actual Use
[RULE 15] Who Is Held Accountable
[RULE 16] Time Limit of Transmissions
[RULE 17] Identification Methods
[RULE 18] Emergency Usage and Assisting Travelers
[RULE 19] Remote Control Operations
[RULE 20] Telephone Patches and Telephony with CB
[RULE 21] Penalties
[RULE 22] Correspondence from FCC
[RULE 23] Notice of Interference
[RULE 24] Service to Transmitters and Antennas
[RULE 25] Modifications to Transmitters
[RULE 26] FCC Inspections
[RULE 27] Keeping Station Records
[RULE 28] Contacting the FCC

RULE 1 - Descriptions The Citizens Band Radio Service (CB) is a private, two-way, short-distance voice communications service for personal or business activities. The CB Radio Service may also be used for voice paging.
RULE 2 - Usage of Rules You must comply with these rules when you operate a station in the CB Service from:
{1} Within or over the territorial limits of places where radio services are regulated by the FCC.
{2} Aboard any vessel or aircraft registered in the United States or
{3} Aboard any unregistered vessel or aircraft owned or operated by a United States citizen or company.
Your CB must comply with Part 95/Subpart E [Technical Rules].
Where the rules use the word "you", "you" means a person operating a CB station. Where the rules use the word "person" the rules are concerned with an individual, a corporation, a partnership, an association, a joint stock company, a trust, a state, territorial or local government unit, or other legal entity. Where the rules use the term "CB station", that means a radio station transmitting in the CB Radio Service.
RULE 3 - Eligibility To Use CB You are authorized to operate a CB station unless:
{A} You are a foreign government, a representative of a foreign government, or a federal government agency.
or
{B} The FCC has issued a cease and desist order to you, and the order is still in effect.

RULE 4 - Licenses You do not need an individual license to operate a CB station. You are authorized by this rule to operate your CB station in accordance with the rules stated in this Subpart. (*also read Rule 17)
RULE 5 - Areas of Legal Operation You are authorized to operate your CB station from:
{A} Within or over any area of the world where radio services are regulated by the FCC. Those areas are:
[1] The 50 United States
[2] The District Of Columbia
[3] Commonwealth of Puerto Rico
[4] Navassa Island
[5] United States Virgin Islands, it's 50 islets and cays
[6] American Samoa
[7] Baker Island
[8] Commonwealth of Northern Mariana Islands
[9] Guam Island
[10] Howland Island
[11] Jarvis Islan
[12] Johnston Island
[13] Kingman Reef
[14] Midway Island
[15] Palmyra Island, and it's 50+ islets
[16] Wake Island
{B} Any area of the world, except, within the territorial limits of areas where radio services are regulated by -
[1] An agency of the United States other than the FCC, you are subject to it's rules.
[2] Any foreign government, you are subject to it's rules.
{C} An aircraft or ship, with the permission of the captain, within or over any area of the world where radio services are regulated by the FCC or upon or over international waters. You must operate your CB station according to any applicable treaty to which the United States is a party.
RULE 6 - Special Restrictions
{A} If your CB station is located on premises controlled by the Department of Defense you may be required to comply with additional regulations imposed by the commanding officer of the installation.
{B} If your CB station will be constructed on land of environmental or historical importance (such as a location significant in American history, architecture or culture), you may be required to provide information to comply with Part 1.1305 through 1.1319 of the FCC Rules.
RULE 7 - Operating Channels/Frequencies Your CB station may transmit only on the following channels / frequencies:
Channel Frequency Channel Frequency
1 26.965 21 27.215
2 26.975 22 27.225
3 26.985 23 27.255
4 27.005 24 27.235

5 27.015 25 27.245
6 27.025 26 27.265
7 27.035 27 27.275
8 27.055 28 27.285
9* 27.065 29 27.295
10 27.075 30 27.305
11 27.085 31 27.315
12 27.105 32 27.325
13 27.115 33 27.335
14 27.125 34 27.345
15 27.135 35 27.355
16 27.155 36 27.365
17 27.165 37 27.375
18 27.175 38 27.385
19 27.185 39 27.395
20 27.205 40 27.405

{B} * Channel 9 may be used ONLY for emergency communications OR for traveler assistance.
{C} You must, at all times and on ALL channels, give priority to emergency communication messages concerning the immediate safety of life or the immediate protection of property.
{D} You may use ANY channel for emergency communications or for traveler assistance.
{E} You must share each channel with other users.
{F} The FCC will not assign any channel for the private or exclusive use of any particular CB station or group of stations.
{G} The FCC will not assign any channel for the private or exclusive use of CB stations transmitting single sideband or AM.
RULE 8 - Antenna Height
{A} "Antenna" means the radiating system (for transmitting, receiving or both) and the structure holding it up (tower, pole or mast). It also means everything else attached to the radiating system and the structure.
{B} If your antenna is mounted on a hand-held portable unit, none of the following limitations apply;
{C} If your antenna is installed at a fixed location (whether receiving, transmitting or both) it must comply with EITHER one of the following:
[1] The highest point must not be more than 20 feet (6.10 meters) higher than the highest point of the building or tree on which it is mounted;
or
[2] The highest point must not be more than 60 feet (18.3 meters) above the ground.
{D} If your CB station is located near an airport, and if your antenna structure is more than 20 feet (6.10 meters) high, you may have to obey additional restrictions. The highest point of your antenna must not exceed 39.37 inches (1 meter) above the airport elevation for every 109.36 yards (100 meters, 1 hectometer) of distance from the

nearest point of the nearest airport runway. Differences in ground elevation between your antenna and the airport runway may complicate this formula. If your CB station is near an airport, you may contact the nearest FCC field office for a worksheet to help you figure the maximum allowable height for your antenna.
WARNING: Installation and removal of CB station antennas near powerlines is dangerous. For your safety follow the installation directions included with your antenna.
RULE 9 - Equipment
{A} You must use an FCC type accepted CB transmitter at your CB station. You can identify an FCC type accepted transmitter by the 'type acceptance'label placed on it by the manufacturer. You may examine a list of type-accepted equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter which is not FCC type-accepted voids your authority to operate the station.
{B} You must not make, or have made, any internal modifications to a type-accepted CB transmitter. (*read Rule 25) Any internal modification to a type-accepted CB transmitter cancels the type-acceptance, and use of such a transmitter voids your authority to operate the station.
RULE 10 - Power Output
{A} Your CB station transmitter power output must not exceed the following values under any conditions:
AM [Amplitude Modulation] - 4 watts carrier power [CP]
SSB [Single Side-Band] - 12 watts peak envelope power [PEP]
{B} If you need more information about the power rule, see Part 95/ Subpart E.
{C} Use of a transmitter which has carrier [CP] or peak envelope power [PEP]in excess of that authorized voids your authority to operate the station.
RULE 11 - Linear Amplifiers
{A} You may not attach the following items (power amplifiers) to your type-accepted CB transmitter in any way:
[1] External radio frequency [RF] power amplifiers, also called linear amplifiers, or linears;
or
[2] Any other devices which, when used with a radio transmitter as a signal source, are capable of amplifying the signal.
{B} There are no exceptions to this rule and use of a power amplifier voids your authority to operate the station.
{C} The FCC will presume you have used a linear or other external [RF] power amplifier if-
[1] It is in your possession or on your premises; and
[2] There is OTHER EVIDENCE that you have operated your CB station with more power than allowed by CB Rule 10.
{D} Paragraph C above in this section does not apply if you hold a license in another radio service (HAM, etc.) which allows you to operate an external RF power amplifier.
RULE 12 - Permitted Communications {A} You may use your CB station to transmit two-way plain language communications. Two-way plain language

communications are communications without codes or coded messages. Operating signals such as "ten codes" (10-4, etc.) are not considered codes or coded messages. You may transmit two-way plain language communications only to other CB stations, to units of your own CB station, or to authorized government stations on CB frequencies about-
[1] Your personal or business activities, or those of members of your immediate family living in your household;
[2] Emergencies;
[3] Traveler assistance;
[4] Civil Defense activities in connection with official tests or drills conducted by, or actual emergencies announced by, the Civil Defense Agency with authority over the area in which your station is located.
{B} You may use your CB station to transmit a TONE SIGNAL only when the signal is used to make contact, or to continue communications (Examples: tone operated squelch, selective calling circuits). If the signal is an audible tone, it must last no longer than 15 seconds at one time. If the signal is a subaudible tone, it may be transmitted continuously only as long as you are talking.
{C} You may use your CB station to transmit one-way communications (messages not intended for two or more CB stations) only for emergency communications, traveler assistance, brief tests (radio checks) or voice paging.
RULE 13 - Illegal Communications {A} You must NOT use a CB station-
[1] in connection with activity which is against federal, state or local law;
[2] to transmit obscene, indecent or profane words, language or meaning;
[3] to interfere intentionally with the communications of another CB station;
[4] to transmit one-way communications, EXCEPT for emergency communications, traveler assistance, brief tests (radio checks) or voice paging;
[5] to advertise or solicit the sale of any goods or services;
[6] to transmit music, whistling, sound effects or any material to amuse or entertain;
[7] to transmit any sound effect solely to attract attention;
[8] to transmit the word "MAYDAY" or use any other international distress signal, EXCEPT when your station is located in a ship, aircraft or other vehicle which is threatened with GRAVE AND IMMINENT danger and you are requesting IMMEDIATE assistance.
[9] to communicate with, or ATTEMPT to communicate with, any CB station more than 155.3 miles (250 kilometers) away;
[10] to advertise a political candidate or political campaign (You may use your CB radio for the business or organizational aspects of a campaign, if you follow all other applicable rules);
[11] to communicate with stations in other countries, except stations in Canada (on General Radio Service).
[12] to transmit a false or deceptive communication.
{B} You must not use a CB station to transmit communications intended

for live or delayed rebroadcast on radio or television. You may use your CB station to gather news items or to prepare programs.
RULE 14 - Paying for Actual Use {A} You may not accept direct or indirect payment for transmitting with a CB station.
{B} You may use a CB station to help you provide a service, and be paid for that service, as long as you are paid only for the service and not for the actual use of the CB station.
RULE 15 - Who Is Held Accountable You are responsible for all communications which are made BY YOU from a CB station.
RULE 16 - Time Limit of Transmissions {A} You must limit your CB communications to the minimum practical time.
{B} If you are communicating with another CB station or stations, you, and the stations communicating with you, must limit each of your conversations to no more than five (5) continuous minutes.
{C} At the end of your conversation, you, and the stations communicating with you, must not transmit again for at least one minute.
RULE 17 - Identification Methods {A} You need NOT identify your CB communications...
{B} You are ENCOURAGED to identify your CB communications by any of the following means:
[1] Previously assigned FCC CB call sign
[2] K prefix followed by operators initials and residence zip code
[3] Your name;
or
[4] Description of your organization including name and any applicable operator unit number
{C} You are encouraged to use a "handle" (nickname) ONLY IN CONJUNCTION WITH the methods of identification listed above in paragraph B of this section.
RULE 18 - Emergency Usage and Assisting Travelers {A} You must at all times and on all channels, give priority to emergency communications.
{B} When you are directly participating in emergency communications, you do not have to comply with Rule 16 about length of transmissions. You must obey all other rules.
{C} You may use your CB station for communications necessary to assist a traveler to REACH A DESTINATION or to RECEIVE NECESSARY SERVICES. When you are using your CB station to assist a traveler, you do not have to obey Rule 16 about the length of transmissions. You must obey all other rules.
RULE 19 - Remote Control Operations {A} You MAY NOT operate a CB station transmitter by RADIO remote control.
{B} You MAY operate a CB transmitter by WIRELINE remote control IF you obtain specific approval in writing from the FCC. To obtain FCC approval you must show why you need to operate your station by wireline remote control. Send your request and justification to: FCC, Gettysburg, PA 17325.
If you receive FCC approval, you must keep the approval as part of your station records (read Rule 27 on station records).
RULE 20 - Telephone Patches and Telephony with CB {A} You MAY connect

your CB station transmitter to a telephone if you comply with ALL of the following:
[1] You or someone else must be present at your CB station and MUST-
(i) manually make the connection (the connection cannot be made by remote control);
(ii) supervise the operation of the transmitter during the connection;
(iii) listen to each communication during the connection; and
(iv) stop all communications if there are operations in violation of these rules.
[2] Each communication during the telephone connection must comply with all of these rules.
[3] You must obey any restriction that the telephone company places on the connection of a CB transmitter to a telephone.
{B} The CB transmitter you connect to a telephone must not be shared with any other CB station.
{C} If you connect your CB transmitter to a telephone, you must use a phone patch device which has been registered with the FCC.
RULE 21 - Penalties may not be current penalty information. {A} If the FCC finds that you have WILLFULLY or REPEATEDLY violated the Communications Act or FCC Rules, you may have to pay as much as $2,000 for each violation, up to a total of $5,000.
{B} If the FCC finds that you have violated any section of the Communications Act or FCC Rules, you may be ordered to stop whatever action caused the violation.
{C} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any FCC Rule, you may be fined up to $500 for each day you committed the violation.
{D} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any provision of the Communications Act, you may be fined up to $10,000 or may be imprisoned for one year, or both.
RULE 22 - Correspondence from FCC {A} If it appears to the FCC that you have violated the Communications Act or these rules, the FCC may send you a discrepancy notice.
{B} Within the time period stated in the notice, you must answer with:
[1] A complete written statement about the apparent discrepancy;
[2] A complete written statement about any action you have taken to correct the apparent violation and to prevent it from happening again; and
[3] The name of the person operating at the time of the apparent violation.
{C} If the FCC sends you a letter asking you questions about your CB radio station or its operation, you must answer each of the questions with a complete written statement within the time period stated in the letter.
{D} You must not shorten your answer by references to other communications or notices.
{E} You must send your answer to the FCC office which sent you the notice.
{F} You must keep a copy of your answer in your station records.
RULE 23 - Notice of Interference {A} If the FCC tells you that your CB

station is causing interference due to technical reasons, you must follow all instructions in the official FCC notice (This notice may require you to have technical adjustments made to your equipment).
{B} You must comply with any restricted hours of CB station operation which may be included in the official notice.

RULE 24 - Service to Transmitters and Antennas {A} You may adjust an antenna to your CB transmitter and you may make radio checks (One-way transmissions for a short time in order to test the transmitter).
{B} Each internal repair and each internal adjustment to your FCC type-accepted CB transmitter must be made BY or under the DIRECT SUPERVISION of a person licensed by the FCC as a GENERAL RADIOTELEPHONE OPERATOR.
{C} Except as provided in paragraph D below in this section, each internal repair and each internal adjustment of a CB transmitter in which signals are transmitted must be made using a NON-RADIATING antenna (Dummy Load).
{D} Brief test signals (signals not longer than one minute during any five minute period) using a radiating antenna may be transmitted in order to:
[1] adjust an antenna to a transmitter;
[2] detect or measure radiation of energy other than the intended signal;
or
[3] tune a receiver to your CB transmitter.
RULE 25 - Modifications to Transmitters {A} You must not make or have any one else make any internal modification to your CB transmitter.
{B} Internal modification does NOT include:
[1] Repair, or servicing of a CB station transmitter; or
[2] Changing plug-in modules which were type-accepted as part of your CB transmitter
{C} You must not operate a CB transmitter which has been modified by anyone in any way, including modification to operate on unauthorized frequencies or with illegal power.
RULE 26 - FCC Inspections {A} If an authorized FCC representative requests to inspect your CB station, you must make your CB station and records available for inspection.
{B} A CB station includes all of the radio equipment you use.
RULE 27 - Keeping Station Records Your station records include the following documents, as applicable: [1] A copy of each response to an FCC violation notice or an FCC letter.
[2] Each written permission received from the FCC.
RULE 28 - Contacting the FCC {A} Write to your nearest FCC Field Office to: [1] Report an interference complaint; or [2] want to know if the FCC has type-accepted a particular transmitter for CB service.
{B} Write to the FCC if you have questions about the CB Rules: FCC Private Radio Bureau Personal Radio Branch Washington, DC 20554

No. It wouldn't make much of a difference.

The biggest thing that can degrades performance is losses. This is caused by bad connections and poor grounding.
Depending on how you have the antennas mounted you can try improving the grounding. The metal body of the vehicle is the groundplane. Make sure your connectors a good a clean and try to shoot for a good vswr. Under 2::1 is desirable and under 1.5:1 at the your desired operating frequency is excellent.but don't get stress out if you can't get under 1.5:1.

AMATEUR RADIO NEWSLINE(tm) REPORT #1265 – NOV. 9, 2001

Amateur Radio Newsline report number 1265 with a release date of Friday, November 9th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio leads the way at the New York City Marathon. This story is first on Amateur Radio Newsline report number 1265 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO AND SPORTS: - THE NEW YORK CITY MARATHON

Ham radio was once again at the start and finish -- and all along the route of this years 32nd running of the New York City Marathon. This years event was held Sunday November 4th and was dedicated to victims of September 11th terrorist attacks. Its theme -- “United We Run.”

The starting line was at the Staten Island Side of the Verrazano Narrows Bridge. According to Stew Seit, WA2JNF, who was assigned there, it was a moment of total patriotism:

--

WA2JNF: “On the bridge waiting for the cannon to go off, everyone began singing patriotic songs. It would brng a tear to your eye. There were 30,000 people singing. It was something to be seen.”
--

But Seit and almost 500 other hams were there to provide communications for the event. And according to WA2JNF, even though there were lots of cellular phones, it was ham radio that was the communications backbone once again:

--
WA2JNF: “Everyone was running around with digital radios, Nextel’s, cellular phones. But when the need came to get the message through they turned to us hams. Regardless of how many cell-phones or trunked radios they have tied around their necks, when the message was of priority nature, and they wanted to make sure it got through, they spoke to one of the hams who was handling the communications and we got the message through”
--

The crowd lining the route was estimated at more than two million. Many were waving small American flags in memory of the thousands killed in the terrorist attacks.

ARRL Hudson Division Vice Director Steve Mendelsohn, W2ML, heads up the the ham radio communications for the Marathon. In fact, he has been organizing the ham radio effort ever since Amateur Radio became a part of the event many years ago. He says that for him, for the group of Amateur Radio volunteer communicators and for the people of the Big Apple, this years New York City Marathon was like none ever before:

--
W2ML: ”It was truly a celebration of life. It was a way of saying to the terrorists: ‘look -- we are going on with our lives. You didn’t stop us. On the contrary, you united us.’ “
--

Tesfaye Jifar of Ethiopia set a record in winning the mens catagory. He ran the 26.2 mile course in 2 hours, 7 minutes, 43 seconds. The old record of 2 hours, 8 minutes and 1 second was set in 1989. And as Jifar broke the record it was a corps of ham radio operators that guided him -- and the 30,000 other competitors in the New York City Marathon -- to a safe completion of this years run.

More on the Marathon is on the web at www.nyrrc.org. Our complete interview with Steve Mendelsohn W2ML can be downloaded from our FTP page by clicking on the newscast number at the top of the www.arnewsline.org home page. (ARNewsline(tm))

**

RADIO AND SPORTS: THE SANTA CLARITA MARATHON

Sunday November 4th also saw another Marathon where ham radio played an important role. This one took place in Amateur Radio Newslines’s own back yard. It was the Santa Clarita 5 K Marathon and featured ham radio as it primary communications. Take a listen:

--
Audio Here
--

About three dozen hams from the Los Angeles County Disaster Communications Service and the Santa Clarita Valley Amateur Radio Club provided this years communications support. Most of it was on two meter F-M using the 146.79 MHz W6JW club repeater.

--
Audio here
--

The Santa Clarita Marathon may take place in a Los Angeles suburb, but it is by no means a small event. Several thousand runners take part and its course is USA Track and Field certified. In fact, this event is a qualifying race for the famed Boston Marathon.

More information on the event is at www.scmarathon.org. The Santa Clarita Amateur Radio club’s home in cyberspace is www.w6jw.org. (ARNewsline(tm))

**

TECHNOLOGY AND RADIO RULES: FCC PUTS KENWOOD "SKY COMMAND" PETITION ON PUBLIC NOTICE

Turning to regulatory matters, the FCC has put a rulemaking petition from Kenwood Communications Corporation requesting that the government relax restrictions on Amateur Radio auxiliary station operation on public notice. Amateur Radio Newsline’s Bruce Tennant K6PZW has the details:

--
The FCC assigned the rulemaking number RM-10313 to the petition in which Kenwood asks the government to permit hams to use control methods like its own Sky Command radio remote system.

According to the ARRL Letter, Kenwood’s Sky Command lets a user control a fixed location High Frequency station using a pair of dual-band VHf/UHF transceivers on frequencies in the 70-cm and 2 meter bands. Kenwood wants a change in Part 97 rules that would expand permission to operate an auxiliary station on all 2-meter frequencies above 144.5 Mhz, except on 145.8 to 146.0 MHz.

And while not mentioning Sky Command by name, Kenwood says that the proposed rule change would allow the development and use by amateurs of new technology devices and increase the utility of the limited amateur allocations. Current FCC rules limit auxiliary operation to certain frequencies above 222.15 MHz.

In July 2000, the FCC declared that use of the Sky Command did not comply with Amateur Service rules--specifically Section 97.201(b). It also declined to grant a waiver make it legal. The ARRL commented in opposition to Kenwood's earlier efforts to have the system eclared to be in compliance, and it refused to permit Sky Command advertisements to be published in its QST magazine.

In its Petition for Rule Making, Kenwood asserts that auxiliary operation is poorly defined and significantly overregulated in the FCC rules. Kenwood also argues that present limitations on auxiliary operation no longer are appropriate in today's amateur environment and should be withdrawn.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW.

--

Again, the Commission has assigned the rulemaking number RM-10313 to the petition from Kenwood. Those interested may view and comment on it via the FCC's Electronic Comment Filing System. (ARRL)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the New Orleans VHF Amateur Radio Club Net on the W5MCC 146.85 repeater serving my home town -- New Orleans, Louisiana.

**

TECHNOLOGY AND RADIO RULES: DIGITAL WIRELINE REMOTE BASE OPERATION BEING TRIED IN THE UK

A British ham radio operator has been granted permission to experiment with a digital wireline multi-band remote-base system. The experimental station was made possible by combining a popular H-F transceiver, the support of the national ham radio society and a cooperative government regulatory agency. Jeramy Boot, G4NJH, reports from Nottingham in the U-K:

--

Dave Gould, G3UEG, has received a Notice of Variation as a Special Research Permit to set up an HF station that is remotely controlled over the telephone network. This has come after 16 months effort liaising with the RSGB Licensing Advisory Committee and the Radiocommunications Agency and has been finally approved after a site inspection. The system is based on a Kachina 505DSP transceiver and Kachina's own specially-designed remote control system. The audio is digitised and then multiplexed with the control signals. The resulting single data stream is encoded and then passed over the telephone network using standard modems. At the remote end the data is decoded and the audio is split from the control signals and passed to the transceiver. The system will operate at a line speed of 28K or better and includes strong security, failsafe and shut-down measures.

Jeramy Boot, G4NJH
--

While we in North America take wireline and radio remote-base operations for granted its new to many other parts of the world. Anyone interested in receiving further information or with ideas to assist Dave Gould, G3UEG, may contact him by e-mail at david.gould@btinternet.com (RSGB)

**

ATTACK ON AMERICA: COMANDO SOLO DOES NOT WANT RECEPTION REPORTS NOW

If you are an SWL or ham who listens to shortwave -- and -- if you are planning to send a confirmation card to Radio Solo, the word right now is -- dont! This as the United States forces 193rd Special Operations Wing asks that reception reports and cassette tapes of its Commando Solo flying radio station broadcasts over Afghanistan not mailed to them at this time.

According to the Media Network e-newsletter there are two reasons. Obviously, they are involved in operations over a theater of war and need to lessen their peripheral workload. Also, due to the Anthrax scare in the United States, the U.S. mail system is overloaded with new safety procedures. In other words, your report may be indefinitely delayed or never opened. (Media Network E-Newsletter)

**

ATTACK ON AMERICA: NYC TELEVISION SEEKS NEW HOME

Seven weeks after a terrorist attack caused the collapse of the World Trade Center, hundreds of thousands of homes in the New York City area remain unable to receive more than four television stations. Because the main antennas atop the north tower came down, all the local stations, except Channels 2 and 41, which had backup antennas on the Empire State Building, had lost a significant part of their audiences. The situation improved last week when two more of the stations that lost their main transmitters began broadcasting from the Empire State Building site. Amateur Radio Newsline's Henry Feinberg has more:

--
On Thursday morninng, October 31st, Tribune-owned WPIX-TV channel 11 switched on a transmitter giving it an over-the-air signal said to be similar to what it was prior to the terrorist attacks. WNBC-TV channel 4 -- which in the late 1940's was the first to broadcast from the Empire site -- made a triumphant return later the same day when it flipped the switch on its new Empire located transmitter.

As an interim step to get back on the air, most local broadcasters had opted to use the old Armstrong Tower located in Alpine New Jersey. But the Alpine tower is not high enough and is to far away from the majority of the New York City demographic audience to provide clear reception throughout the metropolitan region.

The Empire State Building was the home to almost all New York City television broadcasters before the World Trade Center was built. Many broadcasters want to return to it but the New York Times says that Empire has to little space and not enough electrical power to accommodate the demands of all the stations. So a coalition of 11 broadcasters in and around New York are exploring options that include sharing management of a broadcast tower built to their specifications and needs.

The Times says that the long-term situation may be the construction of an enormous stand-alone broadcast tower. One that is perhaps 2,000 feet high and preferably be somewhere near the World Trade Center twin towers site.

But broadcasters will face a large number of issues if they persue the stand alone tower idea. Chief among them are the wants and desires of the residents of New York City. Many of them have made it clear that the area where the twin towers once stood be rebuilt a both a new trade center and also as a lasting monument to those who died in the terrorist attacks of September 11th, 2001.

Not far from the Armostrong Tower in Alpine New Jersey, I'm Henry Feinberg, K2SSQ, reporting for the Amateur Radio Newsline.

--

Aside from the political issues mentioned in Henry's report there will be numerous other technical roadblocks. First is that of protecting the Philadelphia and Boston demographic television markets from interference. And if such a project is approved by the city at a different location, the Federal Aviation Administration will likely demand that it be built where it will avoid established flight patterns for local airports. And there are not very many of those in and around the metro New York City area. (ARNewsline(tm) from various published news reports.)

**

ATTACK ON AMERICA: VERTEX STANDARD / YAESU DONATES GEAR

According to a recent story in the ARRL Letter, Vertex Standard, which manufacturers Yaesu brand gear, has donated several pieces of equipment to Virginia ARES. The manufacturer had arranged to loan an FT-7100 transceiver and three of it's VX-5 hand-held's during the response to assist the Salvation Army at the Pentagon terrorist attack site. When the work concluded, Virginia Section Emergency Coordinator Tom Gregory, N4NW, e-mailed to thank the company and to inquire about returning the equipment. Vertex Standard Executive Vice President Mikio Maruya, WA6F told him that Virginia ARES was welcome to keep it on hand for future emergencies. The Woodbridge, Virginia, Ham Radio Outlet store cooperated in providing the Virginia ARES team with the needed equipment on September 13th. (ARRL)

**

REPEATER COORDINATION NEWS: NFCB AND NFCC ELECTION RESULTS

The National Frequency Coordination Council -- or NFCC -- has elected Nels Harvey, WA9JOB as its new President. Harvey replaces Owen Wormser, K6LEW. Wormser had served as Chairman of the original drafting group that resulted in creation of the NFCC back in mid 1990's and as several terms as President.

Also elected to office are Dave Baughn, K4XI as NFCC Vice President, Dick Isely, W9GIG as Secretary and Clay Freinwald, K7CR as the organizations Treasurer. Meantime, Clay Freinwald, K7CR, and Nels Harvey, WA9JOB, have also been elected for two year terms on the National Frequency Coordinators' Board of Directors. Both ran unopposed. (ARNewsline(tm))

**

REPEATER COORDINATION NEWS: SERA DROPS UNKNOWN CATEGORY

The South Eastern Repeater Association says that it has dropped use of the term 'unknown' for listing repeaters that it has little or no information on. According to the organizations publication Repeater Journal, the listing of about 150 repeaters as 'unknown' was intended to prod their owners to file delinquent updates or help clear the groups records of repeaters that are no longer on the air.

It did neither, but it did cause confusion for ham radio enforcement efforts. This occurred earlier this year when FCC Special Counsel Riley Hollingsworth cited the South Eastern Repeater Association's Unknown Repeater List as grounds for dismissing a complaint against an uncoordinated West Virginia repeater that had been accused of interfering with a coordinated system in Kentucky. The coordination counsel's FCC Liaison is reportedly working with Hollingsworth's office to clear up the confusion. (SERA Repeater Journal)

**

HANDI-HAMS: WINTER RADIO CAMP IN MALIBU IN MARCH 2002

The next Handiham Radio Camp session will take place the first week of March, 2002, at Camp Joan Mier in Malibu, California. That camp will be offering classes in Technician, General, Extra, Operating Skills, and JAWS computing.

There is no tuition charge for West Coast or D-X members aside from the $45 registration and insurance fee. If you want to receive a camp application packet, please e-mail handiham@courage.org or call 1-866-426-3442 -- days -- Central Standard Time. The most current camp information is available on the Handiham website located in cyberspace at www.mtn.org/handiham. (Handihams)

**

INTERNATIONAL – BAHAMAS: FEES GOING UP

The annual fee for those holding a Bahamian Amateur Radio license has increased to $25. According to the ARRL news, The new fee applies for licenses renewed after August 1. The cost to "catch up" on past renewal fees prior to 2002 is $6 per year. Some US amateurs with Bahamian tickets were surprised to get letters requesting the back renewal fees and threatening fines and revocation. According to Dick Long, C6AKE, the Bahamian Public Utilities Commission--which handles licensing there--collects $6 a year for the years your license has been expired--this has always been its policy, he says. If you don't plan to use your license anytime soon, Long advises returning it to the P-U-C or sending a letter stating that you won't be using it again. "If, at some future time, you want to return to the Bahamas, you can always apply for a new license," he added. The P-U-C e-mail address is puc@batelnet.bs. (ARRL)

**

INTERNATIONAL - BELGIUM: A BLESSED EVENT

Hams in Belgium are getting to take part in a truly blessed event. This, as John Devoldere ON4UN who is the President of the Belgian national Amateur Radio society announces that nations radio amateurs can use the special prefix OQ instead of their usual ON or OT prefixes.

According to Devoldere, Belgian telecom authorities issued this special prefix on the occasion of the birth of Princess Elisabeth. The permission to use the OQ prefix began on October 26th, runs until December 31st. (RSGB)

**

INTERNATIONAL - NEW ZEALAND: THE NATIONS HAM-STATS

The New Zealand Ministry of Economic Development reports that as of November 1st that nation has 3,295 General Class license holders, 1717 Limited license class, 24 Limited Novice and 25 Novice class operators. These hams share 205 voice repeaters, 19 television repeaters, 29 digipeters, and 42 beacon operations. Mix in two fixed licenses and the grand total is 5358 licenses issued. (NZART)

**

BREAK 2

(5 sec pause here)

**
HAM RADIO IN SPACE: ISS TALKS TO NEW YORK CITY SCHOOL

Ten elementary school students from New York City had some very specific questions about current events for International Space Station Commander Frank Culbertson. To the question, "What did it look like in New York on September 11," Culbertson responded that he could see the smoke rising from the World Trade Center site and drifting south.

--
Culbertson: “On September 11th we happened to be coming over a few hours after the attack and I could see a large column of smoke coming out of the World Trade Center and floating off to the South and a kind of a fog of smoke all over the Southern part of the city.”
--

Culbertson went on to explain that he took pictures of the tragedy from space. He further related that he found out about the event while talking to his doctor during a scheduled medical conference.

Another youngster wanted to know, "What does Afghanistan look like from space?" Culbertson answered that it appeared to be very desolate and rugged.

The questions could be expected. The children are students at P.S. 234, with its regular campus only two blocks from the site of the World Trade Center.

On September 11, all 650 students at the school and their teachers evacuated their building without a single casualty. The school community has stayed together despite the turmoil, and is now housed in temporary quarters elsewhere in Manhattan. Culbertson told the students that he admired them for their courage, and told them to continue to study.

--
Culbertson: “ I want you to know that the whole world is very proud of you. Its to bad that you had to move from school to school, but we are very proud that you are continuing to work and take your education seriously. Things will be alright. Don’t worry.”
--

The students asked a total of twenty questions during the ten-minute contact. Some thirty teachers and parents and reporters were also on hand as were reporters from the New York Post and New York Daily News newspapers.

The ham radio contact was made through the Amateur Radio on the International Space Station project, an international coalition and was carried live by MSNBC on its website. Former NBC science editor and Newsline anchorman Roy Neal, K6DUE, moderated the event. Communication was handled through W6SRJ, a club station at Santa Rosa Community College in California, with Herb Sullivan at the controls.

P.S. 234 has its own website. Its in cyberspace at www.ps234.org/about.html (ARISS via K5YFL)

**

HAM RADIO IN SPACE: AMSAT-OSCAR 40 UPDATE

AMSAT's Peter Guezlow, DB2OS, reports magnetorquing of the OSCAR 40 ham radio satellite is again in progress. Guezlow also says that operational periods for the RUDAK system have been extended recently. This, to allow downloading of several important RUDAK G-P-S files.

AO-40 is currently in a long period during which the Earth eclipses the sun near the satellite's perigee. This actually began about August 28th, and will rapidly increase in length. The eclipses will continue well into June 2002. (AMSAT-NA)

**

SPACE AND SCIENCE: A LOT OF BIRDS UP THERE

SpaceDaily reports a new survey by the Teal Group has identified some 600 active satellites in Earth orbit or in deep space. The survey factored in all satellites launched since 1980, and, after a process of elimination, arrived at an estimate of 600 to 610 for satellites that remain active today. (AMSAT-NA)

**

DX

In D-X, you may recall that shortly after the September 11th terrorist attacks on New York City and the Pentagon, the government of Kuwait permitted its ham radio operators to the call sign 9K2USA. Now Bob Furzer, 9K2ZZ, reports a very positive response to the use of 9K2USA.

9K2USA was used by all Kuwaiti hams through September 30th as a token of the sympathy and support for the people of the United States from the citizens of Kuwait. It was also meant to be a statement of deep condolence.

Furzer now tells the Ohio Penn D-X Newsletter that the Kuwait Amateur Radio Society wants to thank all of those radio amateurs who e-mailed their support of the use of this special call. 9K2ZZ also says that the design of an official commemorative 9K2USA Q-S-L card has been finalized and is now posted on the website at www.k4cy.com. (OPDX)

From the U-K comes word of a new microwave D-X record. At least a new record for that nation. On Sunday October 21st the UK distance record for the 47 GHz band was raised from 163 to 203 kilometres. This happened when G7MRF and G0HNW, from Cambret Hill in grid I-O-74 had a two-way CW contact with G0IVA in gridsquare I-O-73 in North Wales. This distance comfortably exceeds the former record of 161 kilometres set in September 1999 by the same group. Reports of RST 519 and 419 were exchanged. (RSGB)

**

THAT FINAL ITEM: A MESSAGE TO REPEATER OWNERS FROM THE FCC

And finally this week, a word about repeater communications responsibility. It comes from the FCC's chief ham radio rules enforcer Riley Hollingsworth, and was included in a recent RAIN Enforcement Log Question and Answer session. If you own and operate a repeater, the next few minutes will be very important to you:

--

First of all, no licensee is required by the [FCC] rules to set up a repeater. When you do so, you do have certain responsibilities.

First, assuming that you have applied for and received coordination from your local repeater coordinating body -- if there is one -- and in a lot of areas there are not and in which case you would skip that step. As long as you are not interfering with a coordinated repeater, everything is all-right.

Once you start a repeater, you have to keep a few things in mind. First of all, if it is using your call sign -- it is your station -- and you are responsible for it. You do have a few alternatives as far as controlling it, but essentially it is your station and your responsibility.

The rule that states that you are not responsible for inadvertent transmissions I am afraid is often misunderstood. It only applies to inadvertent transmissions. [These are] transmissions that you let through on the repeater -- and I think it was designed for [modes like] packet anyway that you let through on the repeater before you realized what was happening.

Now, rules violations that occur by your users on a day-in and day-out basis or rule violations that go on for several hours are your responsibility as well as that of the users that are committing the violations. No dictionary in the world would define those types of situations as "inadvertent," and I am afraid that a lot of people just do not understand that.

If you put a repeater on [the air] you are responsible for its proper operation. Now, if you can't do that, or you do not have the time or the inclination [to properly control it], then your choice is to shut if off and to do something else. This is very important in these times because Amateurs are being listened to more than ever before.

Everyone seems to be buying scanners and short-wave radios. Very often a repeater is new person's first exposure to Amateur Radio -- and a potential recruit -- I might add. And, very often, it is the news media's first exposure to Amateur Radio.

If your repeater is an embarrassment to Amateur Radio, then you should shut it down and seriously examine your motives for wanting a repeater. You will be held responsible for regularly occurring rules violations, as well as the people committing the violations.

I would hope that more and more Amateurs would understand this. I think that the rule that you are not responsible for inadvertent transmissions has been misinterpreted by a number of people.

--

What Hollingsworth really seems to be saying is that your repeater is kind of like your house and your surrounding property. Yes, you have responsibility to make your home secure for you and your family. You also have a responsibility to keep it and its surroundings neat and clean so that your neighbors will also enjoy the view. (FCC, RAIN)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address

> want to.

Thats right no one is twisting your arm.

>Correct, you don't, but on the other
> hand if you post something to my dislikes, I
> have no way of knowing until I have opened
> it and started reading it.

That's the chance *you* must take when reading anything, the same goes for a book you never know what it will say until you open it up and read it, if you don't like what is said put it down after the first few paragraphs easy choice.

> Worse if I have kill filed them and have no way of knowing it's a post
> from them, because they are changing there nic just to bye pass newsgroup
>readers filters. That is what I would call as forcing someone to
> see their post, by bye passing filters.

Again Landwhale, no one is forcing you to read anything you take a chance with each and every post you open and read. If after reading the first few lines and you decide you don't want to read it close the post.Your the stupid asshole who reada and then replys to those same post you say you want to ignore, whats that tell me? that you really don't want to ignore them. See just as you replied to my post thru Bert, If you really didn't want to *read* my post you would just ignore it but you cannot, there is a fatal attraction or something.

> Lets see, someone didn't like a certain
> person views on here and they tried to have them
> fired for using the newsgroup through company
> servers, do you think that is fair?

Ut oh here goes that criminal mentality again, Just because someone else is doing it is ok for you to. Does that make it right? Is it fair that legal Cbers have to wade thru illegal amp posts?

>

I find this "statistic" interesting, since it would seem to be at odds with other, more recent reports that claimed that the overwhelming majority of RFI problems were the fault of the "interfered with" device lacking proper shielding, or designing for RF immunity. This study came as the number of complaints increased disproportionately with the increase in CB and Ham radio popularity. There were examples of long-time ham and legal CB operators suddenly having problems with people, who had never had a RFI problem, until they purchased a new TV or some other electronic gadget.

In fact the FCC maintains a list of "RF hardened" phones that were tested to greatly reduce absorbed RF energy.

What is apparent though, is that if you are interfering with someone's entertainment equipment with 4 watts of power, when you kick on the "boots", it will only get worse......

>"Lelnad KC8LDO doesn't believe you. He claims to have a very close
>friend who is a lawyer with the FCC

Since you like wasting your time so much digging up old posts of mine why
can't you dig up one where I made such a claim about a very close friend
who is a lawyer with the FCC"? Good luck finding what's not there Twisted.

>but you must confirm it in the exact manner he specifies by going to a
>hammie room and being told so since no media have ever confirmed it.

In reality you have the perfect chance to get the answer right from the
source, whether operations on the so-called "freeband" has ever hurt
anybody. So why are you so chicken about sending a simple E-mail to Phil
Kane? Since he worked for the FCC he will give you the real dope, and is a
creditable source to prove YOUR point.

From your quote below (from http://sporadicwaves.tripod.com/page7.html) you
are well aware already of the problem.
==========
>While I can somewhat empathize with the operators who are attempting >to
defend this bit of DX space, especially the ones who are located >outside of
the U.S. and are permitted to transmit there, I can't seem to >shake the old
adage that keeps playing in my mind, "If you are not part of >the solution,
you are part of the problem."
==========

Further more you don't seem to like US operators much that use amplifiers
either from this quote (http://sporadicwaves.tripod.com/page8.html).
Particulay the ones who run power, i.e. amplifiers.
==========
>Of all the DX and countries I have ever heard, I find myself embarrassed
>for our own operators here in the states. The high profile spectrum
>splatters usually get their due, one way or another. Unfortunately, for
>many fine operators and listeners it doesn't come soon enough. Rather >than
retaliate with gobs of power, ...
==========

In your own words Twisted "high profile spectrum splatters usually get their
due" so you don't mind if the FCC bust them right? That's how they get
"their due". And as you said, in your own words "If you are not part of the
solution, you are part of the problem."

"Twistedhed" <twistedhed@webtv.net> wrote in message
news:20287-3BEFF01B-94@storefull-126.iap.bryant.webtv.net...
Lelnad spat: You have the name of a contact who can either confirm or
deny any and all of your dumb arguments,

"In the first place, I didn't ask for a "contact" to orally confirm what
you claim."

What's so "orally" about sending a simple E-mail or news group message?
The term ""orally" has something to do with the mouth the last time I
checked the dictionary, not with the fingers. So you forgot how to type
or something?

"Well, metaphorically speaking, yes. But you are splitting hairs. you
want me, to go to a hammie forum, where you claim someone will tell (er,
TYPE) me a defense against your argument. Not gonna happen.'

You have wasted more time ducking - dodging - and evading the issue
than it would have taken you to type out a simple message to him
Twisted.

"This doesn't concern "him", whoever he may be. This concerns your
inability to back what you say, not for me to hear it from someone I
don't know from a can of paint that I should take at face value because
you say he is credible. Even if he was, he isn't a media source. It's so
simple you're drowning. Simply show one media source that backs your
claim. you can't, because it is BS."

Besides the argument is yours, not mine, concerning the issue of
operating on the Freeband doesn't hurt anybody. You wasted a lot of time
debating the point with several others, and never could prove your
point. But Jerry Oxendine did prove his with his first hand experience.

"I don't have an argument with anyone. Meritless arguments are brought
to me by shortcomers not unlike like yourself to destroy."

So what's the matter Twisted? You have the golden opportunity to get the
straight scope right from a bona-fide FCC employee "Phil Kane (K2ASP)"
to support (hopefully) your position, and you chicken out at the very
first chance you get.

"The chance was yours, not mine. You made the claim, the burden lays
with you to show it. End of story."

Heck the guy even has his ARRL E-mail address listed on QRZ - k2asp@arrl.net. I looked it up for you so you don't have to make up an excuse that your WebTV service doesn't work well on the QRZ site, of course we know that's not true from all the times you looked me up. I know your E-mail works just fine judging from the recent rash of forged messages too.

"Absoluteley mind boggling you are, 'Nad. Full of such grandiose behavior. Of course my email works, why wouldn't it? Here you go with the drunk talk."

One more time, I asked for a single, credible media link confirming it which you have failed to produce. Here you are beside yourself wanting me to go to a hammie room again."

Most of use already know from first hand experince about what goes on, and Jerry just confirmed it.

"Keep reaching for help, Lelnad. No one has thrown you a life preserver. You attempted to bring one of your hammie buds in to your mess and that didn't work. Now you're trying to bring Jerry back in it. Won't work, Nad. Your pathetic tactics are useless."

So far Twisted it's 1 to zip and not in the pirate CBer's favor either. So are you just going to stand there wearing your "Depends"

"Ooooooooch. You aren't working yourself into a froth of anger are you, 'Nad? I mean, you were doing so well and here comes an insult worthy of a junior high pupil."

while you watch the strikes being pitched against you? Or are you going to at least make an effort to swing at it by sending that message to Phil Kane?
--
"You want to drag someone into your mess, do it on your own. You made the claim, you didn't produce, you lost. Now talk about something you can understand or have a clue about, 'Nad."

From: pipedreams@hotmail.com (PipeDreams) While you may think a law is stupid, it is not your right to break it just because you fell it is stupid.

"I have as much right to break a law as you do
to play cop."

If you don't like certian laws surely run for office to change them, but you won't you would rather just break em it's easier right?

"And if you don't like cbers breaking with regulation of part 95, make a citizens' arrest <g>, but you won't (we all know why) 'cause you would rather just wreak as much havoc as you can here 'cause it's easier, right?"

btw, If you don't like our countrys laws the Taliban would surely take you into there country.

"And if you are so concerned with enforcing such laws go to a police academy. Your attitude will certainly be taken into consideration along with your prestigious military career."

Wow, you finally admitted that when breaking Part
95 it's not a law, you have to be charged with Part
47 to break a law, set yourself free!!

> The
> FCC is the one you should direct your anger at, not me.
>

Who says I haven't? Maybe I have written my congressman
& senator and asked for some rules to be changed. You
can run at the mouth trying to figure out if I did or didn't,
this should be interesting.

> >and people the purposely break laws are
> >criminals.
>
> OK. For the purposes of argument, what would YOU call >people who break
> laws?

If convicted of a crime by a court of law, otherwise I
call them innocent.

> >So if you look at all these laws you are just as much of a law
> breaker as the >people you accuse.
>
> Sorry, you lost me again. Logical disconnect?

Illogical answer, just what you do when cornered.

> > Your own words, laws are not meant to be broken, when >the AKC break
them >they are criminals.
>
> Sharky (or whatever your real name is) all you are doing is >attempting to
justify your habitual and intentional breaking of

Really? I have said in the past that I don't have a base station,
I put in a temporary mobile for a trip to the bay area and
promptly took it out. Now I do have lots of radio's, amps
antenna's, but I am not running any radio equipment at
present. But why do you preach on here, when you have
admitted not to talk on the cb and are striving to become
a ham operator?

The MIC wires for my 520XL seem to be broken...after 12+ years, no big deal... love this little CB.

I could repair the wires, but I thought I'd ask if there are any suggestions for a better replacement MIC? Just want to sound clear, no fancy echo tricks needed.

Setup is no linear, K-40 4.5 foot power whip, matched up good.

Thanks to all for the replies!

Noise is more of a popping. It's not real bad but sure is a lot better
w/ the engine off.

Yeah, I know I need to get a REAL radio but need the walkie talkie too.
Guess you can't have the best of both.

Regards,
PB

> or some other electronic gadget.

There is no conflict in the reports. The study draws a lot of
conclusions. It says that a third of the TVI would be eliminated
if the televisions had better "unwanted" signal rejection. It
also concludes that 45% of all CB-TVI complaints could be resolved
by the elimination of the use of linears on the CB.

In regards to the other comments, I should also point out that
the 22,000 CBers was the number of CBers that caused TVI, not the
total number of CBers. When you crunch the numbers in the report
you can see that -most- linears cause objectionable TVI -- and that
was in 1976. Now, 25 years later, there are far more linear amps
in use, and most are run with much less care in regards to harmonics
and distortion than they were in 1976 when CB required licenses and
the FCC had some enforcement presence. And, as I said before, the
study doesn't cover interference on any other bands.

I have provided the title to the study. Anyone wanting to bash it
can get a copy from the FCC.

> "their country" not "there country". Be a real American and stand up
> and speak out. Run for office to change them? What a JOKE!

The founding fathers broke laws in order to form new ones -- fair
laws under a new government. Freebanding hardly compares. Rosa Parks
violated a law in protest of unfair and discriminatory laws. RF piracy
hardly compares. The 55 mph speed limit was created to slow the use
of gasoline during the energy crisis of the mid-70's, and was later
repealed as it was no longer needed. Title 47 is revised bi-anually.

Do you think a law is unfair? There are ways - legal ways - to get
the law changed: Petition for an initiative or amendment; Write your
state and/or federal congressman; Join or support civil action
groups that work for your cause; Vote responsibly; etc, etc. Don't
"blindly" obey the laws, but learn about them and why they exist.
Yes, it's YOUR country -- if you don't want the responsibility of
being a citizen, then you deserve no benefits. It isn't perfect,
but it is a damn good system, and it works if you just give it a
try. But it won't work at all if you just throw up your hands and
give up, categorically denying any law because you don't have the
brains or balls to work within the system. If you do then you are
a quitter, and quitting is the one thing our founding fathers never
did. I'm sure they would be REAL proud of -you-....

You are confused again, sharkie. I don't make a habit out of littering,
and I certainly didn't do it intentionally. For that I paid the fine.
But the other law was completely unfair. I fought it and won, which
shows that you can indeed correct an bad law. So there are two issues
here, one of intentional and repeated violation of the law, and one
of taking the steps within the system to change them. And guess what
sharkie, you are out-to-lunch on both issues.

I like to think of the 70's as 'the first wave'. I think that CB's might be more popular now than ever, judging by the amount of traffic on the air and other things. But it's current popularity doesn't seem to be well advertised, maybe because CB isn't quite as user-friendly as it was in the 70's. There sure are a lot more degerates on the air these days, and that doesn't make it very appealing to the public, so I don't understand why it's so popular -now-. Maybe because there are more degenerates in the world....?

I'm rambling, I'll shut up now.

Hey Inigo, have you been reading the AKC FAQ again?

-Aaron-

Q: Illegal CB is civil disobedience. Like the Minutemen did during the
Revolutionary War. Or Rosa Parks during the Civil Rights protests.

A: We are, and always have been, open-minded to any argument providing

moral justification for this illegal behavior. Unfortunately, no one
has

provided such an argument.

I have to laugh because it's one group of criminals decrying another.
Like horse thieves complaining about "those lousy chicken thieves".

Funny, you'll even see it in this NG. The amp junkies claim to be
doing good by helping CBers to "run clean power" - but they think
freebanders and bootleggers go too far. The freebanders claim they're
"expanding CB" and promoting "good operating habits" - but they think
the amp junkies go too far.

5125. "crime": DEFINED

Newsgroup: rec.radio.cb
Date: 2001-11-13 22:29:59 UTC
From: voobner@yahoo.com
Message-ID: <fbc7a2.0111131429.497114dd@posting.google.com>
Source record: 104138

(from http://criminal-law.freeadvice.com/crime_law.htm)

WHAT IS A "CRIME?"

A crime is any act that violates the law. The definition of the prohibited act (or the failure to act in a manner that has been mandated) is set forth in writing by local, state and federal governments (in the form of a published statute). However, vestiges of common law crimes exist (common law crimes are defined by the customs of the unwritten law of England and the American colonies prior to the American revolution). Some states, such as California, have a statute stating that common law crimes do not exist; all crimes must be in writing set forth by statute.

Not all violations of law forbidding or commanding an act are crimes. *To be a crime there must be a defined punishment. If the law does not set forth the particulars of the punishment for the described act or omission, then it is not a crime (unless the state has enacted a "savings clause" which sets forth punishment for violation of law in the absence of a specific defined punishment for the particular act or omission).

(from www.fcc.gov - CB Rules)

*RULE 21 - {A} If the FCC finds that you have WILLFULLY or REPEATEDLY violated the Communications Act or FCC Rules, you may have to pay as much as $2,000 for each violation, up to a total of $5,000.

{B} If the FCC finds that you have violated any section of the Communications Act or FCC Rules, you may be ordered to stop whatever action caused the violation.

{C} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any FCC Rule, you may be fined up to $500 for each day you committed the violation.

{D} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any provision of the Communications Act, you may be fined up to $10,000 or may be imprisoned for one year, or both.

Bert, I agree either pressure those in place and who are able to make the changes you would like to see, or break the laws and risk getting caught. I would hate to see any of the guy who run amps in this NG get caught, I can see it now

Keyclown: Take me to the Judge, I am not a criminal until you convict me.

Judge: Ok Sir why did you key up that 10 kw amp near Methodist Hospital and set off all the pacemakers.

Keyclown: "Well I did it your honor because i don't think Cb rules are fair, what's it gonna hurt if I freeband and run a few extra watts."

Judge: Well sir, you do know that running hi power is against FCC Law correct.
Keyclown: "Yes Sir I do",

Judge: So you willingly broke the law Correct.

Keyclown:" Well Yes your Honor I did, But Twisty said i should break Laws that I don't see fit, and Landshark said i am not a criminal unless I get caught.

Judge: Twisty?? Landshark?? What the heck kinda names are they? Cb Handles
Keyclown: No Sir they are part of the rec.radio.cb legaldept. The fellows of the NG have said freebanders, illegal cb op's are just like our Founding Fathers Law Breakers".

Judge: Son do you mean to tell me these guys are saying ... Our Founding Fathers ... are criminals and law breakers?

Keyclown: Yes sir thats what I am saying, they also try and justify their position by comparing FCC rules to driving Laws, etc.

Judge: This sounds like a sick sadistic part of our society

Keyclown: Well your honor, This one guy were not sure if he is a real person or not.

Judge: Son, have you been drinking.

Keyclown: No sir no sir, What I mean is this Anti Guy.

Judge: Anti Guy? Is this some type of cult following?

Keyclown: No sir, It is a cb newsgroup, this guy Aaron, who we think is dwight or Leland or Sparky or some old guy in pa, well he calls us all criminals since we don't like to follow these outdated FCC rules.

Judge: Well son, you do know that criminal behaviour leads to more criminal behaviour...

Keyclown: Well your honor ... I mean we blow an occasional joint or 2, fail to report a few earnings to the Irs, so i mean talking on 27.555 can't be all that bad at least not in my mind. Why do these guys always have to hound us with these rules?
Judge: Well It sounds like my friend you know what is right and what is wrong yet you chose to walk on the wrong side of the Law. As trivial as laws may seem to you they have been created for a reason and you as a citizen of the United States must abide by them or face the full penalty under Law.

Judge: I hearby find you guilty of ignorance, guilty of being a keyclown, guilty of breaking FCC Laws. And ordered to pay a $10,000 fine. Case Dismissed.

Maybe you should quit being a seabag lawyer!

Criminal Law

Traffic Violations:
Traffic violations are "quasi-criminal" offenses, not violations of the general criminal law. Traffic violations are a mix of regulatory and penal offenses based on violations of state statutes and municipal ordinances relating to the operation of vehicles.

Punishment:

Traffic violations cover a broad range of infractions from violations such as riding a bicycle without a helmet, to major violations such as reckless driving. Punishment is generally limited to payment of fines, compulsory driving school attendance, points levied against your driving license, and suspension or revocation of your driving license. However, repeatedly committing traffic violations within a specific time period may result in increased penalties.

Rights:

Like crimes, Traffic violations must be proved beyond a reasonable doubt. However, unlike crimes, you do not automatically have the right to a jury trial for traffic violations. Some traffic violations are considered petty offenses not covered by the Sixth Amendment right to jury trial. Generally, you do have other constitutional rights, like the Fifth Amendment right to remain silent, when charged with a traffic violation.

Traffic violations constitute probable cause to stop your car meaning that law enforcement officers have a right under the constitution to stop your car and question you. Many serious criminal cases start when a law enforcement officer stops a car for a moving vehicle violation. Officers have the right to seize evidence of crimes, such as drugs or guns, that are in "plain view." Even if an officer cannot see evidence of crime, they can investigate suspicious activity that may lead to the discovery of wrongdoing.

Traffic Violations: FAQ

If you are ticketed or arrested in the city of Detroit for a traffic violation or a city ordinance violation, your case will be processed in the Traffic and Ordinance Division. This division handles the following types of cases:

- Civil Infraction traffic violations such as : speeding, illegal turns, going through a red light, etc. These traffic violations are non-criminal.

- City Ordinance violations that are criminal offenses such as violations of the gun law, prostitution, disorderly conduct, and drug offenses that violate city ordinance rather than state law.

> So i guess i cant do much better than that.:)

Jack, if I can bend your ear a bit it would be useful to know why. Keeps you from being sold a lot of mythology and worthless junque.

For a number of good reasons, 50 ohms -- a measure of the relationship of voltage and current -- was selected as the standard for coaxial-fed thingees about the time I was born and I am 58. So your radio expects a 50 ohm load just like your light bulbs expect 120 volts or so; no big deal. But it happens that a vertical in the clear is only a 34 ohm load so 50/34 gives 1.5. Again, no big deal. Start to sweat in the 2-2.5 range and only then if you don't suspect why.

You have a full-sized antenna resonant in its own right to CB freqs. If you cannot stand the length, you can replace some of the antenna's length with what is called a 'loading coil' at the base or up to the middle or as a continuous winding producing what are known as helical dummy loads. This introduces several cans of worms but it cuts the load, trade term is 'feedpoint impedence' down to something like 20 or 25: totally unacceptable. So they feed the antenna at a tap on the loading coil.

As it happens, it also reduces the bandwidth over which the antenna is decently resonant. The junkmeisters get around this by making the coil as highly resistive as possible which generates heat which has been known to produce some spectacular explosions when an amp is switched in. Whenever someone tells you about bandwidth much better than what you have with the whip, switch on the bullshit detector asappy. Repeat after me: nothing has more bandwidth than a 50 ohm resistor, nothing radiates as poorly.

Welcome to the wonder world of antennas! Nowhere else will you gain the sense of achievement and have as much fun while learning to cuss like a cavalry sergeant.

Dick NBK

Just in case you Missed the others.
Traffic Matters

Traffic citations are issued everyday by police officers and other state and county officers for violations of the statewide traffic code and various county ordinances concerning traffic control.
What are traffic citations?

Citations may also be issued for violations of rules established by agencies such as the stadium, airports and harbors. Citations may be given for violations of ordinances, rules or statutes pertaining to parking, moving and miscellaneous offenses.

What are "decriminalized violations?"

The adjudication of Traffic Infractions Law, enacted by the 1993 state legislature, took effect July 1, 1994. The two main purposes of this legislation were to make it more convenient for the public to resolve their traffic citations without having to appear in court and to allow judicial and law enforcement resources to be used more efficiently and effectively. These types of tickets are called "decriminalized violations" since they do not carry the possibility of jail time and the procedures call for civil penalties such as fines, community service or education. Examples of these decriminalized violations include speeding, running a stop light and parking or equipment violations.

Serious traffic violations, however, are not subject to this law and are still treated as criminal matters. The more serious traffic offenses include driving without a license, driving under the influence, driving without no-fault insurance, and reckless driving. Such offenses require court appearances and carry possible jail penalties.

Getting a new fleet of trucks at work. Have been STUCK with P.O.S. Cobra 29's for past 4 years. Finally, I talked mgmt. into going with Unidens. I have had a Uniden 66 with a 10 watt dead key kit, in my personal vehicle for years now, and the receive and xmit are very good. My question is about the PC68 and PC78. Are they both good, or is one better than the other?? Can you "bump" these up like the 66 and 76?? As long as they still receive as well as the PC66 does, I am sure myself, and the other drivers will like them. The Cobras are terrible receiving radios IMO. And not due to the antennas--- We have good ant.s and SWR's on all trucks.. Well, thanks, if anyone can give their opinions
....DT.

Hello All:

With a 250 amp alternator running the amp, how would you power the driver amp and radio, off the vehicles 12 volt system?

Or run regulators off the 18 volts from the 250 amp alternator, for the radio and driver amp?

Jay in the Mojave

These CRIMINALS should be ARRESTED! Arrrrrgh! LAWBREAKERS!

EXCLUSIVE - ONLY ON ABC 7
May 03, 2001 7:45am

Reporter: Andrea McCarren
Producer: Tracy Stokes

Washington, DC - A group of high school students visiting DC got more then they bargained for when they stopped at a national monument last month. The students were the winners of a nationwide patriotic essay contest.

It all happened at the Jefferson Memorial, a monument to one of our founding fathers. The award-winning group of high school students became so filled with patriotic pride, they spontaneously burst into singing the National Anthem.

"It was an awesome feeling. You just thought, I am so blessed to be a part of this great country," said Kirsten Winston, student. However, that feeling did not last long.

"We got to almost the very end and we were at the last stanza when the National Park Service asked us to stop," said Kirsten.

A Park Ranger asked them to stop because according to a federal regulation, any time a group of 26 people or more gathers at a national monument and attracts an audience, it is considered a demonstration, which requires a permit.

The students were the winners of the VFW sponsored essay contest, ironically entitled: What Price Freedom?

"I wish I could have been there. I'd have sung with them," said Cmdr. John Gwizdak, Veteran of Foreign Wars. The Commander in Chief of the 2.7 million member VFW was so outraged he demanded an apology.

"It sends the chills up and down your spine and all of a sudden, here we go, putting them down, making them feel ashamed of being a part of this country," said Gwizdak.

Late Wednesday, the apology came and the National Park Service blamed a new employee.

"I believe this was an employee who cared deeply about the memorial and this is how they thought they needed to behave. But this is a mistake we won't make again," said Robert Fudge, National Park Service.

The National Park Service would not get into the specifics of the disciplinary action taken, but did say that employee has been reprimanded and woni¿½t be stopping anyone from singing the National Anthem again.

N8:
LOOK in the LAW DICTIONARY. You will find that a Crime MUST have A DAMAGED PARTY. No damaged party (real human being) means NO CRIME! Also a law that is UnConstitutional on it's face does NOT have to be obeyed from it's inception! IS the Communications act of 1934 Constitutional? READ the Bill of Rights. Read the 10 Commandments of God. Read the 6th plank of the Communist Manifesto by Karl Marx written in 1848. Bouviers law dictionary will show you a lot of light on the subject. The Common Law is based on English & American tradition, and The Bible. The 6th plank is based on humanist anti-Christ tradition of Marx, Freud, & Darwin, which leads to a Lake of Fire. God does not Judge us on traditions of man built on sand, but on the Word of God that is etched in stone! You need to be saved from your communist "deathstyle." !

First of all, your 66 does NOT put out 10 watts dead key. NO kit will do that. Nor tune up. E mail me direct and maybe we can get together and I'll show you what it is REALLY doing on an accurate BIRD meter (the best).

The PC-68's & 78's are great radios, made in the same factory that made your 66 in the same country, just slightly modernized, same great quality. Your Cobras are JUNK because of the lousy construction they had when manfactured when they were made BY OUR ENEMIES, RED CHINA. I don't sell any new CB's made in China for this reason, I haven't since their inception in the mid 80's with the 19 & 21 "classic," which weren't classics at all!

>
> Mark

I've read about the ARF 2001 in the old EMTJ (Eleven Meter Times &
Journal) and it's receive capabilities were highly touted. Never had
the pleasure of hearing one perform though. I too had (have) an
AR-3500, but without the Channel Guard. It still ranks as one of the
best "receivers" I've ever used. I did have one in my Cobra
148FGTL-DX+, but this is an EPT6900-10Z board. I'd say the receive was
good but not great.

From: Glenn Sparks <gsparks@wyle.com>
Message-ID: <xvkI7.336$zk1.44423@typhoon.austin.rr.com>
Source record: 104169

I don't believe this is an official FCC document. I have read several of
the FCC documents, some great reading about early radio history there,
documents from when before they were the FCC. I have also read several
documents about the recent attempt to dispense of the distance limitation.
I do not thing in 1976 you would
see the FCC use the term CBers. I also do not think you would find the term
Linear Amps, they would probably spell out Amplifier and not use Linear.
Noting the date of 1976 when I was somewhat active in both Ham and CB,
almost every CB amplifier I ran into was the 50 - 75 watt range, there were
a lot of those, and only a few Ham amplifiers modified for use on 11 meters,
so the average would not be 120 watts. Lastly the consumer electronics
produced in 1976 were much more RF proof than the devices of today.

>
> Jay in the Mojave

Kind of a horse apiece, Jay. Given that you do not bump up against some limit somewhere you can make up the 20 amps or so the driver would draw by not turning on the heat/AC blower and not running the lites.

There is one and only one way to reduce DC voltage: burn some as heat. All a DC regulator amounts to is a big variable resistor with a quick hand on the knob. So dropping the 18 down to 14 for 20 amps is about 80 watts of heat which is not all that hard to handle. Couple of 3055s at worst. Would suggest a good crowbar unless you like feeding your rig 18 volts thru a shorted 3055. And, of course, the 20 amps you are feeding the supporting cast is not available for the top banana.

The voice of experience tells me to keep the two as separate as possible to avoid a smoldering ruin or a cascading cluster exercise.

Might also visit my friendly forklift dealer to see about 8 volt industrial batteries. Having a pair in the circuitry (17.4 volts at full charge) would be a lot kinder to the moose alternator. In days of old, a lot of 32 volt stuff was built so 8's were pretty common. Also avoided having someone scarff one to start his car. Shades of Granddaddy's old Wincharger.

Depending on the thickness of the fiberglass it generally pretty durable. However, I interpret Jack's comment that if he uses the longer steel whip he hits trees and not with the fiberglass whip. Perhaps Jack could clarify that for us.

Rules is not laws. That's why they is called "rules." I don't know how old you are, but I have been in radio since 1969. A CB license used to cost $20. Few people got them. Then eventually they dropped to $1, then they were free. All you had to do was send in an application. People didn't even do that. The FCC dropped that "rule" soon after that. Now, are CBers violating the "law" or not? Nothing physically has changed. It's still the same frequency range with the same characteristics. Except now it's not a "law."

>Jay in the Mojave

Jay, I am sure you will get many answers, like Dick gave you, but Personally I would run the 16 on the 250 by itself and run the radio and driver off the truck charging system. This by far is the easiest and best way for what you describe.

DAVE,

YOU REALLY NEED READ SOME BOOKS ON ANTENNA THEORY.

The fiber glass whip and the steel whip are both 1/4 wave antennas. You are neglecting the effects of the dielectric constant of the material that they are made out of and you are also neglecting the length/diameter ratio of the whip. Both of these will affect the length of the whip. What you are quoting is free space dimensions. In free space the physical and the electrical lengths are equal.

> >I don't know, but I doubt bootlegging on goverment frequencies and
> >breaking FCC rules is included in the definition of "patriotic".

>Rules is not laws. That's why they is called "rules."

Wrong. Here's one of my favorite explanations, courtesy of the erudite Frank Gilliand:

In case you didn't notice, the section that deals with CB is written in the format of 'rules' so even the dumbest of CBers like twistedhed can have quick reference to the applicable laws, and removes the need for them to cite chapter, part, section, subsection, and paragraph. The same format of 'rules' is used for other services under the same title.

The CFR is statutory law, as passed and amended by Congress. The fact that a law may call itself a 'rule' doesn't revoke or rescind any of it's legal authority. This argument that a rule is not a law (based on a logical fallacy called an 'equivocation') has already failed in the courts.

The CB rules are indeed law. The have been written as law, passed as law, enforced as law, they have survived the challenge that they are anything other than law. If is walks like a duck, swims like a duck

>I don't know how old you are, but I have been in radio since 1969.

A couple of posts ago you said you don't use CB or freeband. Is this your way of acting "mysterious"?

>A CB license used to cost $20. Few people got them. Then eventually
>they dropped to $1, then they were free.

Hey, that certainly proves nothing whatsoever - except that things change.

> All you had to do was send in an application. People didn't even
> do that. The FCC dropped that "rule" soon after that.

So the FCC changed their policy in response to a mass (patriotic) rebellion of citizens? Jeez, I thought it was in response to the Paperwork Reduction Act, but go ahead, on....

>Now, are CBers violating the "law" or not?

Yep. If they use amps or freeband they are.

>Nothing physically has changed.

B-b-but you just spent half a paragraph telling us it DID change.

>It's still the same frequency range with the same characteristics.

Yes, and...

>Except now it's not a "law."

Explain again how you come to that conclusion, because I'm not following.

Great to see you back.

Here's one I just RXed in my box...

President Bush has asked that we unite for a common cause.
Since the Taliban cannot stand nudity, and consider it a sin to
see a naked woman that is not their wife, tomorrow night at 7:00
all peace-loving women between the ages of 21 & 35 are asked to
walk out of their house completely naked to help weed out any
neighborhood terrorists.
Circling your block for one hour is recommended for this anti-terrorist
effort.

All men should position themselves in lawn chairs in front of their house
to prove they think it's ok to see other women nude. (A cold six-pack at
your side is further proof of your anti-Taliban sentiment.)

And to do my part, I'm buying stickers for all women who participate.
Stop by my house so I can put the sticker on you to show you helped!

Names and addresses of non- participants should be sent to CIA
Headquarters, Langley, Virginia.

The United States and Canada appreciate your efforts and applaud you.

Hi Moparholic.

Once again, the AKC shoot themselves in the foot.

He is absolutely correct... An illegal CBer gets reported if he causes inteference, the authorities do not have the time or money to go out looking for illegal use where it is not causing a problem.
The cases of "Hams" getting busted seems to be for the same reason, they are intefering with some other service, so they get noticed, and busted. The difference is, that the ones posted on here are intentionally intefering with a service.

But why should they spend tax payers money looking for unreported crime? How would this benefit the public, when they have not been affected by these alleged "crimes"?

One thing I must disagree with is this idea that it will all change, that they will start checking CBers just to see if they are breaking a law... Bull***t. Think of the cost of assigning people and equipment to listening, tracking, visiting, and checking CBers at random. How many citizens would welcome the extra tax burden when NOBODY would see any benefit from the actions.

Put simply... If it aint broke, don't fix it.

Brainbuster.

It's bad luck to be superstitious.

Actually you pretty right,
I had a guy a few years back try to take the cash out of my hand at a corner store. Well I grab him by his neck while the clerk yelled for his dad (I knew them both for almost 20 years of working in the neighborhood) Dad came down with Beretta 92 in hand and started pistol whipping him. When he wouldn't give up the money after several knocks to the head, his son yelled "step back he's going to shoot him" well he gave it up. The police came in and guess what? We all had cuffs on until they could figure out what was going on.
I didn't call him a criminal then or when I testified against him in court, so your theory there is shot to hell. All you are trying to do is stir the pot, I couldn't give a damn. I enjoy proving you wrong and I'm sure others do too.

Wow, if Mopar hadn't responded I would
never be able to reply.
I still like the hobby of cb radio unlike Leland
& Aaron who have said plainly, they do not and will
not talk on a cb radio.

Sure, why would you hurt his feelings? He and you have a lot in common.
You're both on the wrong side of the law. I don't doubt the cops had
some trouble at first figuring out who to haul in.

Twisted will not give it up because he remains totally, and in error, convinced, that I had shared some confidential information with one or more individuals that allowed them to effectively post messages that appeared to be from him. Since he can't read and understand header files to save his life he has accused no less than 6 or more people as the person(s) responsible for those forged messages. He can't seem to make up his mind even to this day who he wants to blame. In return Twisted, and several others on this group, have retaliated by posting forged messages in various news groups in a failed attempt to harass myself etc. Since I have the guts to use my real name, in my posts, and not hide behind fake handles like <Twistedhed> that makes me an easy target. When he is confronted with the truth he chickens out and then attempts to "twist" things around by quoting out of context or deliberately miss paraphrasing others comments to facilitate his lies and to continue to indulge in his delusional behavior. The last forged message event was just a day or so ago which has earn that person a caned account per the notification I just received from "newsranger.com" this morning.

The message below was posted by Twisted and shows clearly how "deranged" he really is.

==========

==========

Clearly he has a very sick mind. Anyone who wishes to spend some time researching the news archives will find many more examples of his insane rants similar to the above. Just look at how may people he has accused of posting forged messages too, and the several people who had pointed out where he has totaly screwed up in reading the headers.

I will not only not look down my nose at a former CB'er, I'll encourage that former CB'er to keep talking on CB! Just because you have one hobby doesn't mean you should forget about the last one...

Hell, I even still talk on the CB.. I won't leave my friends behind just because they aren't HAMs...

Oh, and I should note that the 706MkIIG can receive everywhere... the big question is whether he has it modded to TRANSMIT there, which, in the MkIIG, only requires the removal of one SMT Diode...

Group: rec.radio.cb Date: Tue, Nov 13, 2001, 9:37am From:
no-spam@junk-mail.net (Leland C. Scott)
"Twistedhed" <twistedhed@webtv.net> wrote in message
news:20286-3BEFEAF8-306@storefull-126.iap.bryant.webtv.net... "Lelnad
KC8LDO doesn't believe you. He claims to have a very close friend who is
a lawyer with the FCC
-
Since you like wasting your time so much digging up old posts of mine
why can't you dig up one where I made such a claim about a very close
friend who is a lawyer with the FCC"?
Good luck finding what's not there Twisted.
-
"I don't have to go very far....1) The person you keep trying to bring
in to defend you, you claimed he was a lawyer for the FCC.
2) You have stated on more than one occasion a close friend of yours is
a federal investigator. If memory serves correctly you claimed you went
over the Canadian border with him when he intimidated customs or
something with his badge. The exact details of your story aren't really
relevant as it was probably bullshit, much like the rest of what you
spew, but you did make the claim of a close friend who is a fed. If you
really were that drunk and can't remember typing it, I won't retrieve it
for you, but it is there, several times."
-
but you must confirm it in the exact manner he specifies by going to a
hammie room and being told so since no media have ever confirmed it.
-
In reality you have the perfect chance to get the answer right from the
source, whether operations on the so-called "freeband" has ever hurt
anybody. So why are you so chicken about sending a simple E-mail to Phil
Kane? Since he worked for the FCC he will give you the real dope, and is
a creditable source to prove YOUR point.

"Hahaha...'it's not my point, 'Nad, once again it is you that has an
issue, not I. Are you that challenged that you forget it was you that
made ridiculous cliams concerning cbers getting busted for stuff that
just doesn't happen?"

From your quote below (from http://sporadicwaves.tripod.com/page7.html)
you are well aware already of the problem.
==========
While I can somewhat empathize with the operators who are attempting >to
defend this bit of DX space, especially the ones who are located
outside of the U.S. and are permitted to transmit there, I can't seem
to >shake the old adage that keeps playing in my mind, "If you are not
part of >the solution, you are part of the problem."

==========
Further more you don't seem to like US operators much that use
amplifiers either from this quote
(http://sporadicwaves.tripod.com/page8.html). Particulay the ones who
run power, i.e. amplifiers.
==========
Of all the DX and countries I have ever heard, I find myself embarrassed
for our own operators here in the states. The high profile spectrum
splatters usually get their due, one way or another. Unfortunately, for
many fine operators and listeners it doesn't come soon enough. Rather
than
retaliate with gobs of power, ...
==========
In your own words Twisted "high profile spectrum splatters usually get
their due" so you don't mind if the FCC bust them right? That's how they
get "their due". And as you said, in your own words "If you are not part
of the solution, you are part of the problem."
--
Leland C. Scott
KC8LD0
--
"Thank you once again for revisiting the article I wrote that renders
you more incompetent each time you attempt to malign me. The number of
times you choose to visit that singular article
is overwhelming. You have done so on a regular basis ever since your
in-depth web search on me produced it. That aricle alone has the power
of stimulating you to the point of agitation and has done so for over
half a year now, which directly contradicts the adolescent reviews you
continue to dispell concerning it."

My unreserved opinion on whether or not I agree with the FCC busting
problem operators appears to be valued greatly by you. Ditto for the
sentiments I hold concerning high power amplifiers. Of course, my
article has nothing to do with your failure to provide substance for
your perversion of truths concerning the original topic and is merely
another of many attempts to circumvent the theme when it no longer
serves you. Your conditional surrender is accepted."

"Twistedhed" <twistedhed@webtv.net> wrote in message
news:20287-3BEFF01B-94@storefull-126.iap.bryant.webtv.net... Lelnad
spat: You have the name of a contact who can either confirm or deny any
and all of your dumb arguments,

"In the first place, I didn't ask for a "contact" to orally confirm what
you claim."

What's so "orally" about sending a simple E-mail or news group message?
The term ""orally" has something to do with the mouth the last time I
checked the dictionary, not with the fingers. So you forgot how to type
or something?

"Well, metaphorically speaking, yes. But you are splitting hairs. you
want me, to go to a hammie forum, where you claim someone will tell (er,
TYPE) me a defense against your argument. Not gonna happen.'
?
?You have wasted more time ducking - dodging - and evading the issue
than it would have taken you to type out a simple message to him
Twisted.

"This doesn't concern "him", whoever he may be. This concerns your
inability to back what you say, not for me to hear it from someone I
don't know from a can of paint that I should take at face value because
you say he is credible. Even if he was, he isn't a media source. It's so
simple you're drowning. Simply show one media source that backs your
claim. you can't, because it is BS."

??Besides the argument is yours, not mine, concerning the issue of
operating on the Freeband doesn't hurt anybody. You wasted a lot of time
debating the point with several others, and never could prove your
point. But Jerry Oxendine did prove his with his first hand experience.

"I don't have an argument with anyone.
Meritless arguments are brought to me by shortcomers not unlike like
yourself to destroy."

So what's the matter Twisted? You have the golden opportunity to get the
straight scope right from a bona-fide FCC employee "Phil Kane (K2ASP)"

to support (hopefully) your position, and you chicken out at the very first chance you get.

"The chance was yours, not mine. You made the claim, the burden lays with you to show it. End of story."

Heck the guy even has his ARRL E-mail address listed on QRZ - k2asp@arrl.net. I looked it up for you so you don't have to make up an excuse that your WebTV service doesn't work well on the QRZ site, of course we know that's not true from all the times you looked me up. I know your E-mail works just fine judging from the recent rash of forged messages too.

"Absoluteley mind boggling you are, 'Nad. Full of such grandiose behavior. Of course my email works, why wouldn't it? Here you go with the drunk talk."

One more time, I asked for a single, credible media link confirming it which you have failed to produce. Here you are beside yourself wanting me to go to a hammie room again."
Most of use already know from first hand experince about what goes on, and Jerry just confirmed it.

"Keep reaching for help, Lelnad. No one has
thrown you a life preserver. You attempted to bring one of your hammie buds in to your mess and that didn't work. Now you're trying to bring Jerry back in it. Won't work, Nad. Your pathetic tactics are useless."

??So far Twisted it's 1 to zip and not in the pirate CBer's favor either. So are you just going to stand there wearing your "Depends"

"Ooooooch. You aren't working yourself into a froth of anger are you, 'Nad? I mean, you were doing so well and here comes an insult worthy of a junior high pupil."
while you watch the strikes being pitched against you? Or are you going to at least make an effort to swing at it by sending that message to Phil Kane?
--
"You want to drag someone into your mess, do it on your own. You made the claim, you didn't produce, you lost. Now talk about something you can understand or have a clue about, 'Nad."

--
Twisted will not give it up because he remains totally, and in error,
convinced, that I had shared some confidential information with one or
more individuals that allowed them to effectively post messages that
appeared to be from him.

"It appears the majority of this group agree with me, Nad. I mention
this only because I know how much the need to be accepted here means to
you, but the fact is, it wasn't even a good dodge,"Nad. You are
impotent in the IQ category, Nad. This is your argument to give up, not
mine..you attacked, insulted and accused, not I. It was I that suggested
you take your issue with me to email so as not to subject the group to
your endless tirade of insults, but you adamantly refuse to even comment
on why you insist on carrying on here like you do when email will serve
your petty issues perfectly. You appear quite content solidifying your
position as one of the largest trolls among our fair cb citizens. You
are unable to give it up as I apparently hold a compelling and uncanny
ability to dominate your thoughts, which cause involuntary and angry,
liquor induced reactions evidenced by your complete obsession with a
single article, and the obsessive replies to any one of my single posts.

This is most recently demonstrated in this very thread. You replied to
a singe post of mine beginning at 3:29 PM yesterday. As the liqour
flowed and saturated both quadrants of your brain, you made another
reply to the same post at 12:05 AM this morning. I continued to torture
you in my sleep, as you once again visited the thread and made yet
another post (number 3) at 9:16 AM this morning to the SAME post that
your other 2 were directed at. That's 18 hours straight of you obsessing
on me, "Nad. AS always, get some rest, come back refreshed, and think
about taking your issues to email with me or to a shrink, 'cause you are
a bit disturbed."

Since he can't read and understand header files to save his life he has
accused no less than 6 or more people as the person(s) responsible for
those forged messages.
He can't seem to make up his mind even to this day who he wants to
blame. In return Twisted, and several others on this group, have

retaliated by posting forged messages in various news groups in a failed attempt to harass myself etc. Since I have the guts to use my real name,

"You can't even use a real email. No cigar."

in my posts, and not hide behind fake handles like <Twistedhed> that makes me an easy target.

"No. Your inability to hold conversation while reserving personal emotions is what akes you an easy target."

When he is confronted with the truth he chickens out and then attempts to "twist" things around by quoting out of context or deliberately miss paraphrasing others comments to facilitate his lies and to continue to indulge in his delusional behavior. The last forged message event was just a day or so ago which has earn that person a caned account per the notification I just received from "newsranger.com" this morning.

"Oh, brother. So let me get this straight. I alone, convinced the entire group you are an idiot troll and conspired with several others on here to
harass you? MMmmph! There is that grandiose behavior that is becoming more frequent. You don't rate enough in my world to be construed as a problem, Nad, therefore, the time I spend on you is limited to a few minutes per day replying to the posts you direct to me. It appears you have your plate full right now."

Don't think so
The message below was posted by Twisted and shows clearly how "deranged" he really is.

"The header-free message you forged below shows only your redundant anger and obsession with me and a preoccupation with mens private wear."

I doubt he would tell anyone if he did. You're right about the RX function on the 706MKIIG. Myself I have all 40 CB channels, all 16 FRS channels, all 5 MURS channels, two different local police department frequencies which covers about 4 to 5 cites, NOAA weather radio, the Oakland Mall security frequency, UO-14's up-link and down-link frequencies, plus a bunch of local repeaters on three different bands programmed in to mine. Oh my rig is not modified either by choice. I do have the instructions to modify it in my files however. The rig makes a nice multimode scanner when you're not yacking on it.

By the way are you going to the Fort Wayne swap this coming weekend? I'm thinking about going on Saturday to hear R.H. speak about enforcement issues. It would be the first time I would get to see the man in person. Before that I had exchanged some brief E-mails with him only.

Hello Doc. Why is the subject of 'export' radios being busted by the
FCC a "troll" post? The topic is certainly relevant to a CB newsgroup.
The post itself was a reprint of the FCC citation, presented without
comment. Please explain how this is a "troll" post.

Thanks for your suggestions, Phineas. I am all for hams getting busted
by the FCC as well as unlicensed individuals. Matter of fact, a lot
of the biggest CB abusers in this NG claim to hold ham licenses.

How does this shoot anyone in the foot, everyone knows the FCC is concentrating on cleaning up the ham bands and CB is secondary.

> He is absolutely correct... An illegal CBer gets reported if he causes
> inteference, the authorities do not have the time or money to go out
looking
> for illegal use where it is not causing a problem.

I know I am correct, but the same could be said about smoking marijuana if you do it in your own home and don't bother anyone you won't be caught, you don't see the police knocking on doors looking for pot smokers unless somyou get caught if someone rats you out, the same goes with speeding down a highway If no cops are on the road you can speed all day long, unless that is someone calls them and reports that you are driving like a fool.

> The cases of "Hams" getting busted seems to be for the same reason, they
>are intefering with some other service, so they get noticed, and busted.
The

I ask the same of all laws Smoke pot at your own risk, it is still illegal.

>
> One thing I must disagree with is this idea that it will all change, that
> they will start checking CBers just to see if they are breaking a law...
> Bull***t.

Who said anything about the FCC checking Cbers to see if they are breaking the law, i said there won't be any random stops by the FCC. What will change is after amatuer bands are cleaned up they will move there efforts to CB, where do you derive that they will be checking cbers to see if the yare legal or not is in your own mind.
.

Think of the cost of assigning people and equipment to listening,
> tracking, visiting, and checking CBers at random. How many citizens would

Hello All: And thanks for all the inputs and suggestions.

One of the locals who lives about half way to Vegas, went out and bought a radio, driver amp 2 pill, and 16 pill amp, and of all things a Wilson 1000.
New to CB and compation we had to make a bunch of changes.

The Wilson 1000 went south, replaced by a 102" SS whip, and some RG393 coax.

Had to install a duel run of Ought 2 gage wire from the battery and alternator ground connection, (that had to be made larger, ect ect) he was using the trucks frame as a ground connection. "No that won't fly"

The engine noise of the engine, fuel pump, and on board computer made receive a nightmere. We grounded the fender, firewall, and hood, this reduced a lot of noise on the Ford truck. But still have ignition and fuel pump noise. We'll get that fixed next weekend.

The power from the 250 amp alternator was totally run to the 16 pill amp, and vehicles power ran all the rest. He said the voltage was set at 18VDC but I measured 15VDC with my Fluke, and told him thats good for now, until we can fine tune the system. Had to tighten the alternator belt a lot too.

It must be working all right, pinned the Bird with a 1KW slug, and turned on the sprinklers when keyed.

Hello Explorer: Now thats a few pennies holding up a dollar!

If you have a lot of money invested in the radio, and amp, I suggust you
use a much better antenna.

The "Boys" call the A99 and I-Max 2000 the big fuse in the sky!

Jay,
All he needs now is a 4 pill to drive that 16 with from the 2 pill. He's not going to see big numbers until he gets some more drive into the 16.

Depends on what you mean by "law." A law is passed by an elected
authority, such as Congress, according to the Constitution. Rules and
regulations are given out willy-nilly by bureaucrats who are not
elected by the people.

No brainer anti-chrysler man:
YOU are not in the real CB world and give BAD advice. The man wants better CB's, not business band or Hambo rambo equipment. I have done work for a LOT of snowplowers, even hi-tech ones that I sold 108" whips to, and whatever snowplower I have worked for, they all get MANY MILES of range--not line of sight in a parking lot! Sounds like you need to call me next thurs. when I am up there on the e side so I can get you MORE range on yo snow plow trucks without non-N8 approved linikers, either! I have 22 + years experience with the best antennas for snow (non-cocaine) plow trucks! CB's are cheaper AND BETTER THAN CELL PHONES for snow plowers and most all snowplowers in an area are usually on the same channel.
Dave!!!!!!!!!!

These mics RARELY go bad! I can put a new, longer cord on it for you.
Otherwise, go to a truckstop and get a replacement mic that has a GRAY
button that you push to talk on, NOT a black one, wired for 4 pin
Cobra/Uniden. That is the right type for your CB.
Dave

===

Correct, you *are* wrong...
Changing posts to suit standard replies is Aarons modus operandi.

And "KAXN-9546" *DID* say the amps are "spectrally dirty". An amp has no way
to distinguish whether the operator has a license or not.

===
> > > and the IQ of the operator seems to be inverserly proportional to the

^
^ "Yea, that was me attacking myself daily for weeks on end as "dweebo"
^ demanding proof that Dogie made a threat, huh, Nad? Hehehe...get some
^ more rest, Lelnad."
===

Hi Twistedhed.

Can someone get "busted" for using an ISPs abuse address in their header? Is it not "Forging" for someone to claim that their message came from the Cotse abuse department.
If somebody used the "reply to sender" option, with the full message included... would the brown and smelly hit the fan?

But we all know that "forging" is not "forging" when an "AKC" does it... They claim to do it to save the world from "Keyclowns", and that makes it ok.

Oh brother, now I've heard it all. You guys will try and float any
lame excuse to violate US Code Title 47. What next? Won't pay income
taxes because your return doesn't have Bush's signature on it?

Hey, wait a minute, this sounds like another alias of the infamous
"chocolate jay" scammer the illegals are all crying about being ripped
off by in rec.radio.swap. If so, go right ahead sir. You do the band
a great service by parting illegal CBers from their cash and giving
them bupkis in return.

Why are you assuming I'm trying to violate Title 47? You have no
proof I'm doing any such thing. You're making FALSE ACCUSATIONS which
is a violation of some law or other. YOU LAWBREAKER!

Everyone knows amps on 11 meters are illegal. So what? So we have the
holier-than-thou schmoes out there trying to convince us that we ought
to change our ways. Look, I,ll make it real simple 4 u self appointed
cops and monitors or whatever the hell u refer to yourselves as. We know
the risks, if we take the chance, most of us are ready to deal with the
consequences should the heat come down. I have respect for MOST hams,
but I achieve the same results at a fraction of the cost. If I bleed a
neighbor, all they have to do is knock on my door. We will work it out.
I have been in the same area for quite some years and have no problems.
If I am not hurting anyone, why the hell should you care WHAT I do? The
bottom line is you shouldn't. Get a life. You guys that bitch about us
freebanders and "peaked" radios have way too much time on your hands. I
don't need to run anymore than 30 watts where I am located and I talk
all over the world......yes.. on the freeband. Nothng pleases me more
than one of you cb rambos to come in to my conversation and start
preaching about rules. God, I love to squash you suckers.

Gettin' WAY-UP from the sandpile

Hello Train: Thanks for the input.

Got a few more things to fix and change before upping the drive. But the power now seems to be a question, as in if the 250 amp alternator is enough? I don't know what you can squeeze from them over the 250 amp rating?

I have a 100 amp 115VAC power supply I can use as a supplement while testing.

rg 213 is a good choice of coax, it won't break the bank and the difference compared to the others is negligable.. There are 2 coaxes needed , 1 is for the vertical part of the antenna which is good for local talking, and the other is for the horizontal side which is good for talking skip. Get it up at least 36 feet and it will work great.

The higher the better, really. If you can get a magmount up to the roof, great. If you can rig a stakehole mount to get the antenna above the cab, even better. Direct RF ground connections are better than inductive grounds.
Try a 102" steel whip on a string from the stake mount, you'll likely get better performance.

Well if somebody could catch him on 11m, and PROVE he's using non type
accepted equipment to do it, then there is reason to say something about it.
The fact that he's got the mic plugged in means nothing. Like I stated in my
prior message I have all 40 CB channels, 14 FRS channels, etc programmed in
to my rig, which is the exact same model as N8's. All that happens when you
press the PTT button when outside of the Ham bands is "Nothing", the rig
will not even attempt to transmit, period, without being modified first.

Now if you saw the red TX LED on in that picture, Oh-Oh. You would have him
nailed then.

> Does N8 always tune to a CB frequency to increase his radio knowledge,

Carl,
Which do you prefer? There might be some difference in what
you hear with the antenna on the top of the cab, or in a stake-hole,
but it won't be much. Higher is better, and getting the antenna away
from the cab would help, but probably won't make a 'world' of
difference....

Oh, and I should note that the 706MkIIG can receive everywhere... the
big question is whether he has it modded to TRANSMIT there, which, in
the MkIIG, only requires the removal of one SMT Diode...
N8's radio has the mic plugged in. Looks awful suspicious to me.
--
Lelnad KC8LDO, screwed up again with:
Well if somebody could catch him on 11m, and PROVE he's using non type
accepted equipment to do it, then there is reason to say something about
it.

"Well, that has merit. Can you follow your own hypocrisy? You have no
proof of anyone here breaking any laws, therefore by your own tongue you
shouldn't be saying anything about it."

The fact that he's got the mic plugged in means nothing.

'The fact that someone talks about freebanding means nothing."

Like I stated in my prior message I have all 40 CB channels, 14 FRS
channels, etc programmed in to my rig, which is the exact same model as
N8's.

"Like I stated several times to impress upon your weakened gray matter,
several could be lying their collective asses off about the power they
run and channels they talk on. You don't have a pot to urinate in. If
you did you wouldn't be ot here all night long slobbering on yourself."

All that happens when you press the PTT button when outside of the Ham
bands is "Nothing", the rig will not even attempt to transmit, period,
without being modified first.
Now if you saw the red TX LED on in that picture, Oh-Oh. You would have
him nailed then.

"Oh, so irrefutable proof is required before you will throw a stone, eh?
Ok, just wanted to clarify that you believe everything you hear and
everything you read and that these pages are your gospel."

Does N8 always tune to a CB frequency to increase his radio knowledge,
or is this just the gay truck drivers rest area frequency?
--
Maybe you should reconsider what you just implied about CB using truck
drivers, you think they are "gay". Is that what you really meant to say?

I'm a novice apartment dweller who just purchased both,
and a Para Dynamics SWR meter is on the way.

The radio is the 200 channel type and I'm curious if
anyone can offer me tuning tips given these facts?

Also, is there any way to transform the muffled voice
transmissions I hear beyond the 40 channel band into
understandable signals, or will a properly tuned
antenna take care of that too?

Thanks much, and please drop me a direct line. I'm
looking for CB base radio recommendations as well.

^ forged news group messages, and he doen't like to be reminded about
that ^ fact.
^
^ And if you haven't looked closely it's ABUSE@cotse.net. Just the place
^ to send the complaints to that gets him busted, and anybody else dumb
^ enough to try his silly games.
^
^ "Yea, that was me attacking myself daily for weeks on end as "dweebo"
^ demanding proof that Dogie made a threat, huh, Nad? Hehehe...get some
^ more rest, Lelnad."
===
Hi Twistedhed.
Can someone get "busted" for using an ISPs abuse address in their
header? Is it not "Forging" for someone to claim that their message came
from the Cotse abuse department.
If somebody used the "reply to sender" option, with the full message
included... would the brown and smelly hit the fan?
But we all know that "forging" is not "forging" when an "AKC" does it...
They claim to do it to save the world from "Keyclowns", and that makes
it ok.
Brainbuster.

"Hiya Brain, hmmmm, I dunno, never concerned myself with that aspect of
it, as his headers change almost as much as our cb advocate in Pa.'s do.
He didn't start using the cotse addy until they bumped his "dweebo"
name. I figure that is his silent salute to them and an effort to make
someone think he is still with cotse. You see how much he screams about
not sending complaints to the correct addy and what not. It does do some
good though. Yes, the dog pile operates under the philosophy that they
can break any rules to enforce what they perceive as greater rules.
Check out how many services they lost. Ironic how they scream about
breaking cb rules but the AKC dog pile members have all had their
accounts yanked and all have scrambled to other ng servers and ports."

Hello And Good Morning,
If you can go to a local muffler shop have them
manufacture an antenna bar to fit into the stake
holes. Make sure that the put a flat bar setup
in the middle, then drill the antenna hole. Ground
the antenna bar well, to the bed and if possible to
the cab and frame, just make sure that everything
is grounded well.
I have done this on a couple of my trucks with
great results.

Correct,
My last set up, I had a neighbor that always left his
stereo on, but had the volume all the way down. I
came over his speakers with a Maco 5/8 antenna
50' in the air, rg213, uniden pc33 stock w/stock mic,
low pass filter, everything grounded. I even put caps
on his speakers, that reduced some but not all the rf.
He bought a home and moved out. The new neighbors
were our friends, and low and behold no more problems
over speakers.

I agree with Jay, but prefer the rg213. The Lmr400
is good coax, but can be a little costly depending on source.
Also, unless you are going to run watts, the rg213 should
do you just fine.

But Leland, if you look at what's being said in
here..... talking, possession, admitting, pictures,
anything other than absolute legal is considered illegal.
By Aaron's standards, just that picture alone would
be enough evidence of him operating illegal, at the very
least promoting illegal activity with a ham radio.
But I have 3 2950's, 2 2510's, Magnum 257,
10 amps, but not an antenna on the house or truck,
so does that make me illegal? Of course not. But I would
say with the evidence before us, he is operating illegally
and should be turned into the FCC for investigation, per
Aaron and his Hitler youth rules.

well voob whoever you are, you have been at this now for about a year
and a half.....and let us examine what good it has
done.....not one person had changed his ideas and beliefs because
of your self-annointed do-gooder campaign. but you continue to
pontificate.....a new year is coming up.....my question to you is
this.....are you ever going to get tired of doing this crap? yes or
no....

"This doesn't concern "him",

Now you're a mind reader as well? Looks to me like just another one of
your attempts to evade the discovery of the truth.

"It only "looks" that way to you because your vision is limited to the
end of your long pointy nose."

You twist and squrim like a worm on a fish hook, and will say anything
to keep from admitting you commented that nobody gets hurt by operating
on the freeband when you where debating the issue with Jerry.

"I claimed that indeed, for all intent purposes concerning the CB
freeband. Now that you have hurled a weeks worth of insults, showed your
growing weaknesses, and come full circle back to the gist of the matter,
you still have not produced one media link to refute what I said. It
only took you a week of twisting and squirming and saying all types of
things to avoid backing what you claimed. Like always, the instances are
limited to personal testimony with no real truth in foundation evidenced
by not a single case recorded anywhere but in the memory of some. Oh, it
may have happened a time or 2 in the 70s or 80s, maybe even a time in
the 90's but you claimed it happens, is happening, and cbers are being
busted for it. I maintain it's not and that you are slinging BS as
usual. the closest you can come is a warning letter and even the
majority of those are to hammies."

whoever he may be.
His name is Phi Kane, and I even posted his E-mail address once to save
you the complex task of looking it up on QRZ. Of course I must have used
his name at least 3 or 4 times in the various posts you keep responding
too. Looks like your short term memory is failing. You know that short
term memory problems are caused by the use of Lithium salts used to
treat Bipolar disorders like yours. You need to go back and get your
level check by having that shrink friend of yours schedule a blood test
appointment for you.
--
"You will have to do better than that. If you want to drag another
innocent into the fray like you tried to do with Jerry, you will have to
do it on your own or get someone that actually takes you seriously to do
it. What else can you offer up other than the failure to produce? At
least you stopped using phrases that made you sound like you were
reading words off a teleprompter while speaking to an audience."

Everyone knows amps on 11 meters are illegal. So what? So we have the
holier-than-thou schmoes out there trying to convince us that we ought
to change our ways. Look, I,ll make it real simple 4 u self appointed
cops and monitors or whatever the hell u refer to yourselves as. We know
the risks, if we take the chance, most of us are ready to deal with the
consequences should the heat come down. I have respect for MOST hams,
but I achieve the same results at a fraction of the cost. If I bleed a
neighbor, all they have to do is knock on my door. We will work it out.
I have been in the same area for quite some years and have no problems.
If I am not hurting anyone, why the hell should you care WHAT I do? The
bottom line is you shouldn't. Get a life. You guys that bitch about us
freebanders and "peaked" radios have way too much time on your hands. I
don't need to run anymore than 30 watts where I am located and I talk
all over the world......yes.. on the freeband. Nothng pleases me more
than one of you cb rambos to come in to my conversation and start
preaching about rules. God, I love to squash you suckers.
Gettin'
WAY-UP from the sandpile

"Whatsamatter AA? Feeling left out? Need some attention from uncle
Twist? Someone slaps Dogie for being stupid, Lelnad jumps to his
defense. Lelnad is drowning in a sea of ignorance and you come running.
Anyways, thanks for the trip down memory lane. It was you I dropped
that 30 watt maul on a few weeks ago, wasn't it? You were acting like
Lelnad. No biggie. I knew it was one of you 3 by the language and
references to the group. I didn't really think 'Nad would use his own

call though, I thought he'd use mine like he put in his forges. Come back out and play this weekend. I love squashing you rambo preacher suckers. STILL, gettin' up.....from the 'pile."

Source record: 104344

: rg 213 is a good choice of coax, it won't break the bank and the difference
: compared to the others is negligable.. There are 2 coaxes needed , 1 is for
: the vertical part of the antenna which is good for local talking, and the
: other is for the horizontal side which is good for talking skip. Get it up
: at least 36 feet and it will work great.

I prefer the horizontal plane as much as possible, mucho less noise...
Most people are set up with at least vertical polarity. It takes more than
10 minutes on the roof to put up a horizontal polarized antenna, but it's
well worth the trouble.

cheers
skipp

That is easy to answer, and welcome to "rec.radio.cb" where you just fell victim to a forged news group message. You'll find that is a VERY common occurrence here, and when the CB pirates get mad enough they pull the stunt in other newsgroups as well. Sooner or later if you like me and several others voice your opinion against illegal CBer's you'll find yourself a victim sooner or later too.

By the way any post from me will NEVER contain a valid return E-mail address, to me, as an anti Spam measure. The forged messages contain them as a sorry attempt at harassment. In fact when the forged messages do contain a valid E-mail address to me it saves me the trouble of looking for the forged messages. I don't ever bother to look for them anyway. Others find them and contact me instead, and I just pass along the message with headers to the forger's ISP, which then either blocks their access or cans the account. Takes about 2 minutes using a saved boiler plate message I send to the ISP involved.

5341. I need some help people

Newsgroup: rec.radio.cb
Date: 2001-11-15 18:03:38 UTC
From: Dean <charger@gower.net>
Message-ID: <3BF4037A.7FC5653B@gower.net>
Source record: 104355

If anyone knows of a place that is hiring in either radio sales and service or website product photography, please let me know as soon as possible.

EEI has just informed me that they can no longer afford my services and has let me go. Looks like it is going to be a great Thanksgiving and Christmas for me this year.

Any help would be appreciated. You can leave a reply here, or email me at charger@gower.net

I will check back in as often as I can.

Thanks

Dean

Well, just to fill you in on a little bit, those muffled voices are most likely people talking on SSB (Single Side Band), a transmission mode your Hand held unit doesn't have.. Because of this, there is no way for you to clear up those particular people... If someone were to talk on regular AM, then you would hear them just fine.

Power House

"On the contrary, let's examine what transpired. You tried to get me in
an argument with Jerry to get me to stop shining a light on your
pathetic tactics, you tried to get me in a hammie room countless times,
you tried bringing up my article yet again, you forged another email and
attached my name to it with no headers and now you're jumping up and
down hopping mad because someone forged you? Why would anyone need to
forge you? You make enough gut wrenching, intellectually challenged
statements on your own. You had someone's account pulled. Why would
that bother me? You already tried that with mine and failed several
times, remember? Even went as far as to say you had me canceled. You
were wrong then and you're wrong now. You're not well liked here, 'Nad,
in case you haven't noticed, it's just that I am more vocal than most of
the others concerning your games. If someone wants to forge you, well,
that's your problem and it's your right to do what you have to do to
stop it, but crying to me isn't going to do didley. It's you and your
two anticb lackeys that had your accounts yanked, and it's you who are
always upset with someone. Look at yourself..so screwed up you're up all
night, lose your ISP's, your job, your newsgroup servers, and lay in
wait for me in the morning to hurl more garbage. You already admitted
your reasoning for acting the way you do is to "bug twisted' even when
you were asked to take your personal garbage to email by myself and
others. Everyone knows your number 1 priority in life has been knocking
yourself out trying to "bug" me and man, you cover alot of ground in no
time, but as everything else you touch, like the Midas effect in
reverse, turns to fecal matter. Anything after that drunken admittance
is BS."

First off, congrats to Sideband on his Extra. How did this thread get turned into a squabble between Leland and Twistedhed & Landshark? And how did MY name get dragged into it? Yeeesh!

Let's see what Landshark has to say:

> But Leland, if you look at what's being said in
> here..... talking, possession, admitting, pictures,
> anything other than absolute legal is considered illegal.

Oh come off it Landshark. No one has slapped the handcuffs on you or anyone here. There have been no arrests. No warnings. Just COMMENTS. Comments that YOU could either read...or killfile or ignore. Your choice. If merely the MENTION that such and such transceiver or amp violates FCC rules gets your feathers ruffled, then you are waaaayyy too sensitive.

> By Aaron's standards, just that picture alone would
> be enough evidence of him operating illegal, at the very
> least promoting illegal activity with a ham radio.

You know that's pure BS. You are acting like a kid in school who gets caught cheating and then complains "the teacher is a nazi".

> But I have 3 2950's, 2 2510's, Magnum 257,
> 10 amps, but not an antenna on the house or truck,
> so does that make me illegal? Of course not. But I would
> say with the evidence before us, he is operating illegally
> and should be turned into the FCC for investigation, per
> Aaron and his Hitler youth rules.

10 amps? You have 10 illegal CB amps? Why????? What possible use could you have for such things? Putting them on the air is illegal. Selling them is illegal.

The way it sounds---- he's questioning why there are -2- SO-239 connectors... not the type of coax to use.

This antenna has BOTH a vertical & horizonial polarzation...

You run -2- pieces of coax to a switch box to allow you to go from vert to horz

If you want you can just unplug the coax and plug the other in... you can also get a mast mounted relay to switch between the 2 also, then you would run one coax & a power wire to control the relay above.

NOW- the rest of you can go from there.

Licensed for what? To look for CBers in a CB newsgroup who can help
him make mods that enable his CB to transmit out of band?

Dick, why is it so important for you to jump in here with a
pre-emptive strike to defend this guy seeking "frequency expansion" of
a CB radio? Don't you listen to lower 10 meters and hear the CBers
transmitting there? Can't you make the connection between "mods" being
promoted (by hams or anyone) and people getting the idea it's OK to
ransmit there? Or don't you give a damn anymore?

> But Leland, if you look at what's being said in
> here..... talking, possession, admitting, pictures,

I'm well aware of what is going on here. First what you so quickly forgot is the fact that N8 is a "Ham", and regardless of what you may think of him personally, as a Ham he can do whatever he likes with radios so long as he does not violate FCC rules. On the flip side CBers have no such protection. So when a CBer is found to be in possession of equipment illegal to operate on 11m anyone can very legitimately question what use has been made of such equipment. In fact even the FCC will assume a CBer has used an amplifier if one is found, and it need not even be hooked up. It's icing on the cake when they do catch them red-handed, but it's not required.

Now to return to N8's case, even IF his rig was modified he still has not broken ANY FCC rules until he uses that rig to transmit out of band. That's why you have to catch him, and prove it. As long as his rig is used to only transmit on the bands for which he is legally licensed the FCC could care less. The simple fact the rig could be modified is not of interest to the FCC, but the use of it is. The same can't be said about CB radios. The FCC is VERY specifc, NO MODS. This is one of the very real differences between Hams and CBers. As Hams the FCC has granted us a very wide range of things we can do with radio equipment, legally.

Now about the other issues, at some point in time or another just about every illegal operator on this group has admitted to illegal operations of one type or another including posting pictures on a web site, and bragging about it like Tim. It's pointless to protest otherwise because all you have to do is a search on yourselves to prove the point, and you know who you are so I don't need to mention names. So if you have admitted to illegal operations you're stuck because you're guilty by your own admission. Just remember Twisted's jock strap post, he'll never see the end of that until the day he dies, and may not even then cause I'll bet somebody there will remember it from here and remind him. 8-))

Everyone knows amps on 11 meters are illegal. So what? So we have the holier-than-thou schmoes out there trying to convince us that we ought to change our ways. Look, I,ll make it real simple 4 u self appointed cops and monitors or whatever the hell u refer to yourselves as. We know the risks, if we take the chance, most of us are ready to deal with the consequences should the heat come down. I have respect for MOST hams, but I achieve the same results at a fraction of the cost. If I bleed a neighbor, all they have to do is knock on my door. We will work it out. I have been in the same area for quite some years and have no problems. If I am not hurting anyone, why the hell should you care WHAT I do? The bottom line is you shouldn't. Get a life. You guys that bitch about us freebanders and "peaked" radios have way too much time on your hands. I don't need to run anymore than 30 watts where I am located and I talk all over the world.....yes.. on the freeband. Nothng pleases me more than one of you cb rambos to come in to my conversation and start

preaching about rules. God, I love to squash you suckers.

I think both Sideband and I have made our feelings known on this bunch. BTW a far more appropriate penalty would be listening to a 6wpm random cassette for 92 continuous hours.

So far all they have done is make a lot of childish incessant noise which you can protect yourself against should you choose. Whatever else it may be, a newsgroup is not real radio.

5373. Reception distance

Newsgroup: rec.radio.cb
Date: 2001-11-16 00:40:00 UTC
From: Jim Murray <JMurray10@cfl.rr.com>
Message-ID: <AfZI7.48013$Yb.14002120@typhoon.tampabay.rr.com>
Source record: 104386

I have a Cobra 18WXST with a 108" stainless whip on my truck tool box. I have had the unit over a year and have always suspected I do not get the range of other CBers. my SWR is 1.5 on channel 3 and 1.3 on channel 19. Today I ran a test with two friends by using channel 3 and one of the friends acting as a base from his truck. The other friend and I drove off and both of us lost reception at 2.6 miles in a rural neighborhood. The truck acting as a base uses a 108" whip and the other truck with me uses a magnetic mount. All radios were set at maximum squelch and we just put up with the static. Under these conditions should I have greater reception distance than the magnetic antenna and should either of us have done better than 2.6 miles?

Thanks, Jim

Assuming the channel was quiet (I gather it was by your post), you should get a LOT more distance even if running 1/10 of a watt. Rule of thumb (for flat, level ground) is double the height of the antenna in feet, then take the square root of that number and you will have the distance (in MILES) to your radio horizon. As long as your and the other station's radio horizons overlap, you should have communications (this ignores skip - this is low power line of sight stuff). Assuming your antenna is 5 feet high (probably more, but just for sake of argument), you double the five (giving ten) and then take the square root of 10. This give you over 3 miles to your radio horizon. The other truck will also have over 3 miles to his/her radio horizon. This means you should be able to communicate over flat land for over 6 miles. For the record, on my handheld (running all of 2.5 watts!), I've used line of sight repeaters well over 50 miles away! Although your SWR sounds good, remember that a good dummy load will give you a 1 to 1 SWR virtually anywhere (and it is not supposed to radiate). A resonant 1/4 wave vertical over perfect ground will give you a 1.6 to 1 SWR or so since its' radiation resistance is actually in the mid 30 ohm range! With a poor ground, adding say 30 ohms of resistance, your SWR will check better (now you'd be at 60 ohms), but half of your transmitted (and received!) signal will be lost in the poor ground. This may or may not be your particular case, but you should get a HECK of a lot more than 2 or 3 miles!

Or hows about new neighbor with a different length of speaker lead so they
don't resonate on 27 mhz, like the first, come on !

My implication was this:

N8s radio is tuned to a CB frequency because of one of three reasons.

1. He is looking to increase his radio knowledge. (likely)

2. He believes that this channel is the gay hangout and is interested.
(very likely)

3. Just happened to snap the picture while the radio was scanning
through 11 meters. (hardly likely)

Jim, hopefully someone else in this group will give you some pointers
(especially if any of them went through what you are going through).
Interesting stuff, RF. What may be a good dc ground may not be a real good
rf ground. A strap may help; again, it may not. About all I can honestly
say is that you SHOULD get a lot more than 2 to 3 miles on a quiet channel.

73 from Rochester, NY

With quiet conditions you should get much farther.

What was the threshold S-meter reading, zero?

Can you run this test by stopping the engine to eliminated some
of the static?

Real HAMs don't act that way. Both fortunately (for the band) and unfortunately (for the situation). I'd lose my license if I did such a thing and got caught, and I fought too hard through dyslexia and ADD to get to where I am. It's a prize I'm not wont to give up so readily.

I am, however, a firm believer in Karma; that is to say that they'll get what's coming to them, regardless of what I do or don't do. What comes around goes around. Eventually they'll get theirs.

Until they break the law or the FCC rules, there's nothing I can do. If you think you can do something, you're welcome to try, but note that you alone are responsible for your actions.

Mopar:

Actually, he's right... Unless you pull the diode, the radio will not transmit outside of the HAM bands. Period. I know, I own one. It's modified, as well. Is it used out of band? Absolutely not.

Why is it modded, then? Easy. Emergency situations arise in which I may be required to transmit out of band. I've been called on to use my equipment as a temporary repeater for the local ambulance service once already. That would be illegal, were it not an emergency situation.

Jim,
Sounds about average to me. Depending on propagation, activity on
the channel, etc, minimum range can vary by a very large margin.
Using the formula quoted in another post, and assuming the 'fixed'
antenna was something like 4-5 feet off the ground, that makes the
distance to the horizon about 3 miles (assuming flat ground with no
obstructions). That's about the same as the distance you were getting.
The assumption that power makes no difference is wrong. The amount
of power required depends on a lot of things including the efficiency of
the antenna, receiver sensitivity, and ambient noise. In some cases
1/10 of a watt may be enough, and then again, in other cases 10 watts
might not be enough.
All in all, if you were in a suburban area, 2.5 to 3 miles just ain't
bad...
'Doc

Agreed, I was there, and having a great time.
I warned then that running that much would ruin
the antenna, but never thought it would catch on fire.
I was on a deck of a top floor apartment and of course
they were jabber jawing. well no one noticed the SWR
rising, next thing you smelled burning plastic. I looked
out side and the dam thing was on fire. I pert near
died laughing, I kept warning them not to run
so much through it, but they wouldn't listen.

I hope you have an exception to transmit out
of legal band? Otherwise you could lose your
radio. There was a case in San Diego where a
ham was out hiking and used a modified handheld
to broadcast on police freq for someone that had
broken there leg quite severely. They rescued
the person that was hurt, the police thanked him,
then the FCC promptly confiscated the radio, attempted
to fine him for operating a modified radio out of
band. He won the case for transmitting out of band,
but lost the radio, because they said it was illegal
because it was capable to transmit on police freq.
I'm not trying to flame you, I'm just trying to
warn you to be careful.

My point was, and of course they twist it
to suit there own desires, not needs.
Was just because I have an amp, discuss it,
talk about it doesn't make it illegal. They have
accused a lot of people about this very subject
that Doug's pictures invoked, so we can go
about the same tactics that they want too.

Landshark

PS, how did you like my latest hero?

Partially right,
He did have an older receiver, but the speakers were
of high quality, but of older age. The main problem was,
that he kept the receiver on but volume down, that's
like having a big antenna next door. I tried to explain
to him about leaving the receiver on, but he said he
had to, due to a problem on the receiver.
The new neighbor had a newer receiver, better
speakers, way better speaker wire. Never had a problem
until I put around 1500 watts in-line one night.
Then and only then was I bleeding over the telephone,
but not the stereo.

Correct, he can mod one, you forget, I was a ham at
one time too, so I'm well aware of the rules.
He still can not transmit at all between 26.965
to 27.405 with that radio. Pictured was that radio,
mic plugged in, so he might be using it in that matter
correct?

>On the flip side CBers have no such protection.

Very unlikely, they would have to have collaborating
evidence to back them up, that is usually the case
99% of the time.

> Now to return to N8's case, even IF his rig was modified he still has not

> less.

Same goes for a cb'er, you would have to be caught,
just an accusation alone is not evidence enough.

>The simple fact the rig could be modified is not of interest to the
> FCC, but the use of it is. The same can't be said about CB radios. The FCC

>admission.

Correct by our "Own admissions" means squat to the FCC.
They will have to catch you, just like if they caught Doug
transmitting out of band on a rig not allowed on cb.
That pictures says more than a thousand words, that he
has it set up to transmit on cb, and "might" transmit there
with it. You can try to defend it all you want, but if he
has it set up there, chance's are he use's it.
Aaron (whoever) and others here had whined and cried
all about pictures showing just amps (not adds) Radios
(Not adds) explaining how they are showing off their
new purchases. They are criminals and lawbreakers,
they never said they weren't hams, but that didn't matter,
all that mattered was to whine about it. But here is a
picture of Doug's radio, on a cb freq, mic plugged in
so I would say that pretty clear evidence.

We in Livingston County work closely with law enforcement and emergency agencies. They know we have equipment that's capable of transmitting on their frequencies. They also know they can rely on us if their equipment goes down. When it does, a local communications emergency is declared, and that covers our butts.

No, I won't lose my 706, or my AR-135, or any of my other gear, for doing this... especially when the local communications agencies ask us to do it.

The FCC field agent(s) who confiscated that other guy's radio were wrong, and admitted so, after the radio was destroyed, of course. I remember reading this story a few years back. The FCC agent(s) was (were) wrong in that case.. probably due to piss poor training and lack of knowledge of the rules.

I appreciate the warning, but it is unnecessary, in this case.

You want to see "Big Numbers"? How about a $10,000 fine?

PS> Why not just buy an illegal amp from Landshark and dismantle it
for parts? He says he has 10 or so just sitting around he's not using.

It probably can. That is 500 watts of Ancient Modulation. Pretty much in
the ballpark that was mentioned

Correct. Amateurs are not allowed to use spectrally dirty equipment.
As a matter of fact, RF amplifiers used in the amateur service are
required to meet the same emissions standards as any other piece of
transmitting equipment. The amplifiers used on CB equipment, however,
since they are illegal, do NOT have to meet any standards. As a
result, they often turn out to be spectrally contaminating and a cause
for RFI and TVI when they are used.

The amp has no way of knowing, but that doesn't keep them from
splattering their signal across the band and interfering with devices
from legally authorized radio equipment to TV's.

I see the correlation between IQ and wattage applied MAINLY to CB
operators, however I will admit that the same phenomenon DOES seem to
occur in certain circumstances within the amateur radio service.
Possible spillover effect, but the results of extensive study have not
yet been released. Suffice it to say that many amateurs appear to be
immune to this syndrome, but not all.

I was not. I was referring to CB operators. Granted, many CB
operators are also licensed amateurs, but the distinction here is that
when they've got the CB mike in their fist, they (as we all do) are
not amateur operators, we are CB operators...

> Thanks, Jim

A number of things come to mind. First off, your range should be better.
Typically, depending on terrain, a legal power mobile CB should be able
to communicate with another mobile, for at least 5 miles. Much more if
both are on the top of "hills". The fact that you compared range with
another user, sugggests that there is probably not much wrong with your
setup. The best place for an antenna is usually on the top of the roof.
The toolbox is behind the cab, and can cause some reflection in the
signal, but it shouldn't be too bad.

How high was the noise level. We're in the middle of what is called a
"skip cycle", where longe distance communications are possible. The
result of this is many stations (many running high power) pile up on
each other and generate a ton of noise. Also, you may have an ignition
noise problem. If you have a steady meter reading of S7 or higher, shut
off the engine. If the meter drops, you have an ignition noise problem.
If the meter stays high, it's an atmospheric or skip noise problem. With
high noise, you will not get good range, as the other station will drop
down into the noise level at a shorter distance. There isn't much you
can do about the skip except wait until it fades (which is usually at
night). Ignition noise can be corrected by suppressors on the spark
plugs, alternator or fuel pump. It's not always easy, but it can be
done. It might be better to allow a pro to do it, if you're not up on
the tricks.

I know scanners; I know this one doesn't cover 25-1300 MHz. There's a
gap at 600 to 800 MHz. Good scanner though (I own one).

It wasn't my equipment, I was just over at their apartment for the
entertainment.I wouldn't run more than 500 bird dead key, any more than that
you are pushing the power limits of the antenna.
I have run a Messenger 1200 through one, but that really
isn't more than 1kw at the most. I wasn't running at more than
800 because I drive it with only 6 watts dead key swinging
to 17.

Congrats sideband. Are you actually putting that Morse to use? If so, how do you like it? Take care and 73.

(GASP!) Landshark, ya mean to tell me that because I was listening last
night on channel 8 with
my IC706 I am "guilty" of something? LOL! Mike was plugged in and
everything. (GASP!) Hey,
I do a lot of shortwave listening with the mike plugged in, but I don't
transmit. Y'all 'r makin' me
paranoid! <<g>>

Take care,

Jerry

        But Leland, if you look at what's being said in
here..... talking, possession, admitting, pictures,

--
I'm well aware of what is going on here.

"You haven't a clue what is going on anywhere..if you did, you wouldn't
be so angry all the time at people that have nothing to do with your
problems. Honestly Lelnad, you're like a child that won't take
responsibility for their actions. You blame everyone around you for your
problems and attempt to portray yourself as a victim. Your cries for
sympathy fall on deaf ears, Lelnad. You're known too well."

or you would notFirst what you so quickly forgot is the fact that N8 is
a "Ham", and regardless of what you may think of him personally, as a
Ham he can do whatever he likes with radios so long as he does not
violate FCC rules.

"You're just pissed because you were mentioned as being the first to
scream the loudest when
someone was taking N8 to task, and on cue you interjected and played
wanna-be lawyer."

On the flip side CBers have no such protection.

"What does the "flip" side have to do with it? Nothing..just another
poor attempt in a long line of deflections when cornered."

So when a CBer is found to be in possession of equipment illegal to
operate on 11m anyone can very legitimately question what use has been
made of such equipment. In fact even the FCC will assume a CBer has used
an amplifier if one is found, and it need not even be hooked up. It's
icing on the cake when they do catch them red-handed, but it's not
required.

"Can you tell us the last time this happened? Can you cite a single
reference where the feds entered a private citizen's home for working
illegal 11 meter and found an amplifier?"

Now to return to N8's case, even IF his rig was modified he still has
not broken ANY FCC rules until he uses that rig to transmit out of band.
That's why you have to catch him, and prove it.

"How many of us that you call names in here did you "catch" in the act of being illegal?
What's that? None? Why, I believe that would render all you say about worthless, now."

As long as his rig is used to only transmit on the bands for which he is legally licensed the FCC could care less. The simple fact the rig could be modified is not of interest to the FCC, but the use of it is.

"The simple act that we may choose to be illegal is not of interest to the FCC. The simple fact that we have rigs that are modified is no interest to the FCC, but the use of such items, in the distant future, may be."

The same can't be said about CB radios.

"Sure it can. I just demonstrated how but you have a problem applying the same set of rules to everyone. You have had such a hard on for cbers ever since your arrival."

The FCC is VERY specifc, NO MODS. This is one of the very real differences between Hams and CBers. As Hams the FCC has granted us a very wide range of things we can do with radio equipment, legally.
Now about the other issues, at some point in time or another just about every illegal operator on this group has admitted to illegal operations of one type or another including posting pictures on a web site, and bragging about it like Tim. It's pointless to protest otherwise because all you have to do is a search on yourselves to prove the point, and you know who you are so I don't need to mention names. So if you have admitted to illegal operations you're stuck because you're guilty by your own admission.

"Oh, but that contradicts what you said above. You said in order for one to be guilty you have to PROVE it. We don;t all believe everything we read on usenet. Why are you more inclined to believe posts on usenet as opposed to a contents in a magazine like Popular Communication? It's not surprising you do that, just weird, man, weird."

Just remember Twisted's jock strap post, he'll never see the end of that until the day he dies,

"Probably not. For some unknown reason, you
regularly somehow pleasure yourself to your own old posts and in doing so, repeat yourself, manifesting as a stutter. We find your redundant behavior nothing more than the similar act of an animal when cornered."

and may not even then cause I'll bet somebody there will remember it from here and remind him. 8-))

"Does that rank right up there with when you said you could arrange for N8 to come back and harass the group with porn and obscenities, then made good on it?"--

>73,1175

Hey 1175,

Ditch the Antron AND the amp idea and grab a nice beam antenna, i.e. a yagi (Maco or Cushcraft) or a quad. (Maco V-Quad or the PDL II that's for sale in another thread) Use really high quality coax like LMR400 or 9913, a low pass filter, and you've got a winner w/o the amp. That was just a friendly suggestion, not a sermon. If you have your heart set on that amp, you'll need something beefier than the Antron. Please do grab a good low pass filter and rf ground the entire system well. Good luck. Take care and 73.

Mark

other than absolute legal is considered illegal.
        By Aaron's standards, just that picture alone
would be enough evidence of him operating illegal, at the very least
promoting illegal activity with a ham radio.
          But I have 3 2950's, 2 2510's, Magnum 257,
10 amps, but not an antenna on the house or truck,
so does that make me illegal? Of course not. But I would say with the
evidence before us, he is operating illegally and should be turned into
the FCC for investigation, per Aaron and his Hitler youth rules.
-
Good point Shark,It's a damn good thing Leland will never be a judge
though.
He's been quoted to say "shoot CBer's in the head,if they operate out of
band or power restrictions".
I guess that's why him and his kind still exist here,sorta like the
anti-Christ.

>You're the second person that said the links don't work, but I just
>used them with no problem. Perhaps it was a transient problem?

You're right, I just pulled the up the page. Not a speedy loader, but it works. These are good units as they usually make mincemeat of the kilowatt club.

>I've read about the ARF 2001 in the old EMTJ (Eleven Meter Times &
>Journal) and it's receive capabilities were highly touted. Never had
>the pleasure of hearing one perform though.

The ACR was better than the 200GTL "on test equipment" but likely imperceivable to the human ear.

>I too had (have) an
>AR-3500, but without the Channel Guard. It still ranks as one of the
>best "receivers" I've ever used.

Don't EVER let that rig go. Probably the best 10m rig ever made. Alright, maybe a tie with the Uniden/President HR-2510/Lincoln...maybe?

>I did have one in my Cobra
>148FGTL-DX+, but this is an EPT6900-10Z board. I'd say the receive was
>good but not great.

Pack that one away too. They're not making them anymore and in actuality, they were never meant to be. A slip-up of sorts by the folks at Cobra.

>> P.S. Don't think that I missed the fact that you (conveniently) left out a
>> link in your receiver chain. ;-)
>
>Missed what? O;-)

Lucky S.O.B. ;-) Take care and 73.

Who said anything of the sort? Heres the bullshit you posted. No mention
was ever made of anything re: newsranger other than Leland and he nor I
ever said a newsranger account cannot post here are you dense stupid or
stoned? You then turn it into asking twisty if he is on newsreader.com
when no one even mentioned the word newsreader. Which part don't you
understand. I draw you a picture.
Are you new to this group ?
Or was it you who got Newsranger spanked here ?
--
  If you are talking about something that happened in the past I
don't know then I haven't been here that long.

Start here and use a true mobil rig.

http://www.cbworldinformer.com/200108/magnum_power_filter.htm

A true mobil unit will likely offer you an ANL and/or NB circuit. (Although the NB might not help much against ignition noise.) Then you can use the walkie talkie on the go. Good luck to you, PB. Take care and 73.

Actually, Mark, I have yet to make a CW contact on any band. I barely passed the 5 WPM code test. I'll admit it. Dyslexia is a bitch sometimes. This is one of those times...

I'm spending most of my time in the digital modes, but when I'm on the radio, and not on the HAM bands, I'm on CB, too. I still like to chat, so it's all good.

I had one of these amps. It worked great and never had a complaint about tvi
but I never saw it do 500 watts. With a un-modulated carrier it max out at
350 watts on a mfj directional watt meter. On a good bird meter I bet it was
closer to 300 watts.

Who r u ?
I'm from israel and all that u r saying make us sound like the bad guys
because we are big and they r small.

I'm from Israel and i'm telling u.... WE CAN'T LIVE HERE!!!!!
I can't go out to the street without being afraid of a bomb or shooting!
terrorism is everywhere!
dont u think we want peace ?
you think we love this? Who would choose this?????????????
if some1 would promise that giving back teretories will help, we would give
it up!
but arafat already signed a lot of agriments with us and lied.
You can see that if we back off a little from guarding their cities they
send arabs to explode and kill us!
What would you do ??????
what?????????

All we want is to live.....
to go out from our home and know that we'll come back...
to go skydiving on weekends...

Blue Skies
Dan Mordechay
A-37509

P.S
Camp David didn't help too...
and not our fault...

Are you saying it will receive 600 to 750 MHz? I don't think so.

I don't doubt that it receives 800 t0 900 MHz.

5473. CB antenna radiates on the FM band

Newsgroup: rec.radio.cb
Date: 2001-11-16 21:04:37 UTC
From: fgillil@tincan.org
Message-ID: <e182e02.0111161304.2511e1b2@posting.google.com>
Source record: 104486

I just got done troubleshooting an RFI problem and the cause was the antenna itself. It's one of those fiberglass/helical jobs. The power was a legal 4 watts but he was spreading noise for almost a full city block on the FM band. Even a LP filter didn't help.

It turns out that the antenna was the problem: the top-loading section is self-resonant at 91.7MHz with a 3.5MHz bandwidth! I don't know who manufactured this piece of crap, but in case someone can identify it, it's 61" long (less threads), the bottom helix is 43" and the top winding is 15" long. I can't help but wonder if there are other antennas that show self-resonance above the intended band.

P.S, keyclowns should NOT stop using this antenna if they have one, as it's use means a better chance of them getting busted.

Sparky:

Good advice here.. Another cause of the RFI might possibly be that the radio is creating harmonics that the antenna was able to radiate efficiently because it had a resonant part at that frequency. It might do the user some good to put the radio on a spectrum analyzer and tune out the harmonics the radio is probably producing. A clean signal from a transmitter shouldn't cause radiation on frequencies other than those transmitted, even if a part of an antenna is resonant elsewhere. RF doesn't change frequency just because the antenna is resonant elsewhere.

> 73,1175

With those specs, the rig in its entirety is one filthy mother.

There are more power figures floating in this thread than Carter has of the proverbial Little Liver Pills. Let us try to make some sense out of them.

RMS Power: This is the measurement that makes AC and DC equivalent for heating the outhouse. It is where all discussion begins. Your house is 120/240 RMS, most things are RMS outside of stereos and CB amps.

Peak Power: On a sine wave, the average (RMS) voltage is .707 of the peak. So the peak is 1.414 times the average. Anyone recognize the square root of 2? If the current goes with it, then the peak power is twice the RMS. Not of giant interest unless you are highbinding a CBer or designing capacitor-input power supply filters. Kind of useful when selecting diodes for a power supply as well, peak reverse voltage means exactly what it says.

Peak envelope power RMS: Here is where the fun begins. SSB cannot really be measured any other way. It is the peak RMS power output of an amp and is the basis for the 1500 limit on the ham bands. What a peak reading output meter is in fact reading is a mystery to me. I know this is what it should read but ????

So when people in the group start talking about 'It'll take 2kw PEP" and 'It'll blow up above 500', they are both right.

Incidentally, AM classically is done on a tube with a 'square law' set up. In other words, doubling the plate voltage should also double the plate current which results in the PEP of an AM transmitter being four times the carrier-only power. No matter what the device(s) used this relationship should hold for a 100% modulated signal. Without going into the math, the RMS power is 150% of the carrier. So when a 900 watt carrier becomes 1600 under modulation major shit is happening. I suspect that the ratio would come closer with the installation of a good lo-pass filter and further approach sensibility if the drive and modulation levels were kept to reason. Talk power would improve if the limiter were re-installed. Might only read 400/600 but I will blow your doors off in a pile-up; the only trophy you win is the meter-reading award.

Deadkey: Same as carrier-only or A0 but sounds kewler.

Swing: A word invented by someone selling a CBer a dead cow. Based on the totally ridiculous idea that everything between 'deadkey' and 'balls to the wall' is - wait for it - AUDIO.

Dick N&#65533;BK

: closer to 300 watts.

You are right on track. The Skipper 300 will do from ~300 to about ~350
clean rms watts with normal drive. Tube life, type and quality
make a big difference.
Over drive equals a wider signal... the undesired type of power.

I see them on Ebay quite a bit.

cheers

YOU TELL THEM, CHUBBY CHECKERS (THE "twist" man) ! ! ! !

I don't have the luxury of you liberal welfare check grubbin' commies out there, I have to WORK for da livink, and only get on OUR CB newsgroup when I have the time. This is actually a venue for preaching CB, Jesus, the LAW, Americanism, anti-communism (got dat, N8?), and every other thing that disgusts us, like Harry Potty (see my post tonight on this one)!
I'd like to PHONE that scronny drug filled anti-Chrysler man next week when I get up to slaveland, but he can't seem to e mail me direct so I can get his phone # there OR I give him mine. I guess he thinks I'm related to N8 or knows that I prefer GM to Lee I-a-caca's Dimeler Anti-Chrysler junk that I'll never buy another one after my '66 Plymouth! I had a '76 Fury too but I don't know when. So scronny, E mail me direct with yo (216) or (440) # and I'll send yo my # there so we can talk locally on the N8 6th plank approved LAND LINE ! Give me a REAL e mail address, not a pencilnecker geek illusionary one that certain WIMPS out here hide behind! ! !
Dave!!!!!!!!!!!!!

"Twistedhed" <twistedhed@webtv.net> wrote in message news:23080-3BF5452B-277@storefull-124.iap.bryant.webtv.net...
From: joxendi@bellsouth.net (Jerry Oxendine)
Hehe, I've also noticed that when one challenges Dave, he becomes strangely silent.....

"Hello, Jerry. I think Dave recognizes the idea that this is nothing more than another venue for entertainment anymore and treats it as such. I'd rather see his posts than the incessant whines and moans from losers that do absolutely nothing with their lives other than dwell here and dream about the rest of us. Wait till Sunday and ask your question again..<g>. Have a great weekend."

5488. HARRY POTTY ! Buy CB's instead !!!

Newsgroup: rec.radio.cb

Yep, save your $$$ & buy more CB's. The Bible says that we are NOT suppose to suffer a WITCH (or Warlock) to live. The government is suppose to REMOVE them from the land.

So the drug head filled liberal media has filled your head on how wonderfull Harry is, read the Bible to see where GOD will send him.

Like my gas station repair guy up north says, "NOW I know WHY we were attacked." How much more wickedness can a nation keep lapping up, before God finally pulls the plug! Don't waste your $$$ on the book or the movie. It would be better to buy a non-approved N8 liniker than waste it on the potty WITCHES !
Dave!!!!!!!!!!!!!!!

Arrronius:
You must not be very old, you hippy freq. commie pushin' long haired welfare check grubber! Don't you remember in da 70's that there were A LOT of Amateurs that were converting CB's to go on 10 meters to talk there pursuant to the 6th plank legally & Taliban approved (in 2001 lee-gal-ese)? Well I REMEMBER that they DID. Would your RED HIPPY Freq. neck yell at them too, mr. Rambo Hambo Hamateur N8 ? GET A JOB; GET A LIFE; GET SAVED; become AN AMERICAN; throw your communist card membership away like Elia Kazan did ! Get a HAIR CUT, commie HIPPY !
Dave!!!!!!!!!!!!
(IS this funny or what?) !

When you read the Bible, you get as close to reality & the real world as you can get. When you watch TV and Harry Potty, you go to La La land. When you go on the CB, you go on to the real world. When you go to college, you LEAVE the real world to get your brain washed by the anti-Christ Humanist religion that took over these former Christian institutions. Better put a CB in da '51, roll down the windows and go cruising to get that college brainwashing out, so you can see who is really away from REALITY !!!! Dave!!!!!!!!!!!!!!!
